Cyberbullying Research Paper Thesis

A century ago, John Dewey remarked that when home changes radically, school must change as well. With home, family, and gender roles dramatically altered in recent years, we are faced with a difficult problem: in the lives of more and more American children, no one is home. The Schoolhome proposes a solution. Drawing selectively from reform movements of the past and relating them to the unique needs of today's parents and children, Jane Martin presents a philosophy of education that is responsive to America's changed and changing realities. As more and more parents enter the workforce, the historic role of the domestic sphere in the education and development of children is drastically reduced. Consequently, Martin advocates removing the barriers between the school and the home--making school a metaphorical "home," a safe and nuturant environment that provides children with the experience of affection and connection otherwise missing or inconsistent in their lives. In this proposition, the traditional schoolhouse where children are drilled in the three Rs is transformed into a "schoolhome" where learning is animated by an ethic of social awareness. At a time when many school reformers are calling for a return to basics and lobbying for skills education and quick-fix initiatives, Martin urges us to reconsider the distinctive legacies of Dewey and Montessori and to conceive of a school that integrates the values of the home with those of social responsibility. With cultural diversity and gender equality among its explicit goals, the schoolhome expands upon Dewey's edict to educate the "whole child," seeking instead to educate all children in the culture's whole heritage. Martin eloquently challenges reformers to reclaim the founding fathers' vision of the nation as a domestic realm, and to imagine a learning environment whose curriculum and classroom practice reflect not merely an economic but a moral investment in the future of our children. More than a summons to action, this remarkable book is a call to rethink the assumptions we bring to the educational enterprise, and so, to act wisely. Easy-to-understand theories and nontechnical language help educators and parents understand how the teenage brain thinks, feels, learns, and changes on its journey to adulthood.

This book looks in depth at the emerging issue of cyber-bullying. In this increasingly digital world cyber-bullying has emerged as an electronic form of bullying that is difficult to monitor or supervise because it often occurs outside the physical school setting and outside school hours on home computers and personal phones. These web-based and mobile technologies are providing young people with what has been described as: 'an arsenal of weapons for social cruelty'. These emerging issues have created an urgent need for a practical book grounded in comprehensive scholarship that addresses the policy-vacuum and provides practical educational responses to cyber-bullying. Written by one of the few experts on the topic Cyber-Bullying develops guidelines for teachers, head teachers and administrators regarding the extent of their obligations to prevent and reduce cyber-bullying. The book also highlights ways in which schools can network with parents, police, technology providers and community organizations to provide support systems for victims (and perpetrators) of cyber-bullying.

"This book provides empirical research on the engineering of social network infrastructures, the development of novel applications, and the impact of social network- based services over the internet"--Provided by publisher.

Donohue and Associates, founding director, Technology in Early Childhood (TEC) Center at Erikson Institute, senior fellow and advisor, Fred Rogers Center Just as the previous generation was raised in front of televisions, adolescents at the turn of the 21st century are being raised in an internet-enabled world where blogs, social networking, and instant messaging are competing with face-to-face and telephone communication as the dominant means through which personal interaction takes place. Unfortunately, a small but growing proportion of our youth are being exposed online to interpersonal violence, aggression, and harassment via cyberbullying. The mission of this book is to explore the many critical issues surrounding this new phenomenon. Key features include the following. Comprehensive – The book provides a comprehensive, up-to-date look at the major issues that teachers, school administrators, counsellors, social workers, and parents need to be aware of with respect to cyberbullying identification, prevention, and response. Practical – While the information is informed by research, it is written in an accessible way that all adults will be able to understand and apply. Expertise – Justin W. Patchin and Sameer Hinduja are Co-Directors of the Cyberbullying Research Center (www.cyberbullying.us). Chapter authors represent a carefully selected group of contributors who have demonstrated both topical expertise and an ability to write about the topic in clear, easily accessible language. This book is appropriate for teachers, administrators, parents and others seeking research-based guidance on how to deal with the rising tide of cyberbullying issues. It is also appropriate for a variety of college level courses dealing with school violence and educational administration.

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bulling has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying

behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.

After a decade of educational reforms, The Challenge to Care in Schools is even more relevant now than when it was first published. In her new Introduction, Nel Noddings revisits her seminal book and places care as central to current debates on standardization, accountability, privatization, and the continuous struggle between traditional and progressive methods of education. Rather then forcing one side to yield to the other, this book advocates an alternative, "responsive system" that will allow the best ideas to flourish. In the Second Edition, Noddings once again envisions a school system built on the idea that different people have different strengths, and that these strengths should be cultivated in an environment of caring, not of competition. She suggests that if we make the responsiveness characteristic of caring more basic than accountability, we can accommodate both traditional and progressive preferences in one school system to the benefit of all . . . especially the children. Chapters address the practical and theoretical questions involved in organizing traditional and nontraditional areas of study around themes of care. Introductory chapters focus on caring in general and on the problems of liberal education, while the final chapter offers sound advice for implementing a caring curriculum in our schools. Praise for the First Edition! "A welcome addition to the often fragmented discussion of what children need and what school and education should be." —Harvard Educational Review "I recommend this book to all concerned about education, personally and/or professionally." —Journal of Moral Education "In the morass of school reform that calls for such changes as national standards, improved assessments, and new ways of organizing schooling, Noddings provides lucid thinking about the priorities we ought to consider." —Teachers College Record

This volume brings together research on cyberbullying across contexts, age groups, and cultures to gain a fuller perspective of the prevalence and impact of electronic mistreatment on individual, group, and organizational outcomes. This is the first book to integrate research on cyberbullying across three contexts: schools, workplaces, and romantic relationships, providing a unique synthesis of lifespan contexts. For each context, the expert chapter authors bring together three different 'lenses': existing research on the predictors and outcomes of cyberbullying within that context; a cross-cultural review across national borders and cultural boundaries; and a developmental perspective that examines age-related differences in cyberbullying within that context. The book closes by drawing commonalities across these different contexts leading to a richer understanding of cyberbullying as a whole and some possible avenues for future research and practice. This is fascinating reading for researchers and upper-level students in social psychology, counseling, school psychology, industrial-organizational psychology, and developmental psychology, as well as educators and administrators.

Seminar paper from the year 2014 in the subject Psychology - Social Psychology, grade: 100.00, Brigham Young University, language: English, abstract: Bullying has been around for a very long time. Methods that have been used to bully have remained constant through time. Be that as it may, a new form of bullying has arisen. This form involves the media and is labeled as cyberbullying. This essay discusses the two different styles to bullying, which are, traditional bullying, and cyberbullying. After that has been discussed, the focus of the essay will shift to the effects that bullying has brought upon youth. The main concern for the issue of bullying is that some may be committing suicide because of the endless torment. This essay discusses both sides to bullying, which are, the victim, and the bully. This is for comparing and contrasting the reasoning behind each of their reactions to their situations. Many examples of bully-related suicides will be explored and discussed. Opinions on what can be done; will be shared by both specialists, such as a psychiatrist, and certain members of the general population. This will ensure both a professional's opinion, as well as the opinions of normal citizens can be shared and reasoned. Suicide due to bullying is a problem, but not an epidemic. Youth need to be aware of how to deal with bullies, and that there is always hope. There are many organizations in the world that deal with these sorts of issues, and look to helping those who are in need of aid.

The study of cyberbullying has exploded since its first appearance in a peer-reviewed journal article in 2005. Cyberbullying: From theory to intervention aims to make clear and practical sense of this proliferation of coverage by defining the problem of cyberbullying and examining its unique features. The volume provides a thorough overview of state-of-the-art research into the phenomenon, and discusses the development and evaluation of interventions to prevent and combat it. Whereas most research papers offer limited space to describe actual intervention methods, this book provides tremendous insight into the different theoretical methods and practical strategies available to combat cyberbullying. Part One provides readers with a critical review of the existing research literature and collects insights from international researchers involved in bullying and cyberbullying research, tackling key questions such as: how is cyberbullying defined, what is the overlap with traditional bullying, and what are the negative consequences of cyberbullying? Part Two gives an overview of the development and content of evidence-based ICT interventions aimed at preventing and combating bullying and cyberbullying. In addition, some of the important outcomes of the effect evaluations will be described. This book is directed to academics, educators, and government policy-makers who are concerned about addressing emerging cyber-bullying and anti-authority student expressions through the use of cell phone and Internet technologies. There is a current policy vacuum relating to the extent of educators' legal responsibilities to intervene when such expression takes place outside of school hours and school grounds on home computers and personal cell phones. Students, teachers, and school officials are often targets of such expression. The author analyzes government and school responses by reviewing positivist paradigms. Her review of a range of legal frameworks and judicial decisions from constitutional, human rights, child protection, and tort law perspectives redirects attention to legally substantive and pluralistic approaches that can help schools balance student free expression, supervision, safety, and learning.

This book which reports on the findings of the EU Kids Online project is a vital resource in today's rapidly changing internet environment.

Directed at policy makers, legislators, educators, parents, the legal community, and anyone concerned about current public policy responses to sexting and cyberbullying, this book examines the lines between online joking and legal consequences. It offers an analysis of reactive versus preventive legal and educational responses to these issues using evidence-based research with digitally empowered kids. Shaheen Shariff highlights the influence of popular and 'rape' culture on the behavior of adolescents who establish sexual identities and social relationships through sexting. She argues that we need to move away from criminalizing children and toward engaging them in the policy development process, and she observes that important lessons can be learned from constitutional and human rights frameworks. She also draws attention to the value of children's literature in helping the legal community better understand children's moral development and in helping children clarify the lines between harmless jokes and harmful postings that could land them in jail.
