

Decisions And Revisions The Planning Strategies Of A

Every 15 years, the Forest Service (FS) develops a land and resource mgmt. plan which spells out how the agency intends to protect the lands and resources that it manages and to provide products and services to the public. This report discusses: the views of the FS and other Fed. agencies on the key elements that Broad-Scale Assessments (BSA) should contain to maximize their value to the forest planning process; the extent to which the FS has incorp. these elements into the Great Lakes Ecol. Assess. and whether it has integrated the BSA into the forest planning process; and the extent to which the FS's proposed planning reg's. ensure that future BSA contain these elements. Illustrated.

In logistics systems, the issue of planning stability has attracted increased attention and interest in recent years. This is mainly due to an increasing integration of planning systems both within and across companies in supply chain management. The propagation of adjustments in planning systems first acquired wide attention when MRP systems were employed as standard planning tools for material coordination. Within a rolling horizon framework the MRP application produced considerable planning instability which origins from uncertainties in the planner's exogenous environment as well as from endogenous sources. This book presents an analytical investigation that gives deep insight into the influence of different kind of inventory control rules on the stability of material planning systems under stochastic demand in a rolling horizon environment.
