This sixth and final volume in John Pocock's acclaimed sequence of works on Barbarism and Religion examines Volumes II and III of Edward Gibbon's Decline and Fall of the Roman Empire, carrying Gibbon's narrative to the end of empire in the west. It makes two general assertions: first, that this is in reality a mosaic of narratives, written on diverse premises and never fully synthesized with one another; and second, that these chapters assert a progress of both barbarism and religion from east to west, leaving much history behind as they do so. The magnitude of Barbarism and Religion is already apparent. Barbarism: Triumph in the West represents the culmination of a remarkable attempt to discover and present what Gibbon was saying, what he meant by it, and why he said it in the ways that he did, as well as an unparalleled contribution to the historiography of Enlightened Europe.

From the Sound FX Intro: The most important music of our time is recorded music. The recording studio is its principle musical instrument. The recording engineers and music producers who create the music we love know how to use signal processing equipment to capture the work of artists, preserving realism or altering things wildly, as appropriate. While the talented, persistent, self-taught engineer can create sound recordings of artistic merit, more productive use of the studio is achieved through study, experience and collaboration. This book defines the technical basis of the most important signal processing effects used in the modern recording studio, highlights the key drivers of sound quality associated with each, shares common production techniques used by recording engineers with significant experience in the field, references many of the touchstone recordings of our time, and equips the reader with the knowledge needed to comfortably use effects devices correctly, and, more importantly, to apply these tools creatively.
