In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay

of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways.

*Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Medical care is an industry and private providers and hospitals are the major service providers. They operate on business principles. Hospitals are getting highly specialized and complex. The diagnostics and therapeutics are technology intensive. Private establishments have to compete with one another to remain in business. They strive to induct the best talent and latest technical know-how, resulting in ever-increasing costs to patients. Patients, who pay high charges, demand quality as a matter of right. To meet the challenge, hospitals are constrained to bring in professionalism in their systems and services. They appoint qualified professional managers to manage their clinics and hospitals with a view to sparing health professionals to focus on clinical care. Whether right or wrong, 'management' is often associated with authority and power. As a result, the medical professionals are reduced to secondary level in some organizations. To retain commanding positions in medical organizations, it has become necessary for the healthcare professionals to learn 'management', at least its basics. On the other hand, non-medical managers while managing healthcare services do not get the required cooperation from the medical professionals, as the latter are often secretive and not willing to share medical knowledge. If medical knowledge is demystified, non-medical managers can perform many functions in healthcare organizations proficiently. Both medical and non-medical

managers can complement each other in providing quality healthcare services. The book aims to orient clinicians (including physicians and nurses) and other healthcare professionals on the essentials of business management and to familiarize them with management terms and jargon. They can learn to be effective managers besides being health professionals. Similarly, non-medical managers can get familiarized to nuances of clinical care and special managerial requirements of healthcare facilities. They all will be able to relate processes in healthcare settings with the concepts of business management. They can develop expertise on patient relationship management
