

## Cornford House Nursing Home Risk Assessments

For many years, laboratory dogs have served as important animal models for biomedical research that has advanced human health. Conducted at the request of the U.S. Department of Veterans Affairs (VA), this report assesses whether laboratory dogs are or will continue to be necessary for biomedical research related to the VA's mission. The report concludes that using laboratory dogs in research at the VA is scientifically necessary for only a few areas of current biomedical research. The report recommends that the VA adopt an expanded set of criteria for determining when it is scientifically necessary to use laboratory dogs in VA biomedical research; that the VA promote the development and use of alternatives to laboratory dogs; and highlights opportunities for the VA to enhance the welfare of laboratory dogs that are being used in biomedical research areas for which they have been deemed necessary.

"This book identifies key issues in the relationship between ICT and law, ethics, politics and social policy, drawing attention to diverse global approaches to the challenges posed by ICT to access rights"--Provided by publisher.

Building on a series of ESRC funded seminars, this edited collection of expert papers by academics and practitioners is concerned with access to civil and administrative justice in constitutional democracies, where, for the past decade governments have reassessed their priorities for funding legal services: embracing 'new technologies' that reconfigure the delivery and very concept of legal services; cutting legal aid budgets; and introducing putative cost-cutting measures for the administration of courts, tribunals and established systems for the delivery of legal advice and assistance. Without underplaying the future potential of technological innovation, or the need for a fair and rational system for the prioritisation and funding of legal services, the book questions whether the absolutist approach to the dictates of austerity and the promise of new technologies that have driven the Coalition Government's policy, can be squared with obligations to protect the fundamental right of access to justice, in the unwritten constitution of the United Kingdom.

This book presents the current trends and practices in breast imaging. Topics include mammographic interpretation; breast ultrasound; breast MRI; management of the symptomatic breast in young, pregnant and lactating women; breast intervention with imaging pathological correlation; the postoperative breast and current and emerging technologies in breast imaging. It emphasizes the importance of fostering a multidisciplinary approach in the diagnosis and treatment of breast diseases. Featuring more than 800 high-resolution images and showcasing contributions from leading authorities in the screening, diagnosis and management of the breast cancer patient, Breast Cancer Screening and Diagnosis is a valuable resource for radiologists, oncologists and surgeons.

In *Science and Ethics*, Bernard Rollin examines the ideology that denies the relevance of ethics to science. Providing an introduction to basic ethical concepts, he discusses a variety of ethical issues that are relevant to science and how they are ignored, to the detriment of both science and society. These include research on human subjects, animal research, genetic engineering, biotechnology, cloning, xenotransplantation, and stem cell research. Rollin also explores the ideological agnosticism that scientists have displayed regarding subjective experience in humans and animals, and its pernicious effect on pain management. Finally, he articulates the implications of the ideological denial of ethics for the practice of science itself in terms of fraud, plagiarism, and data falsification. In engaging prose and with philosophical sophistication, Rollin cogently argues in favor of making education in ethics part and parcel of scientific training.

Written by experts from around the globe (USA, Europe, Australia and Asia) this book explains technical issues, digital information processing and collective experiences from practitioners in different parts of the world practicing a wide range of telenursing applications including telenursing research by professionals in the field. This book lays the foundations for the globalisation of telenursing procedures, making it possible to know that a nursing service could perform on a patient anywhere in the world.

Summarizes the science of climate change and impacts on the United States, for the public and policymakers.

For over 20 years, *HEALTH PSYCHOLOGY: AN INTRODUCTION TO BEHAVIOR AND HEALTH* has remained a leader in the field for its scholarship, strong and current research base, and balanced coverage of the cognitive, behavioral, and biological approaches to health psychology. Appreciated by instructors -- and accessible and appealing to a wide-range of students, including non-majors -- this classic text features a concise writing style, ample pedagogy, and numerous visuals. This edition is updated to reflect the latest developments in the field, and includes many new real-world examples selected for their interest and relevance to today's students. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

"These notes are about the process of design: the process of inventing things which display new physical order, organization, form, in response to function." This book, opening with these words, presents an entirely new theory of the process of design. In the first part of the book, Christopher Alexander discusses the process by which a form is adapted to the context of human needs and demands that has called it into being. He shows that such an adaptive process will be successful only if it proceeds piecemeal instead of all at once. It is for this reason that forms from traditional un-self-conscious cultures, molded not by designers but by the slow pattern of changes within tradition, are so beautifully organized and adapted. When the designer, in our own self-conscious culture, is called on to create a form that is adapted to its context he is unsuccessful, because the preconceived categories out of which he builds his picture of the problem do not correspond to the inherent components of the problem, and therefore lead only to the arbitrariness, willfulness, and lack of understanding which plague the design of modern buildings

and modern cities. In the second part, Mr. Alexander presents a method by which the designer may bring his full creative imagination into play, and yet avoid the traps of irrelevant preconception. He shows that, whenever a problem is stated, it is possible to ignore existing concepts and to create new concepts, out of the structure of the problem itself, which do correspond correctly to what he calls the subsystems of the adaptive process. By treating each of these subsystems as a separate subproblem, the designer can translate the new concepts into form. The form, because of the process, will be well-adapted to its context, non-arbitrary, and correct. The mathematics underlying this method, based mainly on set theory, is fully developed in a long appendix. Another appendix demonstrates the application of the method to the design of an Indian village.

Health at a Glance: Europe 2018 presents comparative analyses of the health status of EU citizens and the performance of the health systems of the 28 EU Member States, 5 candidate countries and 3 EFTA countries.

Based on recent research, this book discusses how to improve quality, safety, efficiency, and effectiveness in patient care through the application of human factors and ergonomics principles. It provides guidance for those involved with the design and application of systems and devices for effective and safe healthcare delivery from both a patient and staff perspective. Its huge range of chapters covers everything from the proper design of bed rails to the most efficient design of operating rooms, from the development of quality products to the rating of staff patient interaction. It considers ways to prevent elderly patient falls and ways to make best use of electronic health records. It covers staff interactions with patients as well as staff interaction with computers and medical devices. It also provides way to improve organizational aspects in a healthcare setting, and approaches to modeling and analysis specifically targeting those work aspects unique to healthcare. Explicitly, the book contains the following subject areas: I. Healthcare and Service Delivery II. Patient Safety III. Modeling and Analytical Approaches IV. Human-System Interface: Computers & Medical Devices V. Organizational Aspects This book would be of special value internationally to those researchers and practitioners involved in various aspects of healthcare delivery. Seven other titles in the Advances in Human Factors and Ergonomics Series are: Advances in Applied Digital Human Modeling Advances in Cross-Cultural Decision Making Advances in Cognitive Ergonomics Advances in Occupational, Social and Organizational Ergonomics Advances in Human Factors, Ergonomics and Safety in Manufacturing and Service Industries Advances in Ergonomics Modeling & Usability Evaluation Advances in Neuroergonomics and Human Factors of Special Populations

First published in 1987, this book discusses the life and natural history of moral systems as seen through the eyes of a biologist. The volume offers a comprehensive introspective of the biology of a moral system by examining the evolutionary approach from perspectives of sociobiology and ideology. Morality in relation to conflicts and confluences of interest among humankind are further evaluated, with particular emphasis on the human psyche and the ontogeny of moral behaviour. Philosophical meets biological with insightful commentary on the morality of law and democracy. The book concludes with an epilogue, bibliography and name and subject index. It is clear, concise and contemporary and would be of use to those studying Biology, Philosophy and many other social sciences.

This book discusses the risks of information concealment in the context of major natural or industrial disasters – offering detailed descriptions and analyses of some 25 historical cases (Three Mile Island nuclear accident, Bhopal disaster, Challenger Space Shuttle explosion, Chernobyl nuclear disaster, Deepwater Horizon oil spill, Fukushima-Daiichi nuclear disaster, Enron's bankruptcy, Subprime mortgage crisis, Worldwide Spanish flu and SARS outbreaks, etc.) and applying these insights to selected on-going cases where such information concealment is suspected. Some successful examples of preventive anti-concealment practice are also presented. In the book, the term 'concealment' is used to represent the two distinct behaviors uncovered in the investigations: (i) facts and information about an organization and its functioning being hidden from those that need them – here the concealment can be due to various factors, such as complexity and miscommunication, to name but two – and (ii) the conscious and deliberate action of keeping important information secret or misrepresenting it. This second meaning makes up a surprisingly important part of the evidence presented. Accordingly, emphasis has been put on this second aspect and the approach is more pragmatic than academic, remaining focused on evidence-based practical and useful factors. It raises awareness and provides valuable lessons for decision-makers, risk specialists and responsible citizens alike. This work is also intended as a fact-based reference work for future academic and scholarly investigations on the roots of the problem, in particular regarding any psychological or sociological modeling of human fallibility.

"I would recommend each Home purchase a copy"-Ian Turner, Chair, Registered Nursing Home Association "Identifies a gap in the sector and offers a practical means of addressing the need."- Des Kelly, OBE, Executive Director, National Care Forum The Care Home Handbook has one aim: to improve the care and wellbeing of residents in care homes. It informs, reminds and refreshes the reader's knowledge, enabling care homes to meet the essential standards of care required of them. Aimed at all nurses and healthcare assistants working in care homes, this invaluable, unique and jargon-free resource will help staff deliver skilful care, prevent poor practice, and build knowledge and confidence when working with older people. Grounded in everyday practice, this handbook promotes professional and person-centred care that is safe, high-quality, caring and compassionate. It features sections on the resident's journey, values and standards, core nursing skills, common clinical conditions, medicines management, infection control, and risk.

Some vols. include supplemental journals of "such proceedings of the sessions, as, during the time they were depending, were ordered to be kept secret, and respecting which the injunction of secrecy was afterwards taken off by the order of the House."

Touch may well be one of the least understood or talked about subjects in the helping professions. A discussion on the importance and ethics of positive, caring, and appropriate touch in professions such as teaching, nursing and counselling is long overdue. Touch in the Helping Professions delivers just that, weaving together scholarly evidence, research and clinical practice from a wide range of perspectives encompassing philosophy, theology, psychology, and anthropology to challenge assumptions about the role of

touch in the helping professions. The contributors to the volume focus not only on the overarching roles of gender, age, culture and life experience, but go beyond to encompass canine-assisted therapy, touch deprivation, sacred objects, as well as key ethical considerations. The prevailing lack of dialogue, due to fear of contravening ethical boundaries, has stood in the way of an open and responsible discussion on the use of touch in therapy. Touch in the Helping Professions is a welcome and much needed contribution to the field—a window onto a fundamental need. This book is published in English. - Cet ouvrage offre un ensemble de données probantes et de résultats cliniques à l'appui du toucher dans le développement physique et émotionnel. Il est structuré selon trois axes : la théorie sur le toucher; la pratique du toucher dans un contexte de thérapie, et les questions éthiques. Il aborde la question du rôle du genre, de l'âge, de la culture et de l'expérience de vie, des sujets comme la zoothérapie, la privation sensorielle, des objets sacrés, et des considérations d'ordre éthique. Les approches variées – philosophie, théologie, psychologie, anthropologie – remettent en question les présuppositions, offrent un contexte historico-culturel professionnel, et font appel à des données primaires. Les collaborateurs soutiennent que le toucher sain et non sexuel n'est pas suffisamment enseigné dans le cadre de la formation professionnelle. Cette absence de dialogue – engendrée par la crainte de dépasser des bornes éthiques, fait en sorte qu'une discussion ouverte et responsable sur l'utilisation du toucher dans un cadre thérapeutique ne peut avoir lieu, alors même qu'elle contribuerait aux balises théoriques de notre compréhension de cet enjeu fondamental. Ce livre est publié en anglais.

Neurocritical Care Board Review: Questions and Answers provides clinicians with a thorough review of the complex subspecialty of Neurocritical Care, using a question-and-answer (Q&A) format. The Q&A format is easily readable, high yield, and serves as good practice for test takers or anyone looking to improve or reinforce essential knowledge. The book covers the key topics pertinent to (and found on) neurocritical care boards, and is organized according to the exam core curriculum outline.. A total of 649 questions address both neuroscience critical care (general neurology, neurotrauma, neurovascular and neurosurgical problems) and general critical care topics (systems trauma, cardiovascular, infectious disease, pulmonary and renal issues, and hemodynamic monitoring). Detailed explanations follow in the answer section of each chapter, along with references for further study. Where relevant, neuroimaging, EEG and monitoring waveforms, and other images are included in case questions to allow candidates to familiarize themselves with these tools that form a significant part of the exam. Features of Neurocritical Care Board Review include: Comprehensive, high-yield review that covers all areas tested on the neurocritical care certifying exam Applicability to a wide range of physicians in multiple specialties reviewing for boards or looking to test skills and clinical acumen in this challenging area Question and answer format with detailed explanations and references to facilitate recall of must-know information and help identify knowledge gaps for further attention Material aggregated from multiple specialties into a singular resource for exam study

From Carol Jago and the authors of The Language of Composition comes the first textbook designed specifically for the AP\* Literature and Composition course. Arranged thematically to foster critical thinking, Literature & Composition: Reading • Writing • Thinking offers a wide variety of classic and contemporary literature, plus all of the support students need to analyze it carefully and thoughtfully. The book is divided into two parts: the first part of the text teaches students the skills they need for success in an AP Literature course, and the second part is a collection of thematic chapters of literature with extensive apparatus and special features to help students read, analyze, and respond to literature at the college level. Only Literature & Composition has been built from the ground up to give AP students and teachers the materials and support they need to enjoy a successful and challenging AP Literature course. Use the navigation menu on the left to learn more about the selections and features in Literature & Composition: Reading • Writing • Thinking. \*AP and Advanced Placement Program are registered trademarks of the College Entrance Examination Board, which was not involved in the publication of and does not endorse this product.

Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

Land use in Hawai'i remains the most regulated of all the fifty states. According to many sources, the process of going from raw land to the completion of a project may well average ten years given that ninety-five percent of raw land is initially classified by the State Land Use Commission as either conservation or agriculture. How did this happen and to what end? Will it continue? What laws and regulations control the use of land? Is the use of land in Hawai'i a right or a privilege? These questions and others are addressed in this long-overdue second edition of Regulating Paradise, a comprehensive and accessible text that will guide readers through the many layers of laws, plans, and regulations that often determine how land is used in Hawai'i. It provides the tools to analyze an enormously complex process, one that frustrates public and private sectors alike, and will serve as an essential reference for students, planners, regulators, lawyers, land use professionals, environmental and cultural organizations, and others involved with land use and planning.

Shows how and why different kinds of tertiary education institutions engage in e-learning.

While the legal systems of the United Kingdom and Germany differ in essential respects, the current process of 'constitutionalisation' is well recognised on both sides of the Channel. 'Constitutionalisation' manifests itself in the evolution of a constitution and the influence of existing constitutional principles on the ordinary law. Human rights law provides one of the best examples of this process, and the aim of this book is to provide a comparative UK-German perspective on recent developments. First, it addresses human rights questions which arise in both jurisdictions in a similar way such as the tension between liberty and security, absolute rights such as human dignity and the prohibition of torture, and the question how conflicts between human rights are to be resolved and conceptualised. A second theme considers the impact of human rights on different areas of law, in particular administrative law, criminal law, labour law and private law generally. Finally, a third theme focuses on the intersection of national, supra- and international human rights law, in particular after the entry into force of the EU Charter on Fundamental Rights. The book thus reveals convergent and divergent answers to similar problems, examines differences in the impact of human rights on the legal systems under consideration, and traces parallel and distinct debates over and sensitivities about, human rights as well as sensitivities that arise in multi-layer situations in the UK and Germany.

In 1996 the Institute of Medicine launched the Quality Chasm Series, a series of reports focused on assessing and improving the nation's quality of health care. Preventing Medication Errors is the newest volume in the series. Responding to the key messages in earlier volumes of the series—"To Err Is Human (2000), Crossing the Quality Chasm (2001), and Patient Safety (2004)"—this book sets forth an agenda for improving the safety of medication use. It begins by providing an overview of the system for drug development, regulation, distribution, and use. Preventing Medication Errors also examines the peer-reviewed literature on the incidence and the cost of medication errors and the effectiveness of error prevention strategies. Presenting data that will foster the reduction of medication errors, the book provides action agendas detailing the measures needed to improve the safety of medication use in both the short- and long-term. Patients, primary health care providers, health care organizations, purchasers of group health care, legislators, and those affiliated with providing medications and medication-related products and services will benefit from this guide to reducing medication errors.

Arguably no American writer has had more of an impact on the modern horror scene than Howard Phillips Lovecraft, the man who created the Cthulhu Mythos, with its strange gods, eerie places, and forbidden books. But what sort of a man was Lovecraft, how did he create such a terrible universe, and where did his inspiration come from? Was it, as some have argued, based on esoteric knowledge forgotten or even denied to all sane people? In *A Haunted Mind*, Dr. Bob Curran explores what motivated Lovecraft—his personal life is just as strange as some of his creations—and drove him to create his terrible cosmos. Using both folklore and history, Dr. Curran investigates a wide variety of Lovecraftian mysteries. A word of warning: you may never look at Lovecraft—or the world—in exactly the same way again!

This book is a printed edition of the Special Issue "Understanding and Supporting 'Families with Complex Needs'" that was published in *Social Sciences Health and human services* currently face a series of challenges – such as aging populations, chronic diseases and new endemics – that require highly complex responses, and take place in multiple care environments including acute medicine, chronic care facilities and the community. Accordingly, most modern health care interventions are now seen as 'complex interventions' – activities that contain a number of component parts with the potential for interactions between them which, when applied to the intended target population, produce a range of possible and variable outcomes. This in turn requires methodological developments that also take into account changing values and attitudes related to the situation of patients' receiving health care. The first book to place complex interventions within a coherent system of research enquiry, this work is designed to help researchers understand the research processes involved at each stage of developing, testing, evaluating and implementing complex interventions, and assist them to integrate methodological activities to produce secure, evidence-based health care interventions. It begins with conceptual chapters which set out the complex interventions framework, discuss the interrelation between knowledge development and evidence, and explore how mixed methods research contributes to improved health. Structured around the influential UK Medical Research Council guidance for use of complex interventions, four sections, each comprised of bite-sized chapters written by multidisciplinary experts in the area, focus on: - Developing complex interventions - Assessing the feasibility of complex interventions and piloting them - Evaluating complex interventions - Implementing complex interventions. Accessible to students and researchers grappling with complex interventions, each substantive chapter includes an introduction, bulleted learning objectives, clinical examples, a summary and further reading. The perspectives of various stakeholders, including patients, families and professionals, are discussed throughout as are the economic and ethical implications of methods. A vital companion for health research, this book is suitable for readers from multidisciplinary disciplines such as medical, nursing, public health, health services research, human services and allied healthcare backgrounds.

This open access volume is the first academic book on the controversial issue of including spiritual care in integrated electronic medical records (EMR). Based on an international study group comprising researchers from Europe (The Netherlands, Belgium and Switzerland), the United States, Canada, and Australia, this edited collection provides an overview of different charting practices and experiences in various countries and healthcare contexts. Encompassing case studies and analyses of theological, ethical, legal, healthcare policy, and practical issues, the volume is a groundbreaking reference for future discussion, research, and strategic planning for inter- or multi-faith healthcare chaplains and other spiritual care providers involved in the new field of documenting spiritual care in EMR. Topics explored among the chapters include: Spiritual Care Charting/Documenting/Recording/Assessment Charting Spiritual Care: Psychiatric and Psychotherapeutic Aspects Palliative Chaplain Spiritual Assessment Progress Notes Charting Spiritual Care: Ethical Perspectives Charting Spiritual Care in Digital Health: Analyses and Perspectives Charting Spiritual Care: The Emerging Role of Chaplaincy Records in Global Health Care is an essential resource for researchers in interprofessional spiritual care and healthcare chaplaincy, healthcare chaplains and other spiritual caregivers (nurses, physicians, psychologists, etc.), practical theologians and health ethicists, and church and denominational representatives.

Widely praised for its balanced treatment of computer ethics, *Ethics for the Information Age* offers a modern presentation of the moral controversies surrounding information technology. Topics such as privacy and intellectual property are explored through multiple ethical theories, encouraging readers to think critically about these issues and to make their own ethical decisions.

Drawing together a wide range of literature, this original book combines social theory with elements from the built environment disciplines to provide insight into how and why we build places and dwell in spaces that are at once contradictory, confining, liberating and illuminating. This groundbreaking book deals with topical issues, which are helpfully divided into two parts. The first presents a conceptual

framework examining how the built environment derives from a variety of influences: structural, institutional, textual, and action-orientated. Using illustrated case study examples, the second part covers new build schemes, including urban villages, gated communities, foyers, retirement homes and televillages, as well as refurbishment projects, such as mental hospitals and tower blocks. Multidisciplinary in its focus, *Housing Transformations* will appeal to academics, students and professionals in the fields of housing, planning, architecture and urban design, as well as to social scientists with an interest in housing. *The System of Objects* is a tour de force—a theoretical letter-in-a-bottle tossed into the ocean in 1968, which brilliantly communicates to us all the live ideas of the day. Pressing Freudian and Saussurean categories into the service of a basically Marxist perspective, *The System of Objects* offers a cultural critique of the commodity in consumer society. Baudrillard classifies the everyday objects of the “new technical order” as functional, nonfunctional and metafunctional. He contrasts “modern” and “traditional” functional objects, subjecting home furnishing and interior design to a celebrated semiological analysis. His treatment of nonfunctional or “marginal” objects focuses on antiques and the psychology of collecting, while the metafunctional category extends to the useless, the aberrant and even the “schizofunctional.” Finally, Baudrillard deals at length with the implications of credit and advertising for the commodification of everyday life. *The System of Objects* is a tour de force of the materialist semiotics of the early Baudrillard, who emerges in retrospect as something of a lightning rod for all the live ideas of the day: Bataille’s political economy of “expenditure” and Mauss’s theory of the gift; Reisman’s lonely crowd and the “technological society” of Jacques Ellul; the structuralism of Roland Barthes in *The System of Fashion*; Henri Lefebvre’s work on the social construction of space; and last, but not least, Guy Debord’s situationist critique of the spectacle.

For many health care professionals and social service providers, the hardest part of the job is breaking bad news. The news may be about a condition that is life-threatening (such as cancer or AIDS), disabling (such as multiple sclerosis or rheumatoid arthritis), or embarrassing (such as genital herpes). To date medical education has done little to train practitioners in coping with such situations. With this guide Robert Buckman and Yvonne Kason provide help. Using plain, intelligible language they outline the basic principles of breaking bad news and present a technique, or protocol, that can be easily learned. It draws on listening and interviewing skills that consider such factors as how much the patient knows and/or wants to know; how to identify the patient's agenda and understanding, and how to respond to his or her feelings about the information. They also discuss reactions of family and friends and of other members of the health care team. Based on Buckman's award-winning training videos and Kason's courses on interviewing skills for medical students, this volume is an indispensable aid for doctors, nurses, psychotherapists, social workers, and all those in related fields.
