The Handbook of Infant, Toddler, and Preschool Mental Health Assessment brings together, for the first time, leading clinical researchers to provide empirically based recommendations for assessment of social-emotional and behavior problems and disorders in the earliest years. Each author presents state-of-the-art information on scientifically valid, developmentally based clinical assessments and makes recommendations based on the integration of developmental theory, empirical findings, and clinical experience. Though the field of mental health assessment in infants and young children lags behind work with older children and adults, recent scientific advances, including new measures and diagnostic approaches, have led to dramatic growth in the field. The editors of this exciting new work have assembled an extraordinary collection of chapters that thoroughly discuss the conceptualizations of dysfunction in infants and young children, current and new diagnostic criteria, and such specific disorders as sensory modulation dysfunction, sleep disorders, eating and feeding disorders, autistic spectrum disorders, anxiety disorders, posttraumatic stress disorder, and ADHD. Chapters further highlight the importance of incorporating contextual factors such as parent-child relationship functioning and cultural background into the assessment process to increase the validity of findings. Given the comprehensiveness of this groundbreaking volume in reviewing conceptual, methodological, and research advances on

early identification, diagnosis, and clinical assessment of disorders in this young age group, it will be an ideal resource for teachers, researchers, and a wide variety of clinicians including child psychologists, child psychiatrists, early intervention providers, early special educators, social workers, family physicians, and pediatricians.

Risk assessment has become the backbone of health and safety management in the UK and elsewhere. Employers have a legal duty to prove that risk assessments have been carried out and to ensure that appropriate precautions have been implemented. Mike Bateman demystifies the risk assessment process and how it relates to UK legislation. He covers both the general techniques and the assessment of specific risks, such as hazardous substances (COSHH), noise, manual handling, Display Screen Equipment (DSE) workstations, Personal Protective Equipment (PPE), fire, asbestos and work at height. The book is practical in its approach to risk assessment rather than being overly legalistic or academic and tells the reader how to go about risk assessment, not just what the legislation requires. It contains numerous checklists, forms and worked examples for a variety of hazards and industries. This edition has been fully updated to take into account the impact of the following requirements on risk assessments: Work at Height Regulations 2005 – full new chapter Control of Noise at Work Regulations 2005 Regulatory Reform (Fire Safety) Order (RRFSO) 2006 Mike Bateman runs his own health and safety consultancy and specialises in risk assessments. He is a corporate member of IOSH and a registered health and safety practitioner.

THE FAMILY ASSESSMENT HANDBOOK is a basic practice guide for social work students and beginning human service professionals of "how to" do a family assessment for case intervention. It is based on person-environment (or, family systems) theory, drawing from evidence-based research for guiding practice decisions. This practical book presents the interplay of social work concepts, values, and skill dilemmas presented using case studies from the author's practice experience. By developing a "family journal," students can apply family systems thinking, theory, and concepts. The book is conceptualized as three teaching and learning units: Part One addresses the family systems assessment model; Part Two focuses on self-assessment and critical thinking through exploring the student's family system; and Part Three includes four case studies that illustrate the text's concepts.

Based on over 30 years of successful teaching experience in this course, Robert Pagano's introductory text takes an intuitive, concepts-based approach to descriptive and inferential statistics. He uses the sign test to introduce inferential statistics, empirically derived sampling distributions, many visual aids, and lots of interesting examples to promote student understanding. One of the hallmarks of this text is the positive feedback from students -- even students who are not mathematically inclined praise the text for its clarity, detailed presentation, and use of humor to help make concepts accessible and memorable. Thorough explanations precede the introduction of every formula, and the exercises that immediately follow include a step-by-step model that lets students compare their work against fully solved examples. This combination makes the text perfect for students taking their first statistics course in psychology or other social and behavioral sciences.
