Geography is useful, indeed necessary, to survival. Everyone must know where to find food, water, and a place of rest, and, in the modern world, all must make an effort to make the Earth—our home—habitable. But much present-day geography lacks drama, with its maps and statistics, descriptions and analysis, but no acts of chivalry, no sense of quest. Not long ago, however, geography was romantic. Heroic explorers ventured to forbidding environments—oceans, mountains, forests, caves, deserts, polar ice caps—to test their power of endurance for reasons they couldn't fully articulate. Why climb Everest? "Because it is there." Yi-Fu Tuan has established a global reputation for deepening the field of geography by examining its moral, universal, philosophical, and poetic potentials and implications. In his twenty-second book, *Romantic Geography*, he continues to engage the wide-ranging ideas that have made him one of the most influential geographers of our time. In this elegant meditation, he considers the human tendency—stronger in some cultures than in others—to veer away from the middle ground of common sense to embrace the polarized values of light and darkness, high and low, chaos and form, mind and body. In so doing, venturesome humans can find salvation in geographies that cater not so much to survival needs (or even to good, comfortable living) as to the passionate and romantic aspirations of their nature. *Romantic Geography* is thus a paean to the human spirit, which can lift us to the heights but also plunge us into the abyss.

Environmental sciences is a vast and multidisciplinary science that involves the study of natural resources of land, water, and air. *Introduction to Environmental Sciences* comprehensively covers numerous aspects of this vast subject. While some chapters focus the causes of environmental problems, others discuss methods and ways of mitigating these causes.

International experts provide a comprehensive picture of the principles, concepts and methods that are applicable to problems originating from the interaction between the living/non-living environment and mankind. Both the analysis of such problems and the way solutions to environmental problems may work in specific societal contexts are addressed. Disciplinary approaches are discussed but there is a focus on multi- and interdisciplinary methods. A large number of practical examples and case studies are presented. There is special emphasis on modelling and integrated assessment. This book is different because it stresses the societal, cultural and historical dimensions of environmental problems. The main objective is to improve the ability to analyse and conceptualise environmental problems in context and

to make readers aware of the value and scope of different methods. Ideal as a course text for students, this book will also be of interest to researchers and consultants in the environmental sciences. For the 2021 Exam!
