Modern Banking focuses on the theory and practice of banking, and its prospects in the new millennium. The book is written for courses in banking and finance at Masters/MBA level, or undergraduate degrees specialising in this area. Bank practitioners wishing to deepen and broaden their understanding of banking issues may also be attracted to this book. While they often have exceptional and detailed knowledge of the areas they have worked in, busy bankers may be all too unaware of the key broader issues. Consider the fundamental questions: What is unique about a bank? and What differentiates it from other financial institutions? Answering these questions begins to show how banks should evolve and adapt - or fail. If bankers know the underlying reasons for why profitable banks exist, it will help them to devise strategies for sustained growth. Modern Banking concludes with a set of case studies that give practical insight into the key issues covered in the book: The core banking functions Different types of banks and diversification of bank activities Risk management: issues and techniques Global regulation: Basel 1 and Basel 2. Bank regulation in the UK, US, EU, and Japan Banking in emerging markets Bank failure and financial crises Competitive issues, from cost efficiency to mergers and acquisitions Case Studies including: Goldman Sachs, Bankers Trust/Deutsche Bank, Sumitomo Mitsui, Bancamer The "Diversity in Clinical Neuropsychology" series is designed to highlight cultural and moderator variables involved in the study of brain-behavior relationships. Historically, the study of psychology and neuropsychology has focused on the male brain being the standard to which all or most variables are considered. The study of sex differences is perhaps the most provoking and far-reaching aspect of diversity because frequently women have unique assessment and treatment needs. For example, frontal lobe functioning tends to be more contextual for women than for men. These brain functions have behavioral counterparts that directly relate to how interventions may be tailor made to suit the female rather than male patient. The goal in neuropsychology is always to improve diagnosis and treatment outcomes, and a cohesive summary of the neuropsychology of the female brain would raise awareness and cultural competency of clinicians in neuropsychology. Authors will focus on sex differences in the neuropsychological, cognitive, and development literature; ethnic and socioeconomic variables affecting diagnosis and treatment of women; and social/emotional and behavioral manifestations of neuropsychological sex differences.

Theory of Adaptive Structures provides the basic theory for controlling adaptive structures in static and dynamic environments. It synthesizes well-established theories on modern control as well as statics and dynamics of deformable bodies. Discussions concentrate on the discrete parameter adaptive structures dealing with actuator placement, actuator selection, and actuation computation problems - keeping these structures at close proximity of any chosen nominal state with the least energy consumption. An introduction to the distributed parameter adaptive structures is also provided. The book follows that modern trend in research and industry striving to incorporate intelligence into engineered products through microprocessors that are becoming smaller, faster, and cheaper at astounding rates. Not using them in engineered products may become an enormous liability. Resulting from the advances in materials technology on sensors and actuator technologies as well as the availability of very powerful and reliable microprocessors, there is an ever-increasing interest in actively controlling the behavior of engineering systems. Engineers and engineering scientists must revive and broaden their activities to maximize applications for predicting and controlling the behavior of deformable bodies. Topics include: An introduction to adaptive structures Incremental excitation-response relations in static and dynamic cases Active control of response in static case Statically determinate adaptive structures Statically indeterminate adaptive structures Active vibration control for autonomous and non-autonomous cases Active control against wind Active control against seismic loads Distributed parameter adaptive structures The technology of adaptive structures has created an environment where the analysis, not the computation, of structural response - du

The need for evidence-based practice in mental health services is becoming clearer by the day and, until recently, the trend of emphasizing services with supporting empirical evidence has been almost exclusively limited to a focus on treatment options. A Guide to Assessments That Work fills a void in the professional literature by addressing the critical role that assessment plays in providing evidence-based mental health services. To optimize its usefulness to readers, this volume addresses the assessment of the most commonly encountered disorders or conditions among children, adolescents, adults, older adults, and couples. Strategies and instruments for assessing mood disorders, anxiety disorders, couple distress and sexual problems, health-related problems, and many other conditions are also covered in depth. With a focus throughout on assessment instruments that are feasible, psychometrically sound, and useful for typical clinical requirements, a rating system has been designed to provide evaluations of a measure's norms, reliability, validity, and clinical utility. Standardized tables summarize this information in each chapter, providing essential information on the most scientifically sound tools available for a range of assessment needs. Using the tools provided in A Guide to Assessments That Work, readers can at a glance determine the possible suitability and value of each instrument for their own clinical purposes. This much needed resource equips readers with the knowledge necessary for conducting the best evidence-based mental health assessments currently possible.

There have been numerous books published that have dealt with psychological assessment. These books have ranged from the theoretical to the clinical. However, most of the pragmatics involved in the day-to-day activities of the psychological assessor often have been neglected in the press. In light of the above, the primary objective of Psychological Assessment in Clinical Practice is to provide the reader (students and practitioners alike) with the realities of conducting psychological assessment in clinical settings where there is not the availability of a plethora of research assistants and staff. Indeed, most individuals end up being solo practitioners or at best work in settings where they must conduct assessment themselves. This multi-authored book, then, details the specifics as to how this is done.

This leading text and clinical guide offers best-practice recommendations for assessing a comprehensive array of child and adolescent mental health problems and health risks. Coverage encompasses behavior disorders, mood disorders, anxiety disorders, developmental disorders, maltreatment, and adolescent problems. The volume emphasizes the need to evaluate clients' strengths as well as their deficits, and to take into account the developmental, biological, familial, and cultural contexts of problem behavior.
