Notable author Katsuhiko Ogata presents the only new book available to discuss, in sufficient detail, the details of MATLAB® materials needed to solve many analysis and design problems associated with control systems. Complements a large number of examples with in-depth explanations, encouraging complete understanding of the MATLAB approach to solving problems. Distills the large volume of MATLAB information available to focus on those materials needed to study analysis and design problems of deterministic, continuous-time control systems. Covers conventional control systems such as transient response, root locus, frequency response analyses and designs; analysis and design problems associated with state space formulation of control systems; and useful MATLAB approaches to solve optimization problems. A useful self-study guide for practicing control engineers.

The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The

Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

This interactive revision guide is the perfect way to achieve structured and easy to access revision notes for Grade 9-1 & A*-G iGCSE Computer Science (new 2020 syllabus). Instead of relying on someone else to write the notes for you, doodle notes draw on years of educational research that show students who write their own notes progress faster, retain more information, and feel less stressed during revision than those that simply read a revision guide. Every topic is supported by knowledge organisers followed by structured A4 pages to help students to write out their revision notes independently, whilst giving the added benefit of ensuring all areas are covered through scaffolded pages. Throughout the notes, useful tips and hints are added to remove the fear of the blank page, without doing the work for them!

Streets Snippets started in 2016 as a project for my son's 8th grade English class in New York City. The original concept was to give the kids a snippet of conversation heard on the streets of the city, and have each student write an original story based upon that snippet. After my son graduated from middle school, the platform wasn't used for several years. It seemed logical to reopen the platform as an extension of the online curriculum development being created as an educational alternative during the COVID pandemic in 2020. When I first approached John Bapst High School in Bangor, Maine about using the Street Snippets platform for their 2020-2021 creative writing class, little did I know the diversity of ideas and formats that would come from this talented group of high schooler's. The first indication was when a request came through to submit a poem instead of a story. Sure, I thought, that would be fun. That was soon followed by requests for publishing songs, cartoon strips and images. The formats went far beyond the basic short story. What you will find in this book are the stories and projects created by the authors at John Bapst. We have kept the stories as written, laying them out as closely as possible to the format created by the authors. The stories in the book are arranged by snippet, with each story beginning with the snippet for that month. As you read through each chapter, you will find a diverse set of ideas, each original, each personal, that takes the snippet as its opening line and then has the story run its course. Each of the stories can be found in its original form on the Street Snippets site. If you like a particular story, you can leave a comment for the author when you visit the site. As the publisher of Street Snippets, I couldn't be prouder of the authors from John Bapst. I look forward to working with next year's students as we continue to encourage and promote the work of the next generation of authors.

Based on the ACM model curriculum guidelines, this text covers the fundamentals of computer science required for first year students embarking on a computing degree.
