Now in its fourth edition, this classic text presents a comprehensive overview of client-centred hypnosis based on the teachings of Charles Tebbetts. Since the person undergoing hypnosis is the one with the power to change him/herself, the hypnotherapist acts as the facilitator, tailoring the hypnosis session to the client. All of the techniques found in *The Art of Hypnotherapy*, including regression therapy and parts theory, centre on this concept. *The Art of Hypnotherapy* shows students how all hypnotic techniques revolve around four main therapeutic objectives: Suggestion and Imagery; Discover the Cause; Release; and Subconscious Relearning. New features in this edition include an arrangement of techniques from simple to complex, so that those using hypnosis in a limited way easily learn the applicable technique; a chapter on the common application of hypnotherapy now includes new sections on anger, impotence, stuttering, and tinnitus, and the chapters on anchoring and triggers have been updated, with sections on how to help a client establish a safe place, and why this is important.

The fourth edition of *Community Organizing and Community Building for Health and Social Equity* provides both classic and recent contributions to the field, with a special accent on how these approaches can contribute to health and social equity. The 23 chapters offer conceptual frameworks, skill- building and case studies in areas like coalition building, organizing by and with women of color, community assessment, and the power of the arts, the Internet, social media, and policy and media advocacy in such work. The use of participatory evaluation and strategies and tips on fundraising for community organizing also are presented, as are the ethical challenges that can arise in this work, and helpful tools for anticipating and addressing them. Also

included are study questions for use in the classroom. Many of the book's contributors are leaders in their academic fields, from public health and social work, to community psychology and urban and regional planning, and to social and political science. One author was the 44th president of the United States, himself a former community organizer in Chicago, who reflects on his earlier vocation and its importance. Other contributors are inspiring community leaders whose work on-the-ground and in partnership with us "outsiders" highlights both the power of collaboration, and the cultural humility and other skills required to do it well. Throughout this book, and particularly in the case studies and examples shared, the role of context is critical, and never far from view. Included here most recently are the horrific and continuing toll of the COVID-19 pandemic, and a long overdue, yet still greatly circumscribed, "national reckoning with systemic racism," in the aftermath of the brutal police killing of yet another unarmed Black person, and then another and another, seemingly without end. In many chapters, the authors highlight different facets of the Black Lives Matter movement that took on new life across the country and the world in response to these atrocities. In other chapters, the existential threat of climate change and grave threats to democracy also are underscored.

Art and science work is experiencing a dramatic rise coincident with burgeoning Science and Technology Studies (STS) interest in this area. Science has played the role of muse for the arts, inspiring imaginative reconfigurations of scientific themes and exploring their cultural resonance. Conversely, the arts are often deployed in the service of science communication, illustration, and popularization. STS scholars have sought to resist the instrumentalization of the arts by the sciences, emphasizing studies of theories and practices across disciplines and the distinctive and complementary contributions of each. The manifestation of this commonality of creative and epistemic practices is the emergence of Art, Science, and Technology Studies (ASTS) as the interdisciplinary exploration of art–science. This handbook defines the modes, practices, crucial literature, and research interests of this emerging field. It explores the questions, methodologies, and theoretical implications of scholarship and practice that arise at the intersection of art and STS. Further, ASTS demonstrates how the arts are intervening in STS. Drawing on methods and concepts derived from STS and allied fields including visual studies, performance studies, design studies, science communication, and aesthetics and the knowledge of practicing artists and curators, ASTS is predicated on the capacity to see both art and science as constructions of human knowledge-making. Accordingly, it posits a new analytical vernacular, enabling new ways of seeing, understanding, and thinking critically about the world. This handbook provides scholars and practitioners already familiar with the themes and tensions of art–science with a means of connecting across disciplines. It proposes organizing principles for thinking about art–science across the sciences, social sciences, humanities, and arts.

Encounters with art and science become meaningful in relation to practices and materials manifest as perceptual habits, background knowledge, and cultural norms. As the chapters in this handbook demonstrate, a variety of STS tools can be brought to bear on art–science so that systematic research can be conducted on this unique set of knowledge-making practices. In this totally revised 4th edition, Larry Swartz digs deeply into the riches of the past three books and considers the experiences of language arts teachers who have used all three versions for almost three decades. Full of engaging new ideas, the book includes many new sources and carefully chosen strategies for exploring challenging issues with students, including identity, poverty, diversity, bullying, and immigration. Literary sources are at the root of this amazing book, and encompass picture books, novels, poetry, scripts, and photographs. Compelling strategies throughout the book are designed to enrich interactive possibilities amongst learners in the language arts classroom. By reading, writing, and talking both in and out of role, students can develop and share their responses, stories, and ideas. A bestselling classroom resource for almost thirty years, Dramathemes is an ideal book for teachers who want to put drama into literacy programs, and literacy into drama programs.

Over the past few decades, the use of the arts in health has burgeoned. What, for many centuries, was seen as a fringe activity is now being recognised as a field that has enormous potential for impacting positively on both individuals and societies. However, despite this surge in interest and activity, there is still limited support available for people working in the field. Although the number of practical training courses for artists is growing and more universities are establishing research groups, most training activity occurs in either practice or research; there are relatively few opportunities to gain parallel experience in both. Arts in Health: Designing and Researching Interventions provides a complete overview of how to go about undertaking research and practice in the field of arts in health. It starts by exploring the context for arts in health interventions, including the history of the use of arts in health and the theoretical and political developments that have laid the foundations for its flourishing. It also considers what 'arts in health' encompasses and the range of disciplines involved. Part II examines how to design an arts in health intervention, develop partnerships and find funding and considers the sensitivities around working in healthcare. Part III considers the value of research for the field of arts in health and how to design and undertake a research project. Finally, part IV provides a fact file of arts in health research and practice, showing how the arts can be applied and the benefits they can bring across a range of medical disciplines. The book will be valuable for researchers, practitioners, healthcare professionals and those interested in learning more about the field.

The real world of professional ethics in art therapy is, more times than not, a spectrum of shades of gray. In this exceptional new fourth edition, the authors raise questions and provide information related to the many ethical dilemmas art therapists face. Several chapters refer to the Ethical Principles for Art Therapists and Code of Professional Practice of the Art Therapy Credentials Board. Changes that were made to the AATA Ethics Document in 2013 are discussed. Models of how to think through and resolve the difficult ethical problems art therapists encounter during their professional lives are presented. A chapter discussing burnout and compassion fatigue—"costs of caring"—provides an understanding of the responsibility that systems hold in supporting therapists and clients. Within each chapter, there are dilemma-laden vignettes intended to stimulate reflection and discussion. Most chapters include a series of questions pertaining to practical applications aimed at helping to review the material, formulate, and clarify positions on key issues. Also included are suggested artistic tasks intended to help the reader engage with topics in meta-cognitive, kinetic, visual, and sensory methods. Compelling illustrations throughout the text are provided as examples of creative responses to the artistic tasks. In addition, informational topics dealing with ethical violations, rights of artworks, marketing, advertising, and publicity are explored. The importance of multicultural approaches is expanded with the discussion that competence is a baseline for practice as an art therapist. Significant updates were made to the chapter that explores art therapy in the digital age. The appendices contain ethics documents of the British Association of Art Therapists for comparison. This unique book is designed for art therapy students, art therapists, expressive arts therapy professionals, and will be a useful and supplemental textbook for art therapy courses dealing with professional ethics and supervision, art therapy theory and practice.
