Aviation-related regulations are spread out in several volumes of documents published by various agencies. Pilots, Air Traffic Controllers, Flight Dispatchers and other personnel associated with flight operations have to refer to numerous ICAO, Government of India, DGCA and Airport Authority of India publications to prepare for examinations and for handling day-to-day situations. It is not easy to access and correlate information contained in these publications. With his background as an Air Force Officer and Instructor, Indira Gandhi Rashtriya Uran Akademi, the author have attempted to compile and blend together useful information on Air regulations to make it easy to be referred by the personnel concerned. The compilation will be useful for CPL (Air Regulations), Air Traffic Controller and Flight Dispatcher examinations. Airframes & Systems, Electrics, Powerplant, and Emergency Equipment (ASEPE) - Aeroplanes, subject 021, covers a broad swathe of information that is examined in one paper. To make this information manageable, the 021 subject is broken down into three volumes; these are Airframes & Systems [which incorporates Emergency Equipment], Electrics, and Powerplant. Airframes & Systems provides a good grounding in the technical aspect of an aircraft's structure and systems, detailing, for examination purposes where required, the regulations that the student has to know and the methods by which these requirements are met. As with other subjects, there will always be areas that the student has studied that are not questioned in the exam. Learning this information is not effort wasted, as the information given within the volume provides the foundation knowledge on which the type rating course can be built.

The Federal Aviation Administration (FAA) has published the Private Pilot - Airplane Airman Certification Standards (ACS) document to communicate the aeronautical knowledge, risk management, and flight proficiency standards for the private pilot certification in the airplane category, single-engine land and sea; and multiengine land and sea classes. This ACS incorporates and supersedes the previous Private Pilot Practical Test Standards for Airplane, FAA-S-8081-14. The FAA views the ACS as the foundation of its transition to a more integrated and systematic approach to airman certification. The ACS is part of the safety management system (SMS) framework that the FAA uses to mitigate risks associated with airman certification training and testing.

Specifically, the ACS, associated guidance, and test question components of the airman certification system are constructed around the four functional components of an SMS: Safety Policy that defines and describes aeronautical knowledge, flight proficiency, and risk management as integrated components of the airman certification system; Safety Risk Management processes through which internal and external stakeholders identify and evaluate regulatory changes, safety recommendations and other factors that require modification of airman testing and training materials; Safety Assurance processes to ensure the prompt and appropriate incorporation of changes arising from new regulations and safety recommendations; and Safety Promotion in the form of ongoing engagement with both external stakeholders (e.g., the aviation training industry) and FAA policy divisions. The FAA has developed this ACS and its associated guidance in collaboration with a diverse group of aviation training experts. The goal is to drive a systematic approach to all components of the airman certification system, including knowledge test question development and conduct of the practical test. The FAA acknowledges and appreciates the many hours that these aviation experts have contributed toward this goal. This level of collaboration, a hallmark of a robust safety culture, strengthens and enhances aviation safety at every level of the airman certification system.

This text contains an integrated bound-in CD-ROM, and has a strong emphasis on design. Its active visual approach and inclusion of space-orientated engineering make it an interesting examination of the aerospace engineering field.
