Written by one of ANZ's premier sustainability and social accounting academics, An Introduction to Accounting: Accountability in Organisations and Society brings today's accounting hot topics of corporate accountability, sustainability and social responsibility to life with the only complete textbook created from the ground up for these modern accounting teaching and learning concepts. An Introduction to Accounting: Accountability in Organisations and Society takes a unique approach in embracing from the start the notion of accountability for the environment and sustainability in accounting; the structure, content and learning activities provide students with an understanding of accounting's pervasive and transformative role as a social practice and organisational driver. It shows that environments, ideas and values change; the interconnectivity of society; that the planet must be respected as a resource; and that people are affected/influenced by the information they receive and the way it is presented. It is emphasised that accounting and accountability are key aspects of every person's life and that the practice of accounting, while often being seen as very technical in nature, has many social implications. Learning accounting through the lens of sustainability and the environment embeds this perspective in students' minds so that in their careers they will actively seek and use accounting information to make decisions that take into consideration accountability for the environment. The study of the interactions between business organizations and their natural environments has gained momentum recently under the aegis of social and environmental accounting and reporting (SEAR), and as a diluted form of response in corporate social responsibility (CSR). Environmental Accounting, Sustainability and Accountability envisages accounting as an effective instrument in improving this interrelationship. It comprehensively describes how organizations can capture their environmental performance and thereby address societal concerns. The book closely explores how organizations can embed care for the environment as fundamental to their functioning. It broadly covers traditional accounting as a measuring instrument, contemporary advances and unresolved problems, alternative perspectives and recent developments. The central idea proposed here is to evolve the environmental accounting framework and bring calculative aspects into sustainability thinking that businesses are responsible for. Among the other important innovative ideas discussed are new costing techniques for waste management, accounting schematics of carbon trade, green information

It explains the fundamental concepts of auditing and takes the reader through the various stages of the audit process. It also discusses topical aspects of auditing such as legal liability, audit risk, quality control, and the impact of information technology. Brenda Porter is currently visiting Professor at Exeter University and Chulalongkorn University, Bangkok.

We have spent a great deal of time on the continued development of accounting and auditing standards, which are used as a primary component of corporate reporting, to reach today's financial reporting framework. However, is it possible to say that, currently, financial statements provide full and prompt disclosure? Or will they still be useful as a primary element with their current structures in corporate reporting? Undoubtedly, we are deeply concerned about these issues in recent times. This volume contains chapters to discuss the today's and tomorrow's accounting and corporate reporting phenomena in a comprehensive and multidimensional way. Therefore, this book is organized into six sections: "Achieving Sustainability through Corporate Reporting", "International Standardization", "Financial Reporting Quality", "Accounting Profession and Behavioral Aspects", "Public Sector Accounting and Reporting", and "Managerial Accounting".

The Internet bubble has collapsed and the largest bankruptcy in US history, Enron, has made the call for greater transparency in financial reporting more important than ever. Andrew Higson draws attention to what is a 'true and fair view' in reporting and critically examines accounting theory and modern practice.

This book deals with the debated relationship between the characteristics of national supervision and manipulative practices in banks annual reports, with a specific focus on income smoothing. The issue is quite challenging as, since the 2008 financial crisis, governmental bodies and regulators have stressed the crucial role of supervision for bank transparency purposes, but the effect of supervision on accounting manipulation is still discussed. Focusing on European banks, the book investigates whether the characteristics of national supervision affect bank propensity to smooth income, also considering the potential role of bank business models. By exploring a broad range of national supervisions characteristics, the book presents a comprehensive view on the influence of country-level institutional settings on a form of earnings management widely used across the banking industry.
