The idea for this manual came from Pfizer in the US, which provided the Clinical Trials Centre at The University of Hong Kong, Hong Kong SAR, PR China with a nonbinding grant for its development. The general project layout protocol was accepted by Pfizer in July 2009. Pfizer has not in any way interfered with the project, except for providing nonbinding comments to the final product. The entire text of this manual was written by Johan PE Karlberg. Marjorie A Speers provided considerable and essential comments on the contents and the first and subsequent drafts. A group of international human research protection experts mostly working in non-profit institutions or organisations - see Contributors for details - reviewed and provided important comments on the contents and final draft. It was solely created with the intention to promote human research protection of participants in clinical trials. This manual will be translated into numerous languages and is provided free of charge as an electronic file over the Internet (<http://www.ClinicalTrialMagnifier.com>) and offered in print for a fee. The objective beyond this project is to establish educational activities, developed around the manual, and jointly organised with leading academic institutions worldwide.

Social workers are called upon to shift from a human-centric bias to an ecological ethical sensibility by embracing love as integral to their justice mission and by extending the idea of social justice to include environmental and species justice. This book presents the love ethic model as a way to do eco-justice work using public campaigns, research, community arts practice and other nonviolent, direct action strategies. The model is premised on an active and ongoing commitment

to the eco-values of love, eco-justice and nonviolence for the purpose of upholding the public interest. The love ethic model is informed by the stories of eco-activists who used nonviolent actions to address ecological issues such as: pollution; degradation of the environment; exploitation of farm animals; mining industry overriding First Nation Peoples' land rights; and human health and social costs related to the natural resource industries, private land developments and government infrastructure projects. Informed by practice insights by activists from a range of eco-justice concerns, this innovative book provides new directions in social work and environmental studies involving transformational change leadership and dialogical group work between interest groups. It should be considered essential reading for social work students, researchers and practitioners as well as eco-activists more generally.

Regenerative Engineering and Developmental Biology: Principles and Applications examines cutting-edge developments in the field of regenerative engineering. Specific attention is given to activities that embrace the importance of integrating developmental biology and tissue engineering, and how this can move beyond repairing damage to body parts to instead regenerate tissues and organs. The text furthermore focusses on the five legs of the field of regenerative engineering, including: materials, developmental biology, stem cells, physics, and clinical translation. This book was written by leading

developmental biologists; each chapter examines the processes that these biologists study and how they can be advanced by using the tools available in tissue engineering/biomaterials. Individual chapters are complete with concluding remarks and thoughts on the future of regenerative engineering. A list of references is also provided to aid the reader with further research. Ultimately, this book achieves two goals. The first encourages the biomedical community to think about how inducing regeneration is an engineering problem. The second goal highlights the discoveries with animal regeneration and how these processes can be engineered to regenerate body parts. *Regenerative Engineering and Developmental Biology: Principles and Applications* was written with undergraduate and graduate-level biomedical engineering students and biomedical professionals in mind.

Featuring a timely presentation of total survey error (TSE), this edited volume introduces valuable tools for understanding and improving survey data quality in the context of evolving large-scale data sets This book provides an overview of the TSE framework and current TSE research as related to survey design, data collection, estimation, and analysis. It recognizes that survey data affects many public policy and business decisions and thus focuses on the framework for understanding and improving survey data quality. The book also addresses issues with data quality in official statistics and in social, opinion, and market research as these fields continue to evolve, leading to larger and messier data sets. This perspective challenges survey organizations to find ways to collect and process data more efficiently without sacrificing quality. The volume consists of the most up-to-date research and reporting from over 70 contributors representing the best academics and researchers from a range of fields. The chapters are broken out into five main sections: The Concept of TSE and the TSE Paradigm, Implications for Survey Design, Data Collection and Data Processing Applications, Evaluation and Improvement, and Estimation and Analysis. Each chapter introduces and examines multiple error sources, such as sampling error, measurement error, and nonresponse error, which often offer the greatest risks to data quality, while also encouraging readers not to lose sight of the less commonly studied error sources, such as coverage error, processing error, and specification error. The book also notes the relationships between errors and the ways in which efforts to reduce one type can increase another, resulting in an estimate with larger total error. This book:

- Features various error sources, and the complex relationships between them, in 25 high-quality chapters on the most up-to-date research in the field of TSE
- Provides comprehensive reviews of the literature on error sources as well as data collection approaches and estimation methods to reduce their effects
- Presents examples of recent international events that demonstrate the effects of data error, the importance of survey data quality, and the real-world issues that arise from these errors
- Spans the

four pillars of the total survey error paradigm (design, data collection, evaluation and analysis) to address key data quality issues in official statistics and survey research Total Survey Error in Practice is a reference for survey researchers and data scientists in research areas that include social science, public opinion, public policy, and business. It can also be used as a textbook or supplementary material for a graduate-level course in survey research methods.

An examination of the relationship between competition and the deregulation and liberalisation of the US and European air transport sectors reveals that the structure of the air transport sector has undergone a number of significant changes. A growing number of airlines are entering into horizontal and vertical cooperative arrangements and integration including franchising,

codeshare agreements, alliances, 'virtual mergers' and in some cases, mergers with other airlines, groups of airlines or other complementary lines of business such as airports. This book considers the current legal issues affecting the air transport sector incorporating recent developments in the industry, including the end of certain exemptions from EU competition rules, the effect of the EU-US Open Skies Agreement, the accession of new EU Member States and the Lisbon Treaty. The book explores the differing European and US regulatory approaches to the changes in the industry and examines how airlines have remained economically efficient in what is perceived as a complex and confused regulatory environment. *Competition and Regulation in the Airline Industry* will be of particular interest to academics and students of competition law as well as EU law.

An essential preparation book for the ACSM Certified Exercise Physiologist examination, *ACSM's Resources for the Exercise Physiologist, 3rd Edition*, is an essential volume for certification candidates and practicing Exercise Physiologists looking to boost their exam confidence and achieve success in practice. This updated edition is fully aligned with the eleventh edition of ACSM's *Guidelines for Exercise Testing and Prescription* and reflects the most current standards and practices in exercise physiology. Published by the American College of Sports Medicine, this practical resource is organized around the scope of ACSM-EP practice domains. A clear introduction to understanding exercise, physical activity, and pre-exercise screening opens the book, followed by thorough coverage of assessment and programming for healthy populations, assessment and programming for special populations, counseling and behavioral strategies for encouraging exercises, and legal, management and professional issues relevant to practice. This book examines social identity transformations through interreligious relations in post-Reformasi Indonesia. It answers two questions: how do Muslims and Christians identify and position themselves and others; and what are the socio-cognitive effects of their identification and positioning? The objectives are, first, to gain insight into the relation between religious discourse and (the lack of) social cohesion, and, second, to contribute to a theory and method of

studying interreligious relations. The study is based on 24 focus group discussions in Surakarta (Central Java), making a critical discourse analysis of them. The book concludes that the interviewees use various classifications to identify and position themselves and others, although these are not fixed but fluid, depending on specific situations and interests. The book advocates for a shift from the 'social identity' theory to a 'multiple identity' theory for studying religion and interreligious relations. (Series: Interreligious Studies - Vol. 6)
