The Study of Lives reveals for the first time the extent of Henry A. Murray's considerable influence on the study of personality. Throughout his long and distinguished career, he has either trained or strongly influenced some of the world's leading psychologists, eighteen of whom have written fascinating essays for this book. The range of topics presented here is as diverse and highly original as Murray's own ideas about personality. Everyone concerned with the study of personality will find this book an excellent sampling of the best work being done in the field. "The study of lives" is a phrase Henry A. Murray has often used to describe his own work, and it suggests his central conviction that living beings must be studied as living wholes. Personality, he has repeatedly pointed out, is a dynamic process—a constantly changing configuration of thoughts, feelings, and actions occurring in a social environment and continuing throughout life. If small parts and short segments of human affairs have to be isolated for detailed scrutiny, they must still be understood as parts of a patterned organic system and as segments of a lifelong process. This has never meant for him that all research should take the form of collecting life histories, although his contributions along this line have been outstanding. It implies simply that isolating, fragmenting, and learning just a tiny bit about a lot of people tend to carry us away from what is most worth studying. The essays in this book are grouped under headings that represent some of Murray's strongest interests: His conception of personality as a dynamic process is reflected in Part I, which deals with continuities and changes in the course of life. His interest in devising procedures suitable for disclosing live feelings, fantasies, and adaptations and his insistence on the necessity for an adequate taxonomy of carefully discriminated, carefully defined variables are represented in the papers of Part II. His view that creativity is a central property of human nature has contributed to the reflections and researches that make up Part III. Finally, his concern with values—the great blind spot of traditional science but so obviously a momentous problem for contemporary lives and societies—has been taken up in several different ways by the authors of Part IV. Robert W. White was professor of clinical psychology at Harvard; he has been director of the Psychological Clinic and chairman of the Department of Social Relations. After receiving his degree in history for Harvard he taught at the University of Maine for many years before switching over to psychology.

The essential problem is the failure to recognize that controversies over risks are "normal events" in modern society and as such will be with us for the foreseeable future. Three key propositions define these events: risk management decisions are inherently disputable; public perceptions of risk are legitimate and should be treated as such; the public needs to be intensively involved in the processes of risk evaluation and management. Leiss and his collaborators chronicle these organizational risks in a set of detailed case studies on genetically modified foods, cellular telephones, the notorious fuel additive MMT, pulp mill effluent, nuclear power, toxic substances legislation, tobacco, and the new type of "moral risks" associated with genetics technologies such as cloning. Contributors include Debora L. Van Nijnatten (Sir Wilfred Laurier University), Michael D. Mehta (University of Saskatchewan), Stephen Hill (University of Calgary), Éric Darier (Greenpeace), Greg Paoli (Decisionalysis Risk Consultants, Inc.), and Peter V. Hodson (Queen's University).

Latin American women have long written essays on topics ranging from gender identity and the female experience to social injustice, political oppression, lack of educational opportunities, and the need for female solidarity in a patriarchal environment. But this rich vein of writing has often been ignored and is rarely studied. This volume of twenty-one original studies by noted experts in Latin American literature seeks to recover and celebrate the accomplishments of Latin American women essayists. Taking a variety of critical approaches, the authors look at the way women writers have interpreted the essay genre, molded it to their expression, and created an intellectual tradition of their own. Some of the writers they treat are Flora Tristan, Gertrudis Gómez de Avellaneda, Clorinda Matto de Turner, Victoria Ocampo, Alfonsina Storni, Rosario Ferré, Christina Peri Rossi, and Elena Poniatowska. This book is the first of a two-volume project that will reexamine the Latin American essay from a feminist perspective. The second volume, also edited by Doris Meyer, contains thirty-six essays in translation by twenty-two women authors.

Infused with wisdom and a strong dose of humor, Making Hostile Words Harmless offers therapists and their clients a unique collection of effective exercises and bully-busting responses guaranteed to diffuse difficult exchanges. Luc and Dan, two high school students at a Denver boys' school, meet in the late 1970's during the glitz and glitter of the disco era, and despite society's censure of gay love, they, with the help of Luc's ex-marine aunt, become enamored with each other. Oh, Danny Boy vividly describes their passion as it evolves into an intense love for each other while they become mature young men. This story of their lives is set in Colorado, New Orleans, and Hawaii, as well as San Francis

There have been several scientific books and lecture papers written on the subject of our holographic universe but none have gone far enough as to expand peoples thinking and explain the true nature of reality. Music is a natural consequence of the pure mathematics within nature. Music is a true universal language as Music is vibrational physics and mathematics that is a language understood by the human mind. The silent music of the universe or Aether Physics from the RG Veda is the only ONE science that explains the true perfection of creation and our connection to the holographic universe. Quantum Metrics are from the RG Veda: Quantum Physicist already knowing the answer as they have taken it the RG Veda then creates complicated elongated mathematical equations to derive at their Metric, which they name after themselves. I explain how to calculate all 90 metrics contained in RG Veda using a dividend and divisor and how to apply this system of harmony to devices you can manufacture such as electric motors. I would not dare name any of the yet "undiscovered" Metrics after myself, as no man should claim Gods work as his own. Although I have examples of the RG Vedas and other sources mentioning the Vedic Meter no one to my knowledge as given a full interpretation of them and what they relate to as I have done. I have deciphered and attempted to simplify one of the most ancient of mysteries and show how to apply it. My intention in releasing this information is to enlighten humanity as to assist

in the rebuilding of the foundations of science for the advancement of all. We all must aspire to a brighter future and not allow this information to remain the industrial secret of occult societies. These societies have handicapped humanity for long enough and it is time to enter into the light from the darkness and advance our civilization. The zenith is the point in the sky or celestial sphere directly above an observer. God, sees all life in all dimensions and knows all of us, we should all strive for Krsna Consciousness and free ourselves from the illusion of our material world. When there is harmony between the mind, heart and resolution then nothing is impossible.

The Longest Journey is a bildungsroman by E. M. Forster, first published in 1907. It is the second of Forster's six published novels, following *Where Angels Fear to Tread* (1905) and preceding *A Room With A View* (1908) and *Howards End* (1910). It has a reputation for being the least known of Forster's novels, but was also the author's personal favourite and one of his most autobiographical. It is the only one of Forster's novels not to have received a film or television adaptation.

This book contains letters that show why a teacher's success depends on a permanent commitment to learning and training, as part of an ongoing appraisal of classroom practice. It challenges all teachers to reflect critically on the meaning of the act of teaching as well as the meaning of learning.

The development of the dialogical approach, the autobiographical perspective and the central role of text-interpretation are all seen as characteristics of post-modern ethnography, arising from the daily chores of field research. The breakthrough into time and history, away from the timeless theorizing of structuralism and functionalism, is seen as inevitable when anthropology is forced to think about its own epistemology. Another current concern is taken up with reflections on the politics of representing the other. In the later essays, he opposes post-modern fashions and re-asserts the need to continue with a truly critical agenda.

In this path-breaking and controversial book, Harry Redner provides a systematic study of how the epistemologically interesting features of contemporary science are to be understood. Taking "science" to include knowledge from the social sciences and humanities as well as the physical sciences, Redner shows how the history of science, philosophical

theory, and current scientific research reveal connections between scientific developments and features of the social organization of science. Redner argues that the shift from Classical science to a more complex and less orderly World science after World War II has changed the way scientific research is done and how its knowledge is organized. His aim, however, "is not merely to interpret science, but to change it." Thus, this examination is more than a survey and critique—it is a positive program for the development of future science. Remarkable for its breadth and insight, the book is especially valuable for its discussions of authority and social organization (with the accompanying themes of academic politics, competition, power, and corruption) and for its catalog of the various contemporary critiques of science. Some of these are European in origin and will be new to many U.S. readers. A tour de force on several levels, this book is essential reading for scientists, philosophers, sociologists of science, historians of ideas, critics of contemporary culture and, indeed, for anyone who takes a serious interest in scientific research and higher learning.

This highly readable handbook synthesizes the best research on K-8 literacy instruction and distills key implications for classroom practice. 'Who gave the drugs to the Beatles? I didn't invent those things. I bought it from someone who got it from somebody. We never invented the stuff.' – John Lennon Riding So High charts the Beatles' extraordinary odyssey from teenage drinking and pill-popping, to cannabis, LSD, the psychedelic Summer of Love and the darkness beyond. Drugs were central to the Beatles' story from the beginning. The acid, pills and powders helped form bonds, provided escape from the chaos of Beatlemania, and inspired colossal leaps in songwriting and recording. But they also led to break-ups, breakdowns, drug busts and prison. The only full-length study of the Beatles and drugs, Riding So High tells of getting stoned, kaleidoscope eyes, excess, loss and redemption, with a far-out cast including speeding Beatniks, a rogue dentist, a script-happy aristocratic doctor, corrupt police officers and Hollywood Vampires. 'The deeper you go, the higher you fly...'
