

Earth Interstellar Proxy War

A near-future Earth has shaken off the devastating colonization by alien Lokaran invaders and totalitarian rule by the alien's puppets, the Earth First party. But now Earth is flung into galactic intrigue and war. The Lokaron empire teeters on the edge of a fratricidal meltdown and a cabal of ancient enemies hope to use Earth as a proxy to destroy the empire and rule over a new Galactic dark age. Now Captain Andrew Roark, the son of heroes of the rebellion and an officer trained in Lokaran space warfare tactics, joins with a highly capable Lokar who opposes the empire but wishes to see it transformed rather than destroyed. Together they must uncover a conspiracy to control Earth, and then obtain the secret key to defeating it. War for galactic control looms, and freedom for Earth—so recently escaped from under the boot-heel of one oppressor—is once again in the balance. It is the 22nd Century and mankind has achieved wormhole space travel; colonizing several nearby planets in the Milky Way galaxy. The United Star Systems now struggles to provide a unified system of government for Earth and its colonies amidst civil war, rampant piracy, and slaver raids. Meanwhile, Kaleb Taylor, an ordinary kid from a farming colony, is placed directly into the mayhem of the interstellar conflict against his will. With his home destroyed and no other options but to enlist in the United Star Systems military, he volunteers to undergo the most intense training available in order to become a Recon Marine. Soon thereafter, Kaleb and his elite platoon find themselves on the high-tech front lines of battle with a new, powerful, intergalactic enemy that threatens to destroy all of humanity. Earth and the colonial governments must now decide whether to set aside old grudges and unite under the United Star Systems banner to defend against this mysterious enemy, or face certain annihilation. " ... Concise explanations and descriptions - easily read and readily understood - of what we know of the chain of events and processes that connect the Sun to the Earth, with special emphasis on space weather and Sun-Climate."--Dear Reader.

The first novel in the Poseidon's Children series from the acclaimed author of the Revelation Space series. One hundred and fifty years from now, Africa has become the world's dominant technological and economic power. Crime, war, disease and poverty have been practically eliminated. The Moon and Mars are settled, and colonies stretch all the way out to the edge of the solar system. And Ocular, the largest scientific instrument in history, is about to make an epochal discovery... Geoffrey Akinya wants only one thing: to be left in peace, so that he can continue his long-running studies into the elephants of the Amboseli basin. But Geoffrey's family, which controls the vast Akinya business empire, has other plans for him. After the death of his grandmother Eunice—the erstwhile space explorer and entrepreneur—something awkward has come to light on the Moon, so Geoffrey is dispatched there to ensure the family name remains untarnished. But the secrets Eunice died with are about to be revealed—secrets that could change everything...or tear this near utopia apart.

Earth Interstellar: Proxy WarIndependently Published

The future isn't what they expected. A company of Army Rangers are sent on an interstellar colony ship to secure a foothold on a

dangerous, alien planet through violence of action. Leaving behind a warring Earth flung headfirst into a conflict of mutual assured destruction, the Rangers and the accompanying crew of first colonists are guided on a 40-year journey by an unprecedented artificial intelligence. But when they emerge from the frigid embrace of cryosleep, they awake to a nightmare, finding themselves greeted by the same ruthless enemy that brought about the ruin of Earth. Alone on a dangerous, alien planet and with no hope of rescue or relief, the military colonists are forced to finish the war they thought they'd left behind. And in an unknown galaxy, friends and enemies alike prove to be much more than they seem. Wayward Galaxy is an explosive military science-fiction adventure featuring defective AIs, valorous soldiers, a brilliant scientist, and gritty combat written by Jason Anspach (Associated Press best seller and cocreator of Galaxy's Edge) and J.N. Chaney (USA Today best seller and author of the Renegade series).

This book contains the transcript with images of the exploration video with the above title: Lead in: The effect of the weakening of the Sun is now so dramatic that one hears a lot of talk about another "Grand Solar Minimum" happening in the near future, such as the Maunder (grand) Minimum that gave us the Little Ice Age. The concept of a coming "Grand Solar Minimum" is a deception however, because the next Grand Solar Minimum will be the full Ice Age. The underlying support for the Sun no longer exists for a reversal back to 'normal' to be possible from any Grand Minimum. The rapid collapse of the interstellar plasma density for the Solar System, has diminished the background for the powering of the Sun past the point for a possible reversal back to normal. We see the collapse of the solar system by the weakening Sun, evident in the diminishing sunspot numbers, and solar-wind pressure, and in ever-greater volumes of cosmic-ray flux (measured by NASA's spacecraft Ulysses), and larger coronal holes. The end-result of the weakening Sun promises to be worse than nuclear war, and be more certain if humanity fails to meet the Ice Age challenge by building itself a New World that will enable it to live securely and prosper in an otherwise largely uninhabitable world. If this challenge is taken up, a higher-level paradigm will develop for humanity by which today's terror, conflicts, wars, even nuclear war, and all the grand economic looting, imperial control, and depopulation policies will fall by the wayside as mistakes unworthy of humanity. The widely expected next Grand Solar Minimum will not end with a recovery, but become the next Ice Age glaciation stage. At this point the Earth becomes a largely uninhabitable 'Ice Planet'. Agriculture ends at this point, and humanity ends with it for the lack of food, unless a new world is created with protected agricultures by technological infrastructures that the Ice Age cannot touch. Here a great crisis is in the making, because the required infrastructures are not being built. A crisis looms before us, because once the Ice Age glaciation starts, with the collapse of the primer fields for the Sun, it cannot reverse itself without a major build-up in the interstellar plasma stream that is needed for the primer fields to form anew. This build-up will take a long time to develop under the current galactic condition. This means that the recovery of the Sun will take about 90,000 years to happen, long past the anticipated "Grand Solar Minimum" that will become the Ice Age spanning the next 90,000 years. This book explores numerous historic solar activity measurements. One takes us back in time 150,000 years. This long climate history is preserved in proxy form by Beryllium-10 production ratios that are measurable in the ice of Antarctica. Beryllium-10 is a radio-isotope that is exclusively produced by cosmic-ray flux affecting the Earth atmosphere. It has a half-life of 1.39 million years and is measurable

contained in historic ice. The historic Beryllium-10 measurements drawn from Antarctica reveal some amazing details about the last Ice Age and how it started, and how it may start anew in our time, to which we are already in the boundary zone, where we encounter increasing crop losses, nearly worldwide, that threaten our food supply in the near future.

Extraterrestrial Altruism examines a basic assumption of the Search for Extraterrestrial Intelligence (SETI): that extraterrestrials will be transmitting messages to us for our benefit. This question of whether extraterrestrials will be altruistic has become increasingly important in recent years as SETI scientists have begun contemplating transmissions from Earth to make contact. Technological civilizations that transmit signals for the benefit of others, but with no immediate gain for themselves, certainly seem to be altruistic. But does this make biological sense? Should we expect altruism to evolve throughout the cosmos, or is this only wishful thinking? Is it dangerous to send messages to other worlds, as Stephen Hawking has suggested, or might humankind benefit from an exchange with intelligence elsewhere in the galaxy? Would extraterrestrial societies be based on different ethical principles, or would we see commonalities with Earthly notions of morality? Extraterrestrial Altruism explores these and related questions about the motivations of civilizations beyond Earth, providing new insights that are critical for SETI. Chapters are authored by leading scholars from diverse disciplines—anthropology, astronomy, biology, chemistry, computer science, cosmology, engineering, history of science, law, philosophy, psychology, public policy, and sociology. The book is carefully edited by Douglas Vakoch, Director of Interstellar Message Composition at the SETI Institute and professor of clinical psychology at the California Institute of Integral Studies. The Foreword is by Frank Drake. This interdisciplinary book will benefit everybody trying to understand whether evolution and ethics are unique to Earth, or whether they are built into the fabric of the universe.

From September 2007 to June 2008 the Space Studies Board conducted an international public seminar series, with each monthly talk highlighting a different topic in space and Earth science. The principal lectures from the series are compiled in Forging the Future of Space Science. The topics of these events covered the full spectrum of space and Earth science research, from global climate change, to the cosmic origins of life, to the exploration of the Moon and Mars, to the scientific research required to support human spaceflight. The prevailing messages throughout the seminar series as demonstrated by the lectures in this book are how much we have accomplished over the past 50 years, how profound are our discoveries, how much contributions from the space program affect our daily lives, and yet how much remains to be done. The age of discovery in space and Earth science is just beginning. Opportunities abound that will forever alter our destiny.

Soon to be a Netflix Original Series! “War of the Worlds for the 21st century.” – Wall Street Journal The Three-Body Problem is the first chance for English-speaking readers to experience the Hugo Award-winning phenomenon from China's most beloved science fiction author, Liu Cixin. Set against the backdrop of China's Cultural Revolution, a secret military project sends signals into space to establish contact with aliens. An alien civilization on the brink of destruction captures the signal and plans to invade Earth. Meanwhile, on Earth, different camps start forming, planning to either welcome the superior beings and help them take over a world seen as corrupt, or to fight against the invasion. The result is a science fiction masterpiece of enormous scope and vision.

I've got my eye on you... With the help of his new supporter Lilliluka, novice adventurer Bell Cranell is making progress deeper into the Dungeon. With new equipment and new allies, he thinks things are finally starting to go his way...but he's dead wrong! Bell's in a panic, Lilliluka's being cryptic, and Hestia's drunk! The trouble never seems to end in this third volume of the hit comedy-fantasy series!

When the XSS Cousteau makes First Contact with the Rheas, a pre-space flight alien race, it creates an opportunity for humanity for an economic windfall for Earth. After 300 years of paying tribute to their benefactor, the Vrene, they can use the money. Humanity will make the Rheas a vassal race to humanity and pay tribute in exchange for protection from other advanced civilizations. Only the Chzek already have a claim on the Rheas, who they want to enslave to serve their empire. And, unknown to the humans, the Chzek are long-time enemies of the Vrene. With little choice, humanity and a Chzek vassal race are made proxies of their more advanced benefactors and fight Earth's first interstellar war. Questions arise as Commander Kree and others realize the Vrene were preparing Earth to fight this war with their enemy for hundreds of years. Did their "benefactor" set them up to fight a war they do not want and cannot afford? Or, did the Vrene do them a favor preparing them for a war they were already destined to fight as the Chzek expand their empire? Earth Interstellar is fast paced story of future interstellar conflict with credible representation of war in space.

Are we alone? asks the writeup on the back cover of the dust jacket. The contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come. The Neanderthals had brow ridges to keep the sun out of their eyes, but why don't we? When a leading scientist walked into a wall and broke his nose, he decided to find out. In this fascinating and wide-ranging book, Dr. Ellis Silver discusses the evidence that proves we evolved on a world distinctly different from the one we live on today.

“Reading Manifold: Time is like sending your mind to the gym for a brisk workout. If you don’t feel both exhausted and exhilarated when you’re done, you haven’t been working hard enough.”—The New York Times Book Review The year is 2010. More than a century of ecological damage, industrial and technological expansion, and unchecked population growth has left the Earth on the brink of devastation. As the world’s governments turn inward, one man dares to envision a bolder, brighter future. That man, Reid

Malenfant, has a very different solution to the problems plaguing the planet: the exploration and colonization of space. Now Malenfant gambles the very existence of time on a single desperate throw of the dice. Battling national sabotage and international outcry, as apocalyptic riots sweep the globe, he builds a spacecraft and launches it into deep space. The odds are a trillion to one against him. Or are they? "A staggering novel! If you ever thought you understood time, you'll be quickly disillusioned when you read *Manifold: Time*."—Sir Arthur C. Clarke

THE NOVEL DEEMED TOO DANGEROUS TO BE PUBLISHED IN AMERICA--IS FINALLY PUBLISHED IN AMERICA! In this thought-provoking work set in the near future and first published in 2007, Spinrad (*Raising Hell*) traces the course of his protagonist's life from naive youth to veteran soldier... At its core, the book is about a young man struggling with his faith and the politics that are rightly or wrongly attached to that faith, and his choices feel plausible even to readers who would make very different ones. -- Publishers Weekly, Starred Review *OSAMA THE GUN*, set in a not-so-far future when the "Sons of Osama" have established a powerful Islamic Caliphate with Pakistani nuclear weapons and Arabian oil money, is the story of one of those "sons" of the martyr, a naive and sincere young man who becomes a Caliphate secret agent to escape its closed confines and see the world -- and finds himself becoming the reluctant hero of the title. *Osama the Gun* becomes a terrorist leader on a small scale by happenstance, a mercenary used by Islamic forces fighting an American proxy invasion in the oil lands of Nigeria, an iconic figure in the manner of "El Che." All the while he charms the reader as a likable, sincere, idealistic, and sympathetic human doing very unsympathetic things to the interests of the United States of America. "I wanted the reader to hate the sin, but love the sinner, because I felt it had to be done, and since no one else seemed to be willing to do it, I had to try to do it myself, come what may. Because Islam was being confused with its radical Middle Eastern jihadis, and Arabs in general with terrorists, and it seemed to me that the alien jihadist consciousness had to be experienced from within and empathetically understood. Which was why *OSAMA THE GUN* had to be written, and why, as one foaming at the mouth rejection letter predicted, no American publisher would touch this book." -- Norman Spinrad

The Prince of Darkness is coming. Comet Anduru skimmed the clouds of Saturn. Rather than being drawn into the gas giant, it skipped back out into space. With the comet heading for Jupiter, speculation is mounting it's an alien spacecraft making its way to Earth. Lieutenant Colonel Nolan Landis and Dr. Kath McKenzie are caught between an angry public and an anxious President as they grapple with the scientific, social, and political implications of First Contact. *FIRST CONTACT* is a series of stand-alone novels that explore the concept of humanity's first interaction with extraterrestrial life. Like *BLACK MIRROR* or *THE TWILIGHT ZONE*, the series is based on a common theme rather than common characters, allowing these books to be read in any order. Technically, they're all first as they all deal with how we might initially respond to contact with aliens, exploring the social, political, religious, and scientific aspects of First Contact.

Adrian Tchaikovsky's award-winning novel *Children of Time*, is the epic story of humanity's battle for survival on a terraformed planet. Who will inherit this new Earth? The last remnants of the human race left a dying Earth, desperate to find a new home

among the stars. Following in the footsteps of their ancestors, they discover the greatest treasure of the past age - a world terraformed and prepared for human life. But all is not right in this new Eden. In the long years since the planet was abandoned, the work of its architects has borne disastrous fruit. The planet is not waiting for them, pristine and unoccupied. New masters have turned it from a refuge into mankind's worst nightmare. Now two civilizations are on a collision course, both testing the boundaries of what they will do to survive. As the fate of humanity hangs in the balance, who are the true heirs of this new Earth?

#1 NEW YORK TIMES BESTSELLER * "The Uninhabitable Earth hits you like a comet, with an overflow of insanely lyrical prose about our pending Armageddon."--Andrew Solomon, author of *The Noonday Demon* With a new afterword It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible--food shortages, refugee emergencies, climate wars and economic devastation. An "epoch-defining book" (*The Guardian*) and "this generation's *Silent Spring*" (*The Washington Post*), *The Uninhabitable Earth* is both a travelogue of the near future and a meditation on how that future will look to those living through it--the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. *The Uninhabitable Earth* is also an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation--today's. Praise for *The Uninhabitable Earth* "The Uninhabitable Earth is the most terrifying book I have ever read. Its subject is climate change, and its method is scientific, but its mode is Old Testament. The book is a meticulously documented, white-knuckled tour through the cascading catastrophes that will soon engulf our warming planet."--Farhad Manjoo, *The New York Times* "Riveting. . . . Some readers will find Mr. Wallace-Wells's outline of possible futures alarmist. He is indeed alarmed. You should be, too."--*The Economist* "Potent and evocative. . . . Wallace-Wells has resolved to offer something other than the standard narrative of climate change. . . . He avoids the 'eerily banal language of climatology' in favor of lush, rolling prose."--Jennifer Szalai, *The New York Times* "The book has potential to be this generation's *Silent Spring*."--*The Washington Post* "The Uninhabitable Earth, which has become a best seller, taps into the underlying emotion of the day: fear. . . . I encourage people to read this book."--Alan Weisman, *The New York Review of Books*

REVOLT ON A FRONTIER PLANET The corrupt Earth government is sending an army to Greenwood to remove the pioneers who discovered and settled the planet: the potential profits are too great to leave the world to scraggly ne'er-do-wells! Though the rugged individualists of Greenwood may be fractious and disinclined to agree on most things, the greedy politicians of Earth will learn a harsh lesson if they think the settlers won't join together to save their livelihoods and homes! Under Yerby Bannock, who never walked away from a drink or a fight, the Greenwood patriots will face thugs in the night, lawyers in a distant court, traitors in their own ranks¾ And, if they have to, a fortress built to shrug off the assault of a battlefleet! To preserve humanity's survival and freedom in a hostile galaxy, Annette Bond tied her world to the A!Tol Imperium. With enough

time, she can build Earth a place in the galaxy. But as Bond's many enemies gather their forces, the clouds of war threaten not only the recovering Terra but the entire Imperium.

This book develops a credible scenario for interstellar exploration and colonization. In so doing, it examines: • the present situation and prospects for interstellar exploration technologies; • where to go: the search for habitable planets; • the motivations for space travel and colonization; • the financial mechanisms required to fund such enterprises. The final section of the book analyzes the uncertainties surrounding the presented scenario. The purpose of building a scenario is not only to pinpoint future events but also to highlight the uncertainties that may propel the future in different directions. Interstellar travel and colonization requires a civilization in which human beings see themselves as inhabitants of a single planet and in which global governance of these processes is conducted on a cooperative basis. The key question is, then, whether our present civilization is ready for such an endeavor, reflecting the fact that the critical uncertainties are political and cultural in nature. It is written in such a way as to allow the non-professional reader to become part of the debate on the future of space programs.

In the winter of 2026 C.E., the execution of Operation Kaminari continues in defiance of an enemy that is willing to murder billions in order to maintain control of the war-torn survivors. Allied Forces on the surface of Earth are fighting against hostile paramilitaries and heavily-armed state-sponsored proxy forces. Militias, rogue ex-military operators, and motley groups of specialized global resistance fighters are working in direct collaboration with DSEF to seek, surveil, study, sabotage, and destroy the enemy's war-fighting capability. Together they are all helping to evacuate humanity from the apocalyptic battle fields of a global NBC war that has devastated Earth's biosphere and left the humans struggling for survival in a toxic, irradiated nightmare. Technical Sergeant Kahmay O'Conaill, Staff Sergeant A.J. Conway, and the DSEF crews of seven interstellar supercruisers are tasked with relocating the sick, wounded, and innocent to a dangerously untested off-world sanctuary. The challenges of the evacuation, while simultaneously equipping resistance elements on the surface of Earth with advanced technology and continually modified

reinforcements pushes Kahmay, A.J., and their shipmates on the X-Tensai to expand their capacity for innovation. Autonomous non-human commandos capable of traveling through Earth's scorched killing fields are programmed to infiltrate enemy territories and neutralize enemy fighters. The commandos work tirelessly to liberate and protect civilians who are trapped behind enemy lines. Hope of rescue lives on for those who are still entombed in subterranean shelters, and surrounded above on the Earth's surface by the deadly effects of nuclear winter, contaminated water supplies, and biological hot zones. The flagship X-Tensai, along with one of the fleet's two multi-role tactical escorts, the E.S.S. Hell Cat, rendezvous with the interplanetary freighter E.S.S. Terrawatt and continue on a course for Mars. The E.S.S. Dark Star, the E.S.S. Scorpius, and the E.S.S. Jackrabbit remain close to Earth as a vital part of the Allied strategy to prevent Earth from falling into an abyss of unrelenting human suffering and mass murder. Headquarters DSEF has deployed the special operations deep space scout E.S.S. Blackfoot to the EDO system. Commander Aranck Allaire will lead the Blackfoot team to their ultimate objective 4.24 light years away. His orders are to document and carry out a series of top-secret operational objectives across two separate star systems. The E.S.S. Terrawatt, cruising through the Earth-Mars Interplanetary Passage (EMIP), has launched an unprecedented macro-scale autonomous robotic construction swarm months in advance of the arrival of the main EMIP contingent to Martian space. The swarm has found a shocking anomaly. Specially-trained human scouts from DSEF's Devil Dog units are sent to the Martian surface with quadrupedal tac-units from the Hell Cat and have arrived at the equatorial cave network near the edge of the Martian dichotomy boundary. "The Labyrinth" cave network is rapidly being transformed into the first off-world outpost for humankind on Mars. The fleet's Martian contingent is working feverishly to deliver the first group of thousands of humans down to the Martian surface and re-deploy back to Earth to ensure the evacuation route to HEIWA remains clear for those still trapped and fleeing for their lives to reach the Ring of Fire. The returning Martian Contingent will take on more passengers and provide strength in numbers to the courageous fighting ships of the Earth contingent. Together they provide the core strategic infrastructure and tactical collaboration for operations being conducted throughout Earth's still sporadically-erupting battle zones. Commander Gertrude Garima, DSEF's highest ranking off-world officer and skipper of the one-of-kind special purpose interplanetary freighter E.S.S. Terrawatt, sends an unexpected surprise back to earth from Mars.

A strange alien species forces us to question our definition of civilization in this biting satire from the Grand Master of Science Fiction. What would intelligent life?forms on another planet look like? Would they walk upright? Would they wear clothes? Or would they be hulking creatures on six legs that wallow in their own excrement? Upon first contact with the Utod— intelligent, pacifist beings who feel no pain—mankind instantly views these aliens as animals because of their unhygienic customs. This leads to the slaughter, capture, and dissection of the Utod. But when one explorer recognizes the intelligence behind their habits, he must reevaluate what it actually means to be “intelligent.”

It begins in the realm of the Real, where matter still matters. It begins with a murder. And it will not end until the Culture has gone to war with death itself. Lededje Y'breq is one of the Intagliated, her marked body bearing witness to a family shame, her life belonging to a man whose lust for power is without limit. Prepared to risk everything for her freedom, her release - when it comes - is at a price, and to put things right she will need the help of the Culture. Benevolent, enlightened and almost infinitely resourceful though it may be, the Culture can only do so much for any individual. With the assistance of one of its most powerful - and arguably deranged - warships, Lededje finds herself heading into a combat zone not even sure which side the Culture is really on. A war - brutal, far-reaching - is already raging within the digital realms that store the souls of the dead, and it's about to erupt into reality. It started in the realm of the Real and that is where it will end. It will touch countless lives and affect entire civilizations, but at the center of it all is a young woman whose need for revenge masks another motive altogether.

When Peter finds himself on a strange planet, drafted into a war by alien abductors, his only goal is to be one of the few to survive the war and return home to Earth. Peter is one of thousands who get abducted every year, as payment to the aliens. The aliens have given humans portal travel, healing serums, and other advanced alien technology. The quality of life has improved, but everything has a price. Along with a group of strangers Peter is trained for war by going up against literal monsters. The troll-like aliens won't give them modern weapons.

Humans have to battle monsters with swords and shields, and that is just to get out of boot camp. His only chance to survive is to use the alien device he is given. The device can increase his strength and speed to superhuman levels. It can even grant him powers that seem like magic. Complicating things is that the device's interface is written in an ever-changing alien language. He will have to figure out its secrets if he wants to keep himself and his team alive. A Science Fantasy novel with LitRPG elements.

In a 1950 conversation at Los Alamos, four world-class scientists generally agreed, given the size of the Universe, that advanced extraterrestrial civilizations must be present. But one of the four, Enrico Fermi, asked, "If these civilizations do exist, where is everybody?" Given the fact that there are perhaps 400 million stars in our Galaxy alone, and perhaps 400 million galaxies in the Universe, it stands to reason that somewhere out there, in the 14 billion-year-old cosmos, there is or once was a civilization at least as advanced as our own. Webb discusses in detail the 50 most cogent and intriguing solutions to Fermi's famous paradox.

Crossover is the first novel in a series which follows the adventures of Cassandra Kresnov, an artificial person, or android, created by the League, one side of an interstellar war against the more powerful, conservative Federation. Cassandra is an experimental design — more intelligent, more creative, and far more dangerous than any that have preceded her. But with her intellect come questions, and a moral awakening. She deserts the League and heads incognito into the space of her former enemy, the Federation, in search of a new life. Her chosen world is Callay, and its enormous, decadent capital metropolis of Tanusha, where the concerns of the war are literally and figuratively so many light years away. But the war between the League and the Federation was ideological as much as political, with much of that ideological dispute regarding the very existence of artificial sentience and the rules that govern its creation. Cassandra discovers that even in Tanusha, the powerful entities of this bloody conflict have wound their tentacles. Many in the League and the Federation have cause to want her dead, and Cassandra's history, inevitably, catches up with her. Cassandra finds herself at the mercy of a society whose values preclude her own right even to exist. But her presence in Tanusha reveals other fault lines, and when Federal agents attempt to assassinate the Callayan president, she finds herself thrust into the service of her former enemies, using her lethal skills to attempt to protect her former enemies from forces beyond their ability to control. As she struggles for her place and survival in a new world, Cassandra must forge new friendships with old enemies, while attempting to confront the most disturbing and deadly realities of her own existence.

One last mission. One mysterious passenger. One baffling destination. After centuries of travel, an ancient log buoy finally reaches human-controlled space. In the midst of a stalemated interstellar war, the Admiralty has little interest in wasting resources on what

would likely be a fruitless search for the truth, but someone was able to convince them they could afford to send an old, obsolete frigate soon destined for the scrapyard, on this quest. Pulled from her patrol route, Siobhan Dunmoore is ordered to take an envoy aboard Stingray and sail into a poorly charted and virtually unexplored region of the galaxy hidden behind interstellar dust clouds. Along the way, she'll come to the attention of an old enemy, now also relegated to the fringes of the war, turning a voyage of discovery into a race against time and against each other. Though her troubles quickly multiply, Dunmoore has faced worse odds. She's determined to bring Stingray home with its honor intact, and few are brave enough to bet against her, not even their old Shrehari foes. It's obvious that Cletus Graeme--limping, mild-mannered scholarly--doesn't belong on a battling field, but instead at a desk working on his fourth book on battle strategy and tactics. But Bakhalla has more battlefields than libraries, and Graeme sees his small force of Dorsai--soldiers of fortune--as the perfect opportunity to test his theories. But if his theories or his belief in the Dorsai lead him astray, he's a dead man.

Nova Academy for Advanced Superhuman Studies is where I'm going to learn advanced science and engineering. I'm Theo, a super genius, and mad science is my life. There are some surprises in my first year at the Academy. Carly, my new telepath girlfriend, besides being amazingly powerful & awesome, is going to turn my understanding of the world of supers upside down. A supervillain and his henchmen are going to mind control and enslave the science students a part of a diabolical plot and I'm forced to form a super team to mount a rescue. I'll need to upgrade my super armor to have any chance of defeating this power hungry supervillain. A millennium into the future, two advancements have altered the course of human history: the colonization of the Galaxy and the creation of the positronic brain. On the beautiful Outer World planet of Solaria, a handful of human colonists lead a hermit-like existence, their every need attended to by their faithful robot servants. To this strange and provocative planet comes Detective Elijah Baley, sent from the streets of New York with his positronic partner, the robot R. Daneel Olivaw, to solve an incredible murder that has rocked Solaria to its foundations. The victim had been so reclusive that he appeared to his associates only through holographic projection. Yet someone had gotten close enough to bludgeon him to death while robots looked on. Now Baley and Olivaw are faced with two clear impossibilities: Either the Solarian was killed by one of his robots--unthinkable under the laws of Robotics--or he was killed by the woman who loved him so much that she never came into his presence!
