Italy in the Middle Ages was unique among the countries of Europe in recreating, in a changed environment, the urban civilization of antiquity - the society, culture, and political formations of city-states. This book examines the origins and nature of this phenomenon from the fall of Rome to the eve of its consummation, the Italian Renaissance. The explanation is sought in Italy's singular `double existence' between two contrasted worlds - ancient and medieval. The ancient was characterised by the total predominance of the landed aristocracy in economy and society, enforced through a peculiar system of city states embracing town and country. The new medieval influences were marked by the separation of town, country and aristocracy, by the identification of towns with trade and a mercantile bourgeoisie, and by commercial and proto-industrial revolution. Italy shared in both worlds. It remained a land of cities and of an urbanized ruling class (except in the Norman South) and re-established territorial city states; but the staes were very different from those of antiquity, the city leaders in the commercial revolution, and Italy itself seen as a nation of shopkeepers, birthplace of capitalism. In this fascinating and ground-breaking study, Philip Jones traces in detail the tension and interaction between the two traditions, civic and patrician, mercantile and bourgeois, through all phases of Italian life to their culmination in two rival regimes of communes and despots.

Most people know that there are 70 million Baby Boomers in America today....but what is less known is that there are approximately 100 million people in America between the ages of 16 and 30. This generation has just entered, or will soon be entering the work force. And they

have no idea how to invest, save, or handle their money. Young people today come out of school having had little or no formal education on the basics of money management. Many have large debts from student loans looming over their heads. And many feel confused and powerless when their pricey educations don't translate into high paying jobs. They feel that their \$30,000-\$40,000 salary is too meager to bother with investing, and they constantly fear that there will be "too much month left at the end of their money." Douglas R. Andrew has shown the parents of this generation a different pathway to financial freedom. Now Doug and his sons, Emron and Aaron - both of whom are in their mid-20s - show the under-30 crowd how they can break from traditional 401k investment plans and instead can find a better way by investing in real estate, budgeting effectively, avoiding unnecessary taxes and using life insurance to create tax-free income. With the principles outlined in *Millionaire by Thirty*, recent graduates will be earning enough interest on their savings to meet their basic living expenses by the time they're 30. And by the time they're 35, their investments will be earning more money than they are, guaranteeing them a happy, wealthy future.

This collection of contributions from a diverse group of prominent international scientists and policy makers brings together their in-depth analyses and innovative ideas about how to resolve the 'energy for development' predicament. It includes studies quantifying the role of energy in socioeconomic development, analysis of the interplay between supranational and national institutions in policy implementation, the energy implications of demographic trends such as urbanisation, and exploration of supply-side issues such as the potential role of nuclear energy and 'cleaning' fossil fuel

energy generation through carbon capture.

First Published in 2007. Routledge is an imprint of Taylor & Francis, an informa company.

This publication contains 189 individual country profiles, each comprising 30 indicators mostly related to the four main dimensions of commodity dependence, namely: merchandise and commodity export dependence - Commodity import dependence - key socioeconomic indicators - other structural indicators. As commodity dependence tends to negatively affect poverty alleviation and food security, a set of indicators is included to help monitor trends in these areas. For each individual country, 1995 is used as the historical reference year.

On a journey that would take him deep into the wilderness, the author sets out in the footsteps of St Anthony, the founder of monasticism. In a hermit's cell in the heart of the Egyptian Sinai Desert, he lived alone. This book contains letters which are an honest exploration of the ways in which we are formed by others.

Energy production and storage are central problems for our time. In principle, abundant energy is available from the sun to run the earth in a sustainable way. Solar energy can be directly harnessed by agricultural and photovoltaic means, but the sheer scale of the energy demand poses severe challenges, for example any major competition between biomass production and food production would simply transfer scarcity from energy to food. Indirect use of solar energy in the form of wind looks also promising, especially for those regions not blessed with abundant sunlight. Other modes such as tidal and wave energy may well become important niche players. Inorganic chemistry plays a decisive role in the development of new energy technologies and this Volume covers some promising modes of alternative energy production and storage that minimize the atmospheric burden of fossil-derived carbon monoxide. No one production or storage mode is likely to

dominate, at least at first, and numerous possibilities need to be explored to compare their technical feasibility and economics. This provides the context for a broad exploration of novel ideas that we are likely to see in future years as the field expands. This Volume covers a wide range of topics, such as: - Water splitting, only water is a sufficiently cheap and abundant electron source for global exploitation; - Energy conversion by photosynthesis; - Molecular catalysts for water splitting; - Thermochemical water splitting; - Photocatalytic hydrogen production; - Artificial photosynthesis, progress of the Swedish Consortium; - Hydrogen economy; - Reduction of carbon dioxide to useful fuels; - Conversion of methane to methanol; - Dye sensitized solar cells; - Photoinitiated electron transfer in fuel cells; - Proton exchange membranes for fuel cells; - Intermediate temperature solid oxide fuel cells; - Direct Ethanol fuel cells; - Molecular catalysis for fuel cells; - Enzymes and microbes in fuel cells; - Li-Ion batteries; - Magic Angle Spinning NMR studies of battery materials; Supercapacitors and electrode materials. About EIC Books The Encyclopedia of Inorganic Chemistry (EIC) has proved to be one of the defining standards in inorganic chemistry, and most chemistry libraries around the world have access either to the first or second print edition, or to the online version. Many readers, however, prefer to have more concise thematic volumes, targeted to their specific area of interest. This feedback from EIC readers has encouraged the Editors to plan a series of EIC Books, focusing on topics of current interest. They will appear on a regular basis, and will feature leading scholars in their fields. Like the Encyclopedia, EIC Books aim to provide both the starting research student and the confirmed research worker with a critical distillation of the leading concepts in inorganic and bioinorganic chemistry, and provide a structured entry into the fields covered. This volume is also available as part of Encyclopedia of Inorganic Chemistry, 5 Volume Set. This set combines all volumes published as EIC Books from 2007 to 2010, representing areas of key developments in the field of inorganic chemistry published in the Encyclopedia of Inorganic Chemistry.

Displaying the distinctive combination of narration and philosophy for which he is well known, this new book by Peter Sloterdijk develops a radically new account of globalization at the beginning of the twenty-first century. The author takes seriously the historical and philosophical consequences of the notion of the earth as a globe, arriving at the thesis that what is praised or decried as globalization is actually the end phase in a process that began with the first circumnavigation of the earth and that one can already discern elements of a new era beyond globalization. In the end phase of globalization, the world system completed its development and, as a capitalist system, came to determine all conditions of life. Sloterdijk takes the Crystal Palace in London, the site of the first world exhibition in 1851, as the most expressive metaphor for this situation. The palace demonstrates the inevitable exclusivity of globalization as the construction of a comfort structure that is, the establishment and expansion of a world interior whose boundaries are invisible, yet virtually insurmountable from without, and which is inhabited by one and a half billion winners of globalization; three times this number are left standing outside the door.

This elegant essay exemplifies Blumenberg's ideas about the ability of the historical study of metaphor to illuminate essential aspects of being human. Originally published in the same year as his monumental *Work on Myth*, *Shipwreck with Spectator* traces the evolution of the complex of metaphors related to the sea, to shipwreck, and to the role of the spectator in human culture from ancient Greece to modern times. The sea is one of humanity's oldest metaphors for life, and a sea journey, Blumenberg observes, has often stood for our journey

through life. We all know the role that shipwrecks can play in this journey, and at some level we have all played witness to others' wrecks, standing in safety and knowing that there is nothing we can do to help, yet fixed comfortably or uncomfortably in our ambiguous role as spectator. Through Blumenberg's seemingly inexhaustible knowledge of letters, from ancient texts through nineteenth-century reminiscences and modern speeches, we see layer upon layer revealed in the meaning humans have given to these metaphors; and in this way we begin to understand what metaphors can do that more straightforward modes of expression cannot. This edition of *Shipwreck with Spectator* also includes "Prospect for a Theory of Nonconceptuality," an essay that recounts the evolution of Blumenberg's ideas about metaphorology in the years following his early manifesto "Paradigms for a Metaphorology."
