1876-1891 include reports on the internal commerce of the United States, referred to in letters of transmittal as "the volume on commerce and navigation."

Accompanied by annual issue in 1944 and by quarterly cumulative issues beginning in 1945.

Consumer Sourcebook provides a comprehensive digest of accessible resources and advisory information for the American consumer. This new edition identifies and describes some 23,000 programs and services available to the general public at little or no cost. These services are provided by federal, state, county, and local governments and their agencies as well as by organizations and associations. Consumer affairs and customer services departments for corporations are also listed as well as related publications, multimedia products, general tips and recommendations for consumers. The master index is arranged alphabetically by name and by subject term.

In 1629 the Dutch ship Batavia ran aground on a small group of islands off the coast of Western Australia after being deliberately steered off course by a group of vicious mutineers. Hundreds died in the weeks that followed as the group claiming a new world order massacred anyone opposing their reign of terror, or were superfluous to their needs. Eventually the insurgents had justice served to them in the form of torture, and death. Only two were spared and abandoned on the mainland, never to be heard from again. Almost 400 years post these true events, the accidental unearthing of eerily mutated human remains in the Western Australian countryside leads to the discovery of a medallion belonging to a crew member of the ill-fated Batavia's maiden journey. A Maritime Archaeologist searching for answers encounters a young human guinea-pig with abnormal abilities on the run from her captors, and begins to discover the dark secrets of the disturbed local immortal, twisted, shocking, and blood-soaked history.

When a shy librarian in Santa Fe sees Robert Oppenheimer, Enrico Fermi, and Leo Szilard, she risks her career and relationships to follow them, building a cult following comprised of hippies, bikers, anthropologists, and survivors of the atom bomb to mount a massive march on Washington. Reader's Guide available. Reprint. 35,000 first printing.

To exploit the full potential of this diverse compound class for the development of novel active substances, this handbook presents the latest knowledge on carbohydrate chemistry and biochemistry. While it is unique in covering the entire field, particular emphasis is placed on carbohydrates with pharmaceutical potential. Topics include the following: > Chemical Synthesis of Carbohydrates > Carbohydrate Biosynthesis and Metabolism > Carbohydrate Analysis > Cellular Functions of Carbohydrates > Development of Carbohydrate-based Drugs A premier resource for carbohydrate chemists and drug developers, this comprehensive two-volume work contains contributions by more than 50 of the world's leading carbohydrate chemists.

Science of Synthesis provides a critical review of the synthetic methodology developed from the early 1800s to date for the entire field of organic and organometallic chemistry. As the only resource providing full-text descriptions of organic transformations and synthetic methods as well as experimental procedures, Science of Synthesis is therefore a unique chemical information tool. Over 1000 world-renowned experts have chosen the most important molecular transformations for a class of organic compounds and elaborated on their scope and limitations. The systematic, logical and consistent organization of the synthetic methods for each

functional group enables users to quickly find out which methods are useful for a particular synthesis and which are not. Effective and practical experimental procedures can be implemented quickly and easily in the lab.// The content of this e-book was originally published in June 2005.

"Report of the Dominion fishery commission on the fisheries of the province of Ontario, 1893", issued as an addendum to vol. 26, no. 7.

February issue includes Appendix entitled Directory of United States Government periodicals and subscription publications; September issue includes List of depository libraries; June and December issues include semiannual index

Intrigued as much by its complex nature as by its outsider status in traditional organic chemistry, the editors of The Organic Chemistry of Sugars compile a groundbreaking resource in carbohydrate chemistry that illustrates the ease at which sugars can be manipulated in a variety of organic reactions. Each chapter contains numerous examples demonst
