Instructor Resources: PowerPoint slides, discussion questions, and mini-cases for breakout group analysis. Through a series of timely and relevant cases based on real-life experiences, this book explores the kinds of management dilemmas and moral challenges that confront healthcare managers on a day-to-day basis. Good management requires making morally sound decisions and understanding the ethical implications for your organization, community, patients, and your career. In this updated edition, readers will explore the interrelatedness of ethics and management and common barriers to ethical decisions. In-depth analyses of cases and strategic discussions bring to life these complex issues: Diversity management Information technology Disaster planning Medical errors Physician impairment Conflict of interest Sexual harassment and gender discrimination Workforce reduction Mergers Conflicting moral demands This practical guide gives direction and guidance to help healthcare managers at all levels of the organization build an ethical culture, advocate a business case for ethics that addresses structural issues, and adopt an ethical decision-making model for the organization.

Healthcare organizations strive to keep pace with breakthroughs in medical science and technology, transparency of service outcomes, an educated customer base, global health threats, and federal regulations. As these elements continue to evolve, organizations are tasked with employing well-trained, dynamic healthcare managers to lead in a time of perpetual transformation. Dunn & Haimann's Healthcare Management provides a definitive overview of healthcare management, organized around five primary functions: planning, organizing, staffing, influencing, and controlling. The book ties these primary functions together through clear explanations of management theories, tools, and other foundational information. It also explores the role of supervisors, behavioral factors, and generational stimuli that motivate employees within the conceptual framework of managing. New features at the end of most chapters, including additional readings, classroom activities, and case study recommendations, reinforce the concepts presented. A healthcare system will always be better positioned to grow and adapt if its managers have mastered the primary functions covered in this book.

Instructor Resources: Test bank, PowerPoint slides, and answers to end-of-chapter discussion questions In healthcare, strong leadership is crucial. Today's volatile and ever-changing environment calls for a new set of leadership skills. As cost reduction, quality improvement, and management of scarce resources become increasingly important, healthcare leaders must know how to build a positive culture, manage change and conflict, establish trust, promote creativity and innovation, and empower every staff member in their organization to succeed. Principles of Healthcare Leadership provides complete coverage of the topics most vital to the success of a healthcare leader. Beginning with foundational leadership theory, including a discussion of power and influence, the book then explores distinct leadership styles and skills, the importance of organizational culture building, and strategies for leading people in healthcare delivery. Additional key topics include: Creativity and innovation Entrepreneurship Trust Change and conflict Leadership development and trends Team performance End-of-chapter summaries and discussion questions allow students to review and apply each chapter's concepts while they learn. Five comprehensive leadership case studies provide opportunities to integrate and apply skills featured in the book. The future of healthcare is now, and this book will guide leaders, current and future, as they manage daily change and growth in their redesigned healthcare organization. This book provides students and practitioners with perspectives on the management of recreational therapy heretofore unavailable to them. Many of the management concepts apply to middle level managers, but the focus of the book is on first-line recreational therapy managers and the areas of management identified by the National Council on Therapeutic Recreation Certification (NCTRC). In-depth coverage is given to the five basic functions of management: planning, organization, staffing, influencing, and controlling. In addition, chapters are provided on key concepts integral to the management of recreational therapy programs. Included are chapters on internship supervision, clinical supervision, volunteer management, and managing marketing. The final chapter, Issues and Concerns for Managers, is unique in that it contains areas of substantial importance to managers that have received little attention in the recreational therapy literature. The format for the book is readable and easy to follow. Each chapter lists objectives for the chapter, gives definitions of key terms used within the chapter, and ends with a conclusion or summary of the chapter.

In Psychology and Human Performance in Space Programs: Research at the Frontier, leading space researchers from multiple fields of expertise summarize the recent growth of knowledge, the resulting tools and techniques, and the research still needed to protect humans in space. Making use of cutting-edge research and development related to composing, training, and supporting astronaut crews who will live and work together for future missions to Mars, this book examines the current practices of leaders in the field both at NASA and in academia. Presenting astronaut data alongside data from analogous extreme environments such as mission simulation habitats, this volume helpfully contrasts and compares to examine the lessons that can be learned from other approaches. Using the context of current International Space Station missions, the book discusses the influence of human factors and physiological health on individual and team job performance and social cohesion. With an overview of the physical and psychological hazards of space, and the challenges posed by conducting space-related applied psychology research, this volume uses the context of a long-duration Mars mission as a lens through which to discuss adaptation and resilience, technical and team training, technological advances related to working and living in space, and human interaction with onboard systems. Additionally, the book includes an essay from retired astronaut Clay Anderson on his experiences in space and thoughts on future missions to the moon and Mars. This first of two volumes will be of interest to professionals in the field of human factors and psychology at work, as well as academics examining human performance in extreme environments and aerospace.
