Responding to widespread interest within cultural studies and social inquiry, this book addresses the question 'what is a mathematical concept?' using a variety of vanguard theories in the humanities and posthumanities. Tapping historical, philosophical, sociological and psychological perspectives, each chapter explores the question of how mathematics comes to matter. Of interest to scholars across the usual disciplinary divides, this book tracks mathematics as a cultural activity, drawing connections with empirical practice. Unlike other books in this area, it is highly interdisciplinary, devoted to exploring the ontology of mathematics as it plays out in different contexts. This book will appeal to scholars who are interested in particular mathematical habits - creative diagramming, structural mappings, material agency, interdisciplinary coverings - that shed light on both mathematics and other disciplines. Chapters are also relevant to social sciences and humanities scholars, as each offers philosophical insight into mathematics and how we might live mathematically.

Essential Public Affairs for Journalists is an invaluable guide for both journalism students and practising journalists. It takes readers through details of the constitutional framework and the governing institutions of the UK; covers the NHS, the Treasury, industry, utilities, social security and home affairs; explores the role of the UK in the EU and the wider world of international relations; and focuses on local government issues and how these can generate a wealth of stories for the student and professional journalist alike. The fourth edition has been updated with details of the cuts programme;

coverage of the continuing debate over the rise of UKIP and Britain's future in the European Union; and an assessment of the immediate aftermath of the referendum on Scottish independence. There is clearer end of chapter guidance on the key issues students need to consider for the NCTJ essential public affairs course and a tighter focus on the material covered in the revised syllabus. The extensive pedagogy uses new examples to inspire students in the development of their own stories. How to Achieve in Maths is written by the owner of the YouTube Channel Achieve Maths. The purpose of the book is to inspire students of Mathematics with a fresh approach to the subject and to help them in their journey of achieving their full potential in Maths. It is suitable for those preparing for their GCSE Maths or A-level Maths exams, or simply those who want to see Maths education from a new perspective. Many students see maths as inaccessible and difficult, I see it as exciting and enticing. Why are there such differing views of the same thing? Why do some people dread numbers and anything maths related, while others thrive on the challenges of the subject? In this book, I aim to address these inconsistencies and look at how to see maths in a way that will allow you to enjoy your studies and work towards success with purpose and determination. The book contains six chapters, the first four chapters outline how to see maths in a positive light and give action steps to help you to achieve success. The penultimate chapter is a selection of carefully crafted, original exam style questions to allow the reader to put into practice what they have learnt. The final chapter has detailed worked solutions to the questions and talks the reader through the best way to approach and answer them.

The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.
