The acclaimed bestseller--a selection of Oprah's Book Club--that brings vividly to life the Georgetown neighborhood of Washington, DC, circa 1925, a community reeling from a young girl's tragic death. Five-year-old Clara Bynum is dead, drowned in the Potomac River in the shadow of a seemingly haunted rock outcropping known locally as the Three Sisters. *River, Cross My Heart*, which marks the debut of a wonderfully gifted new storyteller, weighs the effect of Clara's absence on the people she has left behind: her parents, Alice and Willie Bynum, torn between the old world of their rural North Carolina home and the new world of the city, to which they have moved in search of a better life for themselves and their children; the friends and relatives of the Bynum family in the Georgetown neighborhood they now call home; and, most especially, Clara's sister, ten-year-old Johnnie Mae, who must come to terms with the powerful and confused emotions stirred by her sister's death as she struggles to decide what kind of woman she will become. This highly accomplished first novel resonates with ideas, impassioned lyricism, and poignant historical detail as it captures an essential part of the African-American experience in our century.

Many macro and micro species, from terrestrial and aquatic environments, produce structurally unique compounds and, in many countries, still are the primary sources of medicines. In fact, secondary metabolites are an important source of chemotherapeutic agents but are also lead compounds for synthetic modification and the optimization of biological activity. Therefore, the exploitation of secondary metabolites, or their inspired synthetic compounds, offers excellent opportunities for the pharmaceutical industry. This Medicines Special Issue focuses on the great potential of secondary metabolites for therapeutic application. The Special Issue contains 16 articles reporting relevant experimental results, and an overview of bioactive secondary metabolites, their biological effects, and new methodologies that improve and accelerate the process of obtaining lead compounds with regard to new drug development. We would like to thank all 83 authors, from all over the world, for their valuable contributions to this Special Issue.
