There have been exciting developments in the area of knot theory in recent years. They include Thurston's work on geometric structures on 3-manifolds (e.g. knot complements), Gordon-Luecke work on surgeries on knots, Jones' work on invariants of links in S^3 , and advances in the theory of invariants of 3-manifolds based on Jones- and Vassiliev-type invariants of links. Jones ideas and Thurston's idea are connected by the following path: hyperbolic structures, $PSL(2, \mathbb{C})$ representations, character varieties, quantization of the coordinate ring of the variety to skein modules (i.e. Kauffman, bracket skein module), and finally quantum invariants of 3-manifolds. This proceedings volume covers all those exciting topics.

Intended to refresh the basics of Delphi as well as advance your knowledge to the next level, it is assumed you will know RAD studio and the Object Pascal language. However, if you are not an experienced RAD studio programmer this accessible guide will still develop those initial crucial skills.

Have you ever wanted to write a computer program in which one computer could talk to another? Or perhaps you wanted to write a program which measured an event within a fraction of a second? Well this book shows you how to do this, using the Delphi programming language. After reading it you'll know not only know more about Delphi, but you will understand the basics of many computer applications. It covers the basics of the programming environment, and then extends this to show important applications, such as networking, data communications, operating system interfacing, and event timing. Perhaps even you wanted to write a program which give you the full power of the Windows operating system? Well it is here too, in the form of API calls.

Due to a historical lack of attention to the importance of modelling, measuring and managing risk, senior bank leaders are struggling to implement unified practices within their financial institutions that could address the gaps posed by risky management behaviour, rogue trading, liquidity crises, prohibited investments in mortgage-backed securities, and default risks aligned with loans. This book discusses the theories at play between bank agents (bank managers) and their principals (shareholders), a topic which has gained importance as a result of the banking crisis, and similarly, governed the need for more efficient risk management and ethical managerial practices. The author worked with a senior bank leadership team to identify and describe effective capital regulation practices that can lead to a reduction in loss and risky management behavioural practices. The book offers consensus on a number of activities that bank managers can implement to address bank risk. It analyses the relevant factors that determine the necessity for banking regulation and the important role of regulation in managing banking crises. The author's analysis of the important regulatory aspects in developed countries such as the US, offers a useful conceptual framework for creating an adequate banking regulatory environment in developing countries. This book offers an original contribution to the field of banking that undergraduate, masters, PhD students, academics and researchers can use to gain a deeper understanding of the constructs at play in the banking industry.

Based on the most frequently asked questions tracked by members of the Borland technical support staff, this book aims to cover the most problematic areas for Delphi programmers, with strong coverage of database programming, including SQL and client/server programming. The two volumes IFIP AICT 478 and 479 constitute the refereed post-conference proceedings of the 9th IFIP WG 5.14 International Conference on Computer and Computing Technologies in Agriculture, CCTA 2015, held in Beijing, China, in September 2015. The Delphi Technique in Nursing and Health Research is a practical guide to using the Delphi methodology for students and researchers in nursing and health. It adopts a logical step-by-step approach, introducing the researcher to the Delphi, outlining its development, analysing key characteristics and parameters for its successful use and exploring its applications in nursing and health. The book addresses issues of methodology, design, framing the research question, sampling, instrumentation, methodological rigour, reliability and validity, and methods of data analysis. The Delphi Technique in Nursing and Health Research enables the reader to

be aware of the limitations of the technique and possible solutions, to design a Delphi questionnaire for each of the different rounds of a study, to consider different approaches to the technique in relation to a study, to analyse the data from each round of a Delphi study, and to understand the importance of feedback between rounds. Key Features A practical guide to facilitate use of the Delphi technique Provides the reader with the necessary information to participate in and conduct Delphi studies Examines different types of Delphi, including the e-Delphi, and modifications made to the technique Includes examples of real empirical investigations, brief case scenarios and key learning points for each chapter Explores the role of the Delphi researcher Explores ethical issues and issues of anonymity, use of experts and controlled feedback

Drawing on macro-historical sociological theories, this book traces the development of intellectual property as a new type of legal property in the modern nation-state system. In its current form, intellectual property is considered part of an infrastructure of state power that incentivizes innovation, creativity, and scientific development, all engines of economic growth. To show how this infrastructure of power emerged, Laura Ford follows macro-historical social theorists, including Michael Mann and Max Weber, back to antiquity, revealing that legal instruments very similar to modern intellectual property have existed for a long time and have also been deployed for similar purposes. Using comparative and historical evidence, this groundbreaking work reflects on the role of intellectual property in our contemporary political communities and societies; on the close relationship between law and religion; and on the extent to which law's obliging force depends on ancient, written traditions.
