How can an evaluator deal with ethical value issues in a way that does not smack of "ethical imperialism" or a knee-jerk prescriptive stance? Applied Ethics for Program Evaluation is aimed at sensitizing evaluators, potential clients, and stakeholders in program evaluation. Through use of vignettes, the authors provide the readers with ethical dilemmas and questions to stimulate thinking about the positive and negative consequences of each option. Following an introduction to ethical theories and principles, the authors propose a framework (based on Kitchner's five ethical principles) that can be used in weighing these options. The book concludes by providing valuable suggestions on how evaluators can make informed ethical decisions in their own evaluation practice.

Students and their parents/guardians rely on school counselors to provide counseling services based on ethically sound principles. However, there is a lack of empirical evidence about what influences a school counselor's ethical decision making. Ethical decision making for this study was defined as the degree to which decisions pertaining to confidentiality, parents' rights, and diversity and values align with professional codes of ethics and fundamental ethical principles. This study investigated the relationships between the dependent variable, school counselor ethical decision making, and the independent variables of (a) personality traits, (b) level of professional association membership, (c) level of involvement in professional associations, and (d) years of experience. Data were collected through a mixed-mode (online and paper-and-pencil) self-report survey distributed to school counselors in three states. A total of 167 school counselors, both with or without professional membership affiliation, participated in the study. Respondents provided data relative to demographics, the Keirsey Temperament Sorter II (Keirsey, 1998), and ethical scenarios developed by the principle researcher. Ethical scenario topics common in school counseling—confidentiality, parents' rights, and diversity and values—were utilized and specifically developed to be compatible with differing legal statutes and school policies across the three states in the study. Correlation and ANOVA statistical analyses were used to determine relationships between the factors and school counselor

ethical decision making. Results indicated differences in ethical decision making regarding confidentiality and parents' rights based on years of school counselor experience. Late career counselors showed ethical decision making more closely aligned with ethics codes on issues of parents' rights, however, less aligned on issues of confidentiality.

Polemic Paper from the year 2018 in the subject Medicine - Medical Frontiers and Special Areas, grade: 1, Egerton University, language: English, abstract:

This paper will provide a critical analysis of palliative seduction, especially with regard to ethical decision making in physician-assisted suicide. It is evident that nurses play pivotal roles in the implementation of palliative seduction. Arevalo et al (2013) state “that nurses are important participants in the different phases of implementation of palliative sedation; starting with the day-to-day care of terminally ill patients and their relatives” (p. 618). Palliative seduction has become one of the most contentious ethical issues in the United States of America. Consequently, ethical decision making has also become one of the most challenging issues to baccalaureate prepared nurses and society at large. Nurses experience immense challenges while caring for patients in palliative care, especially in making end-of-life decisions. Fernandes and Moreira (2012) reaffirm the challenges faced by nurses in ethical decision making by stating that nurses “consider that end-of-life decisions, privacy, interaction between nurse/patient and/or family, team work, and access to care arise in their daily life” (p. 81). This is, probably the principal reason as to why current debate over whether palliative seduction in physician-assisted suicide should be legalized or not has evoked unprecedented controversy in the society. From a critical approach, the issue of palliative seduction has been complicated by the doctrine of double effect. However, this doctrine does not have legal, empirical and ethical

relevance.

The massive growth of the Internet has made an enormous amount of information available to us. However, it is becoming very difficult for users to acquire an applicable one. Therefore, some techniques such as information filtering have been introduced to address this issue. Recommender systems filter information that is useful to a user from a large amount of information. Many e-commerce sites use recommender systems to filter specific information that users want out of an overload of information [2]. For example, Amazon.com is a good example of the success of recommender systems [1]. Over the past several years, a considerable amount of research has been conducted on recommendation systems. In general, the usefulness of the recommendation is measured based on its accuracy [3]. Although a high recommendation accuracy can indicate a user's favorite items, there is a fault in that only similar items will be recommended. Several studies have reported that users might not be satisfied with a recommendation even though it exhibits high recommendation accuracy [4]. For this reason, we consider that a recommendation having only accuracy is unsatisfactory. The serendipity of a recommendation is an important element when considering a user's long-term profits. A recommendation that brings serendipity to users would solve the problem of "user weariness" and would lead to

exploitation of users' tastes. The viewpoint of the diversity of the recommendation as well as its accuracy should be required for future recommender systems. The volume brings to life a number of the conference themes including corporate social responsibility, culture, academic integrity, vulnerability, health, military ethics, education, leadership, sustainability and philosophy and addresses concerns of many leading applied ethicists.

An annual prize is awarded for the best paper appearing in *Accounting Education: an international journal*, and this book contains the prize-winning papers for every year from 1992 to 2012. The journal's primary mission since the first issue was published in March 1992 has been to enhance the educational base of accounting practice, and all the papers in this book relate to that mission. These papers, reporting on research studies undertaken by accounting education scholars from around the world, build on research findings from the broader domain of education scholarship and embrace a wide array of topics – including: curriculum development, pedagogic innovation, improving the quality of learning, and assessing learning outcomes. Of particular interest are three themes, each of which runs through several of the papers: students' approaches to learning and learning style preferences; ethics and moral intensity; and innovation within the accounting curriculum. Accounting educators will find many ideas in the book to help them in enriching their work, and accounting education researchers will be able to identify many points of departure for extending the studies on which the papers report – whether comparatively or longitudinally. This book is a compilation of papers originally published in *Accounting Education: an international journal*.

The essential guide for ethical decision-making in the 21st century. It's not your imagination:

we're living in a time of moral decline. Publicly, we're bombarded with reports of government leaders acting against the welfare of their constituents; companies prioritizing profits over health, safety, and our best interests; and technology posing risks to society with few or no repercussions for those responsible. Personally, we may be conflicted about how much privacy to afford our children on the internet; how to make informed choices about our purchases and the companies we buy from; or how to handle misconduct we witness at home and at work. How do we find a way forward? Today's ethical challenges are increasingly gray, often without a clear right or wrong solution, causing us to teeter on the edge of effective decision-making. With concentrated power structures, rapid advances in technology, and insufficient regulation to protect citizens and consumers, ethics are harder to understand than ever. But in *The Power of Ethics*, Susan Liataud shows how ethics can be used to create a sea change of positive decisions that can ripple outward to our families, communities, workplaces, and the wider world—offering unprecedented opportunity for good. Drawing on two decades as an ethics advisor guiding corporations and leaders, academic institutions, nonprofit organizations, and students in her Stanford University ethics courses, Susan Liataud provides clarity to blurry ethical questions, walking you through a straightforward, four-step process for ethical decision-making you can use every day. Liataud also explains the six forces driving virtually every ethical choice we face. Exploring some of today's most challenging ethics dilemmas and showing you how to develop a clear point of view, speak out with authority, make effective decisions, and contribute to a more ethical world for yourself and others, *The Power of Ethics* is the must-have ethics guide for the 21st century.

leadership journey. Using a framework to guide those decisions can be crucial to advancing project leadership competence. This paper describes the strong connection between ethical decision making and project leadership success, depicts the role that an ethical decision-making model can play, and presents the new five-step PMI Ethical Decision-Making Framework (EDMF) created by the Ethics Member Advisory Group (Ethics MAG) and released PMI-wide. A realistic ethical dilemma is explored using the EDMF. A summary of the benchmarking of other organizations is included, indicating that PMI is at the front of the ethical decision-making trend.

This book takes a new approach to ethics by focusing on the kinds of dilemmas that confront people almost daily on the job. Guy presents the ten core values that surround ethical dilemmas, demonstrating the way in that personnel can sensitize themselves to the values involved in a problem and reach a solution which maximizes the important values. The author's unique contribution is to meld philosophy with everyday decision-making, offering the reader a common sense approach to making ethical decisions. Real-life case examples illustrate ethical dilemmas that involve personnel practices, organizing strategies, reporting functions, supervisory practices, whistleblowing, and more.

How do lawyers resolve ethical dilemmas in the everyday context of their practice? What are the issues that commonly arise, and how do lawyers determine the best ways to resolve them? Until recently, efforts to answer these questions have focused primarily on rules and legal doctrine rather than the real-life situations lawyers face in legal practice. The first book to present empirical research on ethical decision making in a variety of practice contexts, including corporate litigation, securities, immigration, and divorce law, *Lawyers in Practice* fills a substantial gap in the existing literature. Following an introduction emphasizing the increasing importance of understanding context in the legal profession, contributions focus on ethical dilemmas ranging from relatively narrow ethical issues to broader problems of professionalism, including the prosecutor's obligation to disclose evidence, the management of conflicts of interest, and loyalty to clients and the court. Each chapter details the resolution of a dilemma from the practitioner's point of view that is, in turn, set within a particular community of practice. Timely and practical, this book should be required reading for law

students as well as students and scholars of law and society.

New and experienced psychotherapists alike can find themselves overwhelmed by an ethical quandary where there doesn't seem to be an easy solution. This book presents positive ethics as a means to overcome such ethical challenges. The positive approach focuses on not just avoiding negative consequences, but reaching the best possible outcomes for both the psychotherapist and the client. The authors outline a clear decision-making process that is based on three practical strategies: the ethics acculturation model to help therapists incorporate personal ethics into their professional roles, the quality enhancement model for dealing with high-risk patients who are potentially harmful, and ethical choice-making strategies to make the most ethical decision in a situation where two ethical principles conflict. Throughout the decision-making process, psychotherapists are encouraged to follow four basic guidelines: Focus on overarching ethical principles Consider intuitive, emotional, and other nonrational factors Accept that some problems have elusive solutions Solicit input from colleagues and consultation groups Numerous vignettes illustrate how to apply positive ethics to many different ethical challenges that psychotherapists will likely encounter in practice.
