Despite its outwardly static and traditional appearance, the Haredi (ultra-Orthodox) world is engaged in a constant cultural dialogue with modernity. This dialogue is exceptionally visible in the realm of language as shown in this study that examines the language and culture of four ultra-Orthodox groups found in Israel: the Ashkenazi (European) Mitnagdim-Lithuanians, and the Oriental Sefaradi Haredim. After the presentation of the historical background of the four sects, the author analyzes the public and private domains, focusing on language as used in many different forms and situations, and on the management of language. He furthermore compares the language policies of British, American, and French Haredim belonging to the Habad, Gur, Mitnagdic and Sefaradi sects to those in Israel and finds many similarities between the groups. The book concludes with the proposal of an interdisciplinary model, based on the Haredi case study, which can be used by language planners worldwide to understand the issues of language maintenance and loss among ethnic and ethno-religious minorities.

4th-7th eds. contain a special chapter on The role and function of the thesaurus in education, by Frederick Goodman.

Rather like the nerves in human body, communication forms the sinew and tendon of any social body. The quality of everyday life is not only affected by the way we design our work and institutions, but also (perhaps more importantly) by the way we interact and communicate with each other. This booklet attempts to help its readers to become more effective oral communicators in various scenarios. Every chapter in this booklet is largely divided into three parts: (1) reflective and motivational quotations, (2) guidelines for communication in a certain context, and (3) versatile phrases for that context. The quotations are intended to emotionally and philosophically motivate the readers to strive for better communication. The guidelines are intended to cognitively guide the readers in their communication practices. And the versatile phrases are intended to logistically supply for the readers' communication practices.

As top-down educational reform policies at local and national levels increasingly isolate teachers from their own professional and instructional agency, and stultify children's passion for learning, new techniques are needed for understanding and transforming educational practices. Narrative Inquiry in Early Childhood and Elementary School: Learning to Teach, Teaching Well facilitates meaningful change in early years education by providing early childhood and elementary school teachers with methods to incorporate narrative into their instruction and inquiry. This book offers practical strategies for incorporating narrative tools and structures into the classroom, and encouraging effective conceptual, pedagogical, and personal avenues for engaged teaching and learning across languages and cultures. The book's chapters promote a lively discussion of central tenets of narrative inquiry and illustrative examples of teachers at work with narrative and inquiry for improving their practice and children's learning.

Diversified schools, in which students of various racial, ethnic, and socioeconomic characteristics are balanced, have a positive contextual effect on achievement for all groups as compared with schools with homogeneous student bodies that tend to help affluent, white students and harm poor students and students of color. Most studies of school reform offer single-variable solutions such as choice, autonomy, or standards. This nationwide study shows how a better and more permanent reform outcome is achieved when choice, diversity, and school improvement are introduced simultaneously.

Educators often overlook the positive impact of changing the environment of the school itself when considering how to improve the quality of education. First published in 1994, School Design shows how to create more effective schools through a design process that involves teachers, students, parents, administrators, and architects. It reveals how to create school environments that develop the whole child, instil enthusiasm for learning, and encourage positive social relationships. Readers discover how to integrate design research, design participation, and design development to optimize school settings. Using a number of case studies, detailed practical methods show how to: Link behavioural objectives to spatial needs Achieve spatial efficacy without compromising education Match children's developmental needs to facility requirements Promote greater variety in physical facilities to accommodate various teaching and learning styles Gain

more valuable feedback from teachers, parents, students, and local citizens on building performance. In response to tight school budgets, Henry Sanoff discusses how relatively minor design modifications can have a major positive effect on school performance. This path-breaking volume will provide architects, teachers, and school administrators with a wide array of insights into creating spaces that promote better learning.

Elementary school physical educators looking for expert guidance in designing lessons that are aligned with SHAPE America's National Standards and Grade-Level Outcomes need look no further. Lesson Planning for Elementary Physical Education works in tandem with SHAPE America's National Standards & Grade-Level Outcomes for K-12 Physical Education and The Essentials of Teaching Physical Education to provide the knowledge base and practical strategies for creating high-quality elementary physical education curricula. Key Benefits Written by master teachers and edited by the team who oversaw the creation of the National Standards and Grade-Level Outcomes, Lesson Planning for Elementary Physical Education is endorsed by SHAPE America. The text has the following features: • 65 lessons that foster the achievement of physical literacy for children in grades K-5 • Numerous learning experiences that engage students in the psychomotor, cognitive, and affective domains • Curriculum design based on student growth • Sequential lessons leading to mature patterns of motor performance • An introductory chapter on the key points for the grade span, putting the lessons in context and providing a road map for planning curriculum, units, and lessons • Instruction on creating high-quality lessons that reach the desired objectives Flexible Lessons Teachers can use the lessons as presented or modify them to meet local needs. The lessons provide a structure for teachers to follow in developing their own learning experiences and curricula. Each of the chapters in this unique book was written expressly for each major stakeholder group in your school, tailored to their varied needs and experiences. Each chapter contains a set of inter-related practical activities so that each group focuses on the same goals and supports the others. Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

Children in today's world are inundated with information about who to be, what to do and how to live. But what if there was a way to teach children how to manage priorities, focus on goals and be a positive influence on the world around them? The Leader in Me is that programme. It's based on a hugely successful initiative carried out at the A.B. Combs Elementary School in North Carolina. To hear the parents of A. B Combs talk about the school is to be amazed. In 1999, the school debuted a programme that taught The 7 Habits of Highly Effective People to a pilot group of students. The parents reported an incredible change in their children, who blossomed under the programme. By the end of the following year the average end-of-grade scores had leapt from 84 to 94. This book will launch the message onto a much larger platform. Stephen R. Covey takes the 7 Habits, that have already changed the lives of millions of people, and shows how children can use them as they develop. Those habits -- be proactive, begin with the end in mind, put first things first, think win-win, seek to understand and then to be understood, synergize, and sharpen the saw -- are critical skills to learn at a young age and bring incredible results, proving that it's never too early to teach someone how to live well.
