This book makes Hazardous or Electrical Area Classification simple. In plants processing flammable materials, every effort is made to avoid the escape of such materials and in addition, stringent measures are taken to exclude sources of ignition. A complex array of standards surround this topic which has led to an overly conservative approach being taken. This type of approach means that much more expensive electrical apparatus than is necessary is installed. To avoid this unnecessary expenditure, Dr Groh clearly explains the relevant standards, so that accurate assessment of the risks associated with hazardous

areas is possible. He also identifies possible ignition sources and methods of designing apparatus which do not cause sparks thereby maintaining safety. * Covers must-have information regarding IEC/CENELEC standards in electrical or hazardous area classification * Provides a clear overview of a complex area

Tony Hart's life has been quiet lately. He has good friends and a rewarding teaching job. Then the murdered body of another teacher falls into the elevator at his feet, and Tony's life gets a little too exciting. Jared MacLean is a homicide detective, a widowed father, and deeply in the closet. But from the moment he meets Tony's blue eyes in that high school hallway, Mac can't help wanting this man in his life. However Mac isn't the only one with his eyes on Tony. As the murderer tries to cover his tracks, Mac has to work fast or lose Tony, permanently.

"In the post-9/11 struggle for a sane global vision, this antihatred manifesto could not be more timely."--O: The Oprah Magazine In this acclaimed volume, Pulitzer-Prize nominated science writer Rush W. Dozier Jr. demystifies our deadliest emotion--hate. Based on the most recent scientific research in a range of fields, from anthropology to zoology, *Why We Hate* explains the origins and manifestations of this toxic emotion and offers realistic but hopeful suggestions for defusing it. The strategies offered here can be used in both everyday life to

improve relationships with family and friends as well as globally in our efforts to heal the hatreds that fester within and among nations of the world.

Speech software has been a hot topic in the computer industry for as long as there have been computers. Computer speech has been around in one form or another for over 30 years, but early speech software could only run on very big and expensive computer hardware. Thanks to Microsoft, the size of your computer is no longer a major limitation to computer speech. Just like with so many other computer technologies, it took Microsoft to make speech software easy to program, and even easier for PC users to use speech to control their Windows software applications. With Windows Visual Basic ActiveX Voice Control Automation Services, Speech API (SAPI) and Speech Suite Software Development Kit (SDK), complex computer speech synthesis, and even speech recognition, has become more accessible to all programmers for use in their multimedia business, education and recreational applications. This book offers the reader a detailed exploration of Windows Speech Automation Services via Visual Basic ActiveX Voice Controls available in MS Speech API Versions 4.0 to 5.1, as well as third-party SAPI vendor SDKs such as IBM ViaVoice and Dragon NatSpeak. It provides a thorough introduction to Windows Speech Recognition Programming for beginning as well as advanced programmers.

A clear-eyed look at the instrumental role drugs have played in our cultural, social, and spiritual development. • First American publication of the surprising European bestseller. • Examines everything from the ancient use of ergot and datura to the modern phenomenon of "designer" drugs such as Ecstasy and crack cocaine. From remotest antiquity to the present era of designer drugs and interdiction, drugs have played a prominent role in the cultural, spiritual, and social development of civilizations. Antonio Escohotado demonstrates how the history of drugs illuminates the history of humanity as he explores the long relationship between mankind and mind-altering substances. Hemp, for example, has been used in India since time immemorial to stimulate mental agility and sexual prowess. Aristotle's disciple Theophrastus testifies to the use of datura by the ancient Greeks and further evidence links the rites at Eleusis to the ingestion of a hallucinogen. Similar examples can be found in cultures as diverse as the Celts, the ancient Egyptians, the Aztecs, and other indigenous peoples around the world. Professor Escohotado also looks at the present-day differences that exist between the more drug-tolerant societies like Holland and Switzerland and countries advocating complete repression of these substances. The author provides a comprehensive analysis of the enormous social costs of the drug war that is coming under increasing fire from all levels of society. Professor

Escotado's work demonstrates that drugs have always existed and been used by societies throughout the world and the contribution they have made to humanity's development has been enormous. The choice we face today is to teach people how to use them correctly or to continue to indiscriminately demonize them. "Just say no," the author says, is not an option. Just say "know" is. Antonio Escotado is a professor of philosophy and social science methodology at the National University of Distance Education in Madrid, Spain. He travels widely, offering lectures and seminars on the subject of drugs and history.

Hailed by advance reviewers as "a kinder, gentler P. Chem. text," this book meets the needs of an introductory course on physical chemistry, and is an ideal choice for courses geared toward pre-medical and life sciences students. Physical Chemistry for the Chemical and Biological Sciences offers a wealth of applications to biological problems, numerous worked examples and around 1000 chapter-end problems. Master storytellers Robin McKinley and Peter Dickinson share tales of mysterious merfolk and magical humans, all with close ties to the element of water. From Pitiable Nasmith's miserable existence in a seaside town whose inhabitants are more intertwined with the sea than most people know, to Tamia's surprising summons to be the apprentice to the Guardian who has the power to hold back the sea, each of the six stories illuminates a captivating world filled with adventure, romance, intrigue, and enchantment. Robin McKinley fans will recognize one of the worlds included—Damar, the setting of Newbery Medal winner *The Hero and the Crown* and Newbery Honor Book *The Blue Sword*.

An independent book written and self-published by former math teacher and private math tutor Larry Zafran. Students are justified in proclaiming that "math is hard," but there is a specific reason why they feel this way. The author maintains that the struggle

can be lessened by following the roadmap presented, but it will take time and effort on the part of the student. Since math is often not properly taught, it is often not properly learned. Anything that hasn't truly been learned, regardless of subject, is "hard." Once the various concepts are more secure, and the student's gaps in understanding have been addressed, math will have been made "a bit easier" as promised by the book's title. However, the book does not imply that learning math is fast, fun, or easy. Most of the book's content is comprised of the roadmap of topics for a student to work through at his/her own pace. Like all paths, it begins at the beginning, in this case starting with a review of basic arithmetic, followed by basic operations, negative numbers, fractions, decimals, percents, and basic probability and statistics. This is the foundation of all math. The space devoted to each topic is proportional to how difficult most students find the topic, as well as how important the topic is in preparation for later math studies. The material is explained conversationally and "in plain English" as promised by the book's subtitle, without talking down to the reader, and without the use of contrived examples or cartoonish illustrations. The book concludes with a chapter on how to effectively study math and improve scores on exams. Like the rest of the book, the chapter takes a unique standpoint on the matter, and offers suggestions which include how to get oneself into the proper mental and emotional mindset for being successful with math. Discusses the importance of civil engineering in the history of civilization, explores problems civil engineers face each day, and outlines some modern accomplishments in

the field.

Tom and Octavia Fleming glitter among the chattering classes of London in the late 1990's. Tom, a brilliant political strategist, and Octavia, an equally talented charity consultant, appear to have it all—good looks, money, success, and three pretty children—everything but precious time together. When Octavia realizes that Tom is having an affair, she plots her revenge against her husband. But nothing prepares Octavia for the identity of Tom's mistress, and her misdemeanors hardly compare to the revenge enacted by the other woman after Tom calls it off. Described by Dominick Dunne as a writer "with verve and heart, immersing the reader in a world of engrossing and unforgettable glamour and passion," and praised by Barbara Taylor Bradford as "marvelously engrossing," Penny Vincenzi has been captivating European and American audiences ever since the publication of her *Spoils of Time* trilogy. Packed with twists and turns, *Almost a Crime* continues the tradition of the thrilling Vincenzi bestseller.

Following a unique approach, this innovative book integrates the learning of numerical methods with practicing computer programming and using software tools in applications. It covers the fundamentals while emphasizing the most essential methods throughout the pages. Readers are also given the opportunity to enhance their programming skills using MATLAB to implement algorithms. They'll discover how to use this tool to solve problems in science and engineering.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of

researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

The wetlands of the San Juan Basin in Central Veracruz, Mexico, have been a favored place since the fifth century A.D., when Prehispanic people built an extensive network of canals and raised fields that allowed for almost year-round agriculture. Alfred Siemens' discovery of the remains of this network in the 1970s led him to uncover fifteen centuries of land-use history in the region. This book contains a full record of his findings. Siemens organizes his history of the San Juan Basin around the question: What relationships exist between Prehispanic agriculture and the production systems of the tropical lowlands in our own time? This focus allows him to

chart the changes in human perceptions and uses of the landscape, from the Prehispanic wetland agricultural system to the drained pastures of today's cattle ranches. Amplified with air oblique photography, maps, and tables, and enriched with data from archaeology and colonial archives, this is an authoritative historical geography of a wetland landscape. Or, in the author's more modest words, "It seems to me that what I have here is a biography of a swamp."

In the first installment of the *A Fire Beneath the Skin* trilogy, the city of Klaar has never fallen. No enemy has ever made it across the Long Bridge or penetrated the city's mighty walls. Even when a powerful invading army shows up at the gates, the duke and his daughter, Rina Veraiin, are certain that it poses little threat. But they are cruelly betrayed from within and, in a horrific spasm of violence, the city is brought to its knees. With the help of her bodyguard, Kork, the battle-trained young Rina narrowly escapes the slaughter and makes her way to the lair of an ancient sorcerer--the Ink Mage--who gifts her with a strange, beautiful set of magical tattoos. Now a duchess in exile, Rina sets out on a quest to reclaim what is rightfully hers, aided by a motley assortment of followers who will help her in her cause--some for noble reasons and others for their own dark purposes. With the enemy's agents nipping at her heels, Rina must learn to harness her new and startling magical powers if she is to assert her rightful place as ruler of Klaar.

The Transplant offers an insightful account of two young people living in United States illegally. Witty and tragic, it portrays their endless and fruitless pursuit of legalization. Agata, a young Polish au-pair who arrives in the United States in the late 1990's, strives to maintain her legal status through hard work but, due to a fateful event, finds herself unable to do so. Faced with dangerous circumstances and few if any options, she flees from her host family only to find herself living and working illegally. Eventually she meets Mario. His single minded devotion to his ailing mother led him to risk his life and cross the border so that he could earn enough money to pay for the kidney transplant that would save her life. With the birth of their daughter Adriana and the need to ensure that their family stay intact, Agata and Mario become painfully aware of the need for legalization and attempt to gain legal status by any means.

Two slave narratives that document the experiences of runaway slaves who managed to reach the protection of Union forces are accompanied by biographies of both men that reconstruct their childhoods, escape, Civil War service, and successful later lives. There was a time when magic was welcome in the country of Chahir, but that was nearly two centuries ago. Now, all forms of magic are strictly forbidden. Anyone caught using magic, or possessing magical abilities, are immediately imprisoned and executed. For Garth, that policy is a problem. As Garth approaches his sixteenth birthday, he realizes that he definitely has magical abilities. What's worse, he has no control over them. In order to stay alive, he only has one choice—he must leave his homeland, Chahir, and flee into the neighboring country, Hain. The journey isn't an easy one; he still has to make it out of Chahir without alerting anyone as to his abilities. What Garth doesn't know is that getting to Hain, and the Academy for All Magic, is going to be the easy part. Garth goes into Hain for one reason only; he wants training for his out-of-control magical powers. So how does he become a member of an exclusive magical clan known as the Jaunten; adopted by a magically enhanced colt; best friends with a gifted Witch; and foster brother of a four year old Mage? Let's just say he has a gift for finding trouble.

Two years after having survived a plane crash into the Canadian wilderness, a sixteen-year-old returns to the wild to befriend a wounded dog and hunt a rogue bear.
