An addition to the Studies in Language Testing series, this volume provides an overview of English language testing over the last century, with coverage of key theoretical and practical aspects of the assessment of reading, listening, writing and speaking skills. It includes examples of the Cambridge English exams, old and new, and is the first volume to describe in a systematic way the different theoretical influences which have shaped the development of the constructs underlying Cambridge English exams in the last 100 years.

Routledge Introductions to Applied Linguistics is a series of introductory level textbooks covering the core topics in Applied Linguistics, primarily designed for those beginning postgraduate studies, or taking an introductory MA course as well as advanced undergraduates. Titles in the series are also ideal for language professionals returning to academic study. The books take an innovative 'practice to theory' approach, with a 'back-to-front' structure. This leads the reader from real-world problems and issues, through a discussion of intervention and how to engage with these concerns, before finally relating these practical issues to theoretical foundations. Additional features include tasks with commentaries, a glossary of key terms, and an annotated further reading section. Exploring Language Assessment and Testing is a straightforward introduction to the field that provides an inclusive and impartial survey of both classroom based assessment by teachers and larger scale testing, using concrete examples to guide students to the relevant literature. Ranging from theory to classroom based scenarios, the author provides practical guidance on designing, developing and using assessments, with flexible, step by step processes for improving the quality of tests and assessment systems to make them fairer and more accurate. This book is an indispensable introduction to the areas of language assessment and testing, and will be of interest to language teachers as well as postgraduate and advanced undergraduate students studying Language Education, Applied Linguistics and Language Assessment. This volume examines the nature of second language listening proficiency and how it can be assessed. The book highlights the need for test developers to provide a clear explication of the ability constructs which underpin the tests they offer in the public domain. This is increasingly necessary if claims about the validity of test score interpretation and use are to be supported both logically and with empirical evidence. It operationalises a comprehensive test validation framework which adopts a socio-cognitive perspective. The framework embraces six core components, examining and then analysing Cambridge ESOL listening tasks from the following perspectives: Test Taker; Cognitive Validity; Context Validity; Scoring Validity; Criterion-related Validity; and Consequential Validity.

This book constitutes the proceedings of the Third International Conference on Analysis of Images, Social Networks and Texts, AIST 2014, held in Yekaterinburg, Russia, in April 2014. This collection gathers contributions from scholars from Poland and abroad addressing different facets of research into the processes of foreign-language and second-language learning and teaching as they transpire in a typical language classroom. The

book is divided into three parts, which address in turn: research directions and methodology, the findings of empirical research, and links between theoretical considerations and classroom practice. Accordingly, the first part includes papers that examine the role of different research paradigms, put forward concrete research proposals, present innovative data gathering tools or assess the role of such instruments in language teaching. The second part includes reports on original research studies focusing e.g. on teachers' beliefs, the role of lexis and pragmatics, the application of modern technologies, the teaching and assessment of primary school children, and the development of social skills from a cross-cultural perspective. Finally, the third part of the book demonstrates how theory-driven approaches can enhance the effectiveness of instructed second language acquisition.

The enormous growth in trade and commerce as a result of industrial revolution and subsequent liberalisation of trade has placed tremendous pressures on accounting and auditing professionals. Reliable information that facilitates business decisions is affected by rapid growth of information technology and businesses need sufficient reliable information which can be obtained through some verification performed by independent persons. Auditing has permanently evolved, answering such questions. Governments of many nations mandated companies to make provisions for accounts of companies to be checked and reported by people other than the managers of the company. Given the non-transparent governance practices in boards and management of big corporations, it becomes imperative to adopt strict auditing and corporate governance practices. This book is an attempt to introduce to learners the concept of auditing and its relevance in current times. The growing importance of auditing can be gauged from the formulation of auditing standards; this aspect of standards of auditing and procedure for issue of standards of auditing by AASB has been discussed extensively in this book. The book also renders to its readers an understanding of auditor's duties and liabilities, explained diagrammatically alongside imparting knowledge on commencement of auditing and auditing process. It also describes in detail the mechanisms of internal control, internal check and internal audit, highlighting the differences between these three concepts. The process of vouching, which is the foundation of audit process, is well documented for vouching of trading and cash transactions. As information technology has become pervasive in every field, auditing is no exception and therefore the author attempted to describe auditing in an EDP

environment. Readers of the book would find it interesting to read about verification and valuation of assets and comprehend the role of audit committees and audit reports. The book would serve as an essential reading for all students of Commerce and those pursuing professional courses of accounting and auditing. It also comes handy for students pursuing B.Com. from Universities in the State of Telangana as the book is planned and written in accordance with the revised CBCS syllabus.

A comprehensive introduction to machine learning that uses probabilistic models and inference as a unifying approach. Today's Web-enabled deluge of electronic data calls for automated methods of data analysis. Machine learning provides these, developing methods that can automatically detect patterns in data and then use the uncovered patterns to predict future data. This textbook offers a comprehensive and self-contained introduction to the field of machine learning, based on a unified, probabilistic approach. The coverage combines breadth and depth, offering necessary background material on such topics as probability, optimization, and linear algebra as well as discussion of recent developments in the field, including conditional random fields, L1 regularization, and deep learning. The book is written in an informal, accessible style, complete with pseudo-code for the most important algorithms. All topics are copiously illustrated with color images and worked examples drawn from such application domains as biology, text processing, computer vision, and robotics. Rather than providing a cookbook of different heuristic methods, the book stresses a principled model-based approach, often using the language of graphical models to specify models in a concise and intuitive way. Almost all the models described have been implemented in a MATLAB software package—PMTK (probabilistic modeling toolkit)—that is freely available online. The book is suitable for upper-level undergraduates with an introductory-level college math background and beginning graduate students.

This book provides what international trade law has hitherto lacked: a coherent analysis of 'product likeness' under Article III of the GATT. Christian A. Melischek

develops an economic approach to the interpretation of 'like' products on the basis of a comparative analysis with antitrust theories on market definition. Not only does he propose a specific substantive economic test to render the notion of product likeness operational, but he also examines the institutional and procedural frameworks for expert economic evidence necessary to implement an economic approach to the interpretation of product likeness. On a methodological level, the book adds a new interdisciplinary dimension to the legal debate by exploring the use of quantitative and econometric methods for the implementation of the proposed economic test.

This book introduces the theoretical and empirical bases for the definition of language learning level in functional 'Can Do' terms for the English Profile Programme, setting out the ambitions of the Programme and presenting emerging findings. The English Profile Programme is an elaboration of the performance level descriptions of the Common European Framework of Reference for Languages (CEFR) that is concerned specifically with the English language. The CEFR has become influential in building a shared understanding of performance levels for foreign language learners. However, there is a considerable gap between the broad descriptions of levels provided, which covers a range of languages and learning contexts, and the level of detail required for applications such as syllabus or test design, which this volume addresses. With its combination of theoretical insights and practical advice, this is a useful work for academics, policy-makers, curriculum designers, textbook writers, postgraduate students and examination board staff.

Research indicates that aural skills are vital in developing musical expertise, yet the precise nature of those skills and the emphasis placed upon them in educational contexts merit closer attention and exploration. This book assesses the relevance of aural in a university music degree and as a preparation for the professional career of a classical musician. By way of the discussion of four empirical studies, two main areas are investigated: firstly, the relationship between university music students' aural ability and their overall success on a music degree programme, and, secondly, the views of music students and professional musicians about aural and its relevance to their career are analysed. The subject is investigated particularly in the light of the current socio-educational background of the past fifty years, which has greatly influenced the participation of music and the study and development of musicianship. Many related issues are touched upon as part of the research for this project, and these emerge as relevant topics in the discussion of aural. Apart from students' and musicians' views on training and singing, aspects considered include the role of improvisation, memorisation and notation, examinations, absolute pitch and the affinity with language, all of which have a part to play in the debate about the importance of aural.
