INTRODUCTION This current set of medical guidelines has gone through some significant improvements since the original release in 2014 and were developed through a collaboration of Emergency Medicine professionals, experienced Flight Medics, Aeromedical Physician Assistants, Critical Care Nurses, and Flight Surgeons.

There has been close coordination in the development of these guidelines by the Joint Trauma System, Committee of En Route Combat Casualty Care and the Committee of Tactical Combat Casualty Care. Our shared goal is to ensure excellent en route care that is standard across all evacuation and emergency medical pre-hospital units. It is our vision that all of these enhancements and improvements will advance en route care across the services and the Department of Defense. The CCFP Program Office facilitates appropriate training and medical education to the CCFP providers. The CCFP program of instruction ensures the appropriate skills and knowledge required for CCFPs to apply these medical guidelines during aeromedical evacuation. Unit medical trainers and medical directors should evaluate CCFPs ability to follow and execute the medical instructions herein. These medical guidelines are intended to guide Critical Care Flight Paramedics (CCFP) and prehospital professionals in the response and management of emergencies and the care and treatment of patients in both garrison and theater of war environments. Unit medical providers are not expected to employ these guidelines blindly. Unit medical providers are expected to manipulate and adjust these guidelines to their unit's mission and medical air crew training / experience. Medical directors or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and

advanced practice aeromedical providers.

Transport of the Critical Care Patient Mosby

Sick babies and children are moved between hospitals for many reasons, often to receive specialist care and treatment not available locally. For the transfer to be safe and effective it is necessary to plan carefully for these occasions, and for the doctors and nurses attending the transport to be able to provide intensive care on the move. The book provides guidance in both of these major areas. The first section - 'Planning for Safe and Effective Transport' - details issues to be considered by senior staff in setting-up or modernising a transport programme. General principles and relevant physiology are outlined, and vehicles and equipment are discussed in depth. The second section - 'Practical Transport Management' - is concerned with different patient groups and key clinical issues. These include the distinctive features of neonatal and paediatric patients, and management of airway, breathing and circulation. Other chapters discuss airborne transport, pharmacology, trauma, and special interventions for transport such as extracorporeal membrane oxygenation and inhaled nitric oxide.

Children represent a special challenge for emergency care providers, because they have unique medical needs in comparison to adults. For decades, policy makers and providers have recognized the special needs of children, but the system has been slow to develop an adequate response to their needs. This is in part due to inadequacies within the broader emergency care system. Emergency Care for Children examines the challenges

Online Library Critical Care Emergency Medical Transport Umhc Pace

associated with the provision of emergency services to children and families and evaluates progress since the publication of the Institute of Medicine report Emergency Medical Services for Children (1993), the first comprehensive look at pediatric emergency care in the United States. This new book offers an analysis of:

- The role of pediatric emergency services as an integrated component of the overall health system.
- System-wide pediatric emergency care planning, preparedness, coordination, and funding.
- Pediatric training in professional education.
- Research in pediatric emergency care.

Emergency Care for Children is one of three books in the Future of Emergency Care series. This book will be of particular interest to emergency health care providers, professional organizations, and policy makers looking to address the pediatric deficiencies within their emergency care systems.

As a registered nurse for the last 28 years, my primary clinical expertise has been working in the pre-hospital environment as a flight nurse and a paramedic, as well as continuing to work in a variety of clinical areas which include the emergency department, pediatrics and endoscopy. My extensive clinical background has also given me the opportunity to work as a legal nurse consultant with one of the largest law firms in Arizona. Catastrophic disasters occurring in 2011 in the United States and worldwide--from the tornado in Joplin, Missouri, to the earthquake and tsunami in Japan, to the earthquake in New Zealand--have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of Medicine (IOM) to convene a committee of experts to develop national guidance for use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations--both naturally occurring and man-made--under conditions of scarce resources. Building on the work of phase one (which is described in IOM's 2009 letter report, *Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations*), the committee developed detailed templates enumerating the functions and tasks of the key stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement--state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. Crisis Standards of Care provides a framework for a systems approach to the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that

agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. Crisis Standards of Care is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement toolkit; and Volume 7 contains appendixes with additional resources.

INTRODUCTION The STANDARD MEDICAL OPERATING GUIDELINES (SMOG) continues to go through significant improvements with each release as a result of the collaboration of Emergency Medicine professionals, experienced Flight Medics, Aeromedical Physician Assistants, Critical Care Nurses, and Flight Surgeons. There has been close coordination in the development of these guidelines by the Joint Trauma System, and the Defense Committees on Trauma. Our shared goal is to ensure the highest quality en route care possible and to standardize care across all evacuation and emergency medical pre-hospital units. It is our vision that all of these enhancements and improvements will advance en route care across the services and the Department of Defense. Unit medical trainers and medical directors should evaluate Critical Care Flight Paramedics (CCFP) ability to follow and execute the medical instructions herein. These medical guidelines are intended to guide CCFPs and prehospital professionals in the response and management of emergencies and the care and treatment of patients in both garrison and combat theater environments. Unit medical providers are not expected to employ these guidelines blindly. Unit medical providers are expected to manipulate and adjust these guidelines to their unit's mission and medical air crew training / experience. Medical directors

or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and advanced practice aeromedical providers. The medication section of this manual is provided for information purposes only. CCFPs may administer medications only as listed in the guidelines unless their medical director (supervising physician) orders a deviation. Other medications may be added, so long as the unit supervising physician and/or medical director approves them. This manual also serves as a reference for physicians providing medical direction and clinical oversight to the CCFP. Treatment direction, which is more appropriate to the patient's condition than the guideline, should be provided by the physician as long as the CCFP scope of practice is not exceeded. Any medical guideline that is out of date or has been found to cause further harm will be updated or deleted immediately. The Medical Evacuation Concepts and Capabilities Division (MECCD) serves as the managing editor of the SMOG and are responsible for content updates, managing the formal review process, and identifying review committee members for the annual review. The Standard Medical Operating Guidelines are intended to provide medical procedural guidance and is in compliment to other Department of Defense and Department of the Army policies, regulatory and doctrinal guidance. Nothing herein overrides or supersedes laws, rules, regulation or policies of the United States, DoD or DA.

The effects of a disaster on healthcare can range from conditions that immediately besiege the system with large numbers of patients, to catastrophes that strain its long-term sustainability. Nurses, as frontline health professionals, must have an understanding of the situations they may face before, during and after a disaster and they must develop the skills and strategies to provide effective and immediate care.

International Disaster Nursing is the first truly comprehensive and internationally focused resource to address the diversity of issues and myriad scenarios that nurses and other health personnel could encounter during a disaster event. This text defines the many roles of the nurse within a multidisciplinary team, and aids the implementation of the community's disaster plans in a crisis. With an alarming increase in the occurrence of disasters in the last decade, International Disaster Nursing is the hallmark text in the field.

This comprehensive book provides practical guidance on the care of the critical patient in the emergency department. It focuses on the ED physician or provider working in a community hospital where, absent the consulting specialists found in a large academic center, the provider must evaluate and stabilize critically ill and injured patients alone. Structured in an easily accessible format, chapters present fundamental information in tables, bullet points, and flow diagrams.

Emergency medicine scenarios covered across 38 chapters include acute respiratory failure, spinal cord injuries, seizures and status epilepticus, care of the newborn, and end-of-life care. Written by experts in the field, *Emergency Department Critical Care* is an essential resource for practicing emergency physicians and trainees, internists and family physicians, advance practice nurses, and physician's assistants who provide care in emergency departments and urgent care centers.

This guide is designed with the special needs of field practitioners in mind. This useful, quick reference guide helps speed recognition of lab values, 12 lead ECG interpretation, fibrinolytic agents, hemodynamic monitoring, IABP's, rapid sequence intubation, chest tubes, and therapeutic medications and toxicology for the critical care transport provider.

Emergency Medical Services (EMS) is a critical component of our nation's emergency and trauma care system, providing response and medical transport to millions of sick and injured Americans each year. At its best, EMS is a crucial link to survival in the chain of care, but within the last several years, complex problems facing the emergency care system have emerged. Press coverage has highlighted instances of slow EMS response times, ambulance diversions, trauma center closures, and ground and air medical crashes. This

heightened public awareness of problems that have been building over time has underscored the need for a review of the U.S. emergency care system. Emergency Medical Services provides the first comprehensive study on this topic. This new book examines the operational structure of EMS by presenting an in-depth analysis of the current organization, delivery, and financing of these types of services and systems. By addressing its strengths, limitations, and future challenges this book draws upon a range of concerns:

- The evolving role of EMS as an integral component of the overall health care system.
- EMS system planning, preparedness, and coordination at the federal, state, and local levels.
- EMS funding and infrastructure investments.
- EMS workforce trends and professional education.
- EMS research priorities and funding.

Emergency Medical Services is one of three books in the Future of Emergency Care series. This book will be of particular interest to emergency care providers, professional organizations, and policy makers looking to address the deficiencies in emergency care systems.

Think back to a time when paramedics didn't exist. When "drivers" simply brought injured patients to the hospital. When the EMS industry was in its infancy. A time before Nancy Caroline. Dr. Caroline's work transformed EMS and the entire paramedic field. She

created the first national standard curriculum for paramedic training in the United States. She also wrote the first paramedic textbook: *Emergency Care in the Streets*. The impact that Dr. Caroline had on EMS and health care spanned across the U.S. and abroad. From establishing EMS systems to training paramedics, to providing better nourishment and health care for orphans, her work had a profound impact on humanity. Throughout her life, Dr. Caroline brought a sense of excitement, joy, and humor to her work. The American Academy of Orthopaedic Surgeons is proud to continue Dr. Caroline's legacy. Her sense of excitement and humor live on in this text, which is dedicated to her. The Sixth Edition honors Dr. Caroline's work with a clear, fun, understandable writing style for which she was known. Welcome back a familiar training companion to your classroom! Say hello to Sidney Sinus, AV Abe, and a cast of memorable characters and amusing anecdotes. Make learning for your students more fun!

Edited by eminent experts in the field, this text brings together medical specialists from all four branches of the armed services. This book discusses the history of aeromedical evacuation, triage and staging of the injured patient, evacuation from site of injury to medical facility, air-frame capabilities, medical capabilities in-flight, response to in-flight emergencies, and mass emergency evacuation. The rapid-fire response of aeromedical evacuation services is required to treat and transport patients injured in regional conflicts, in mass emergencies and natural disasters, in the face of terrorist attack, and in the event of biological or chemical warfare.
