The field of psychological assessment has been undergoing rapid change. The second edition of this Handbook, published in 1990, appeared at the beginning of a decade marked by extensive advances in assessment in essentially all of its specialized areas. There are many new tests, new applications of established tests, and new test systems. Major revisions have appeared of established tests, notably the Wechsler intelligence scales. The time seemed right for a third edition, since even over the relatively brief period of ten years, many tests described in the second edition have been replaced, and are no longer commonly used. Furthermore, much new research in such areas as neuropsychology, cognitive science, and psychopathology have made major impacts on how many tests and other assessment procedures are used and interpreted. This third edition represents an effort to give the reader an overview of the many new developments in assessment, while still maintaining material on basic psychometric concepts in order for it to continue to serve as a comprehensive handbook for the student and professional.

The authors are the leading experts in outcome assessment. * Call-out boxes, bullet points, icons, and other reader-friendly design elements are used extensively throughout the text. * Written in an engaging, easy-reference style.

Forensic Psychological Assessment in Immigration Court is an essential specialized guide for psychologists and clinicians who work with immigrants. Immigration evaluations differ in many ways from other types of forensic assessments because of the psycholegal issues that extend beyond the individual, including family dynamics, social context, and cross-cultural concerns.

Immigrants are often victims of trauma and require specialized expertise to elicit the information needed for assessment. Having spent much of their professional careers as practicing forensic psychologists, authors Evans and Hass have compiled a comprehensive text that draws on forensic psychology, psychological assessment, traumatology, family processes, and national and international political forces to present an approach for the effective and ethical practice of forensic psychological assessment in Immigration Court. No single factor determined the growth of this book. It may have been that as a novice researcher in Behavioral Psychology I experienced growing discontent with the direction of intellectual activity in which the accent was on methodology and measurement, with a distinct atmosphere of dogmatism, insecurity and defensiveness. The anathema of tender-mindedness was attached to any study of mental manifestations that avoided laboratory confirmation and statistical significance. Man in his uniqueness and unpredictable potentialities remained unexplored. Yet outside the systematic vivisection of variables and their measurement men of originality and genius were studying the mind in its complex yet natural interaction of aspirations, values and creative capacities. It was almost too easy for me to turn to them for the re-orientation of my psychological interest, and it was not difficult to find in Freud the most daring and penetrating representant of humanistic psychology.

Furthermore, it could have been the fact that Freud's thoughts on creative processes appeared to me at once starkly original and yet incomplete and fragmentary, that led me to reconsider and expand on them. Freud's fascination with culture and creativity, although frank and serious, led him to a peculiar indecisiveness and overcautiousness which was radically different from the dramatic boldness of his therapeutic methods and the depth of his personality theories. Grounded in 40 years of clinical practice and research, this book provides a systematic yet flexible evidence-informed
