Clinicians' empathy is increasingly understood as a professional competency, a mode and process of relating that can be learned and taught. Communication and empathy training are penetrating healthcare professions curricula as knowledge about the most effective modalities to train, maintain, and deepen empathy grows. This book draws on a wide range of contributors across many disciplines, and takes an evidence-based and longitudinal approach to clinical empathy education. It takes the reader on an engaging journey from understanding what empathy is (and how it can be measured), to approaches to empathy education informed by those understandings. It elaborates the benefits of embedding empathy training in graduate and post-graduate curricula and the importance of teaching empathy in accord with the clinician's stage of professional development. Finally, it examines systemic perspectives on empathy and empathy education in the clinical setting, addressing issues such as equity, stigma, and law.

Perspectives among the interdisciplinary chapters include: Neurobiology of empathy Measuring empathy in healthcare Teaching clinicians about affect Teaching cultural humility: Understanding the core of others by reflecting on ours Empathy and implicit bias: Can empathy training improve equity? Critical Issues in Education examines three questions that are at the core of the education debate in the United States: What interests should schools serve? What knowledge should schools teach? How do we develop the human environment of schools? When answering these queries the authors advocate the use of critical thinking, which includes dialogue and dialectic reasoning. Dynamic and interactive, dialogue requires listening and assessment, while dialectic stimulates the development of a creative response that encompasses both sides of an issue. When applied, these approaches engender an informative and stimulating discussion. In order to explore the depth of current educational issues, the Ninth Edition considers 15 topics, providing supporting evidence and reasoning for two divergent views. These issues include violence in schools, the role of technology, gender equity, multiculturalism, inclusion and disability, and school choice. Both civic and professional discussions regarding improvements will have consequences for students, teachers, and society. As a result, educational views and the social landscape in which they reside deserve critical study.
