This book is a practical, symptom-based, 'how-to' guide to neuro-ophthalmology and acquired strabismus for all trainee and practising ophthalmologists. Each chapter focusses on a specific clinical symptom and includes an introduction to the clinical assessment of a symptom; an examination checklist; a management flowchart to be followed; clinical diagnostic criteria checklists; and further information on the diseases that can cause the symptom with a brief discussion of appropriate management. A practical and accessible handbook for the ophthalmologist without a specialist interest in neuro-ophthalmology and acquired strabismus. The text simplifies a subject which is often a cause of litigation against practising ophthalmologists and exam failure for trainees and residents. The book aids diagnosis in a field in which mistakes may lead to medico-legal problems, e.g. brain tumours presenting with blurred or double vision. The book leads the reader from the symptom, through a series of simple but safe flowcharts and check-lists, to the diagnosis or the tests which need to be ordered. The first chapter presents 20 'golden rules' to keep you and your patients out of trouble. A revised text with some new illustrations brings this highly-praised book up to date. New online videos demonstrate abnormal eye movements, eyelid problems and pupil abnormalities.

This title is directed primarily towards health care professionals outside of the United States. From simple routine first opinion cases to referrals and more complex clinical scenarios, the series provides the essential knowledge that will lead to improved skills and practice for veterinary practitioners undertaking clinical professional development or students nearing the end of their courses and needing a vital examination revision aid. New case-based approach helps relate essential theory to the real world of the busy clinic Each case outlines: initial presentation, clinical signs, examination techniques, differential diagnoses, treatment options, clinical tips and relevant nursing information Highly illustrated using full colour throughout so key information can be found at a glance Numerous self-assessment tests and multiple choice questions with remediation Ideally suited for CPD and as an exam revision aid

Imagine trusting a doctor—with the best reputation in the state—to do surgery on your eyes. Now imagine the worst of outcomes. Blindness in an eye that you learn, in fact, never needed surgery. And the medical center where you were treated is ignoring the problem. Waking Up Blind is the story of how an eye surgeon became the cause of an array of medical problems for his patients. It is also the story of how one of the nation's premier medical centers tried to conceal the growing scandal. The faculty who exposed the problems were punished. Official committees and the university leaders minimized the misconduct. Slowly, lawsuits and publicity brought some to light in bits and pieces. With the use of court documents, transcripts of tape-recorded conversations, interviews, and personal observation, Dr. Tom Harbin presents this case from the very beginning, uncovering all levels of wrongdoing and secrecy. Waking Up Blind will shock the reader with its candid exploration of the dark side of medicine.

Better Eyesight Without Glasses is not only the definitive source for the classic Bates Method, it is in itself a remarkable phenomenon. Dr. William H. Bates's revolutionary and entirely commonsensical theory of self-taught improved eyesight has helped hundreds of thousands of people to triumph over normal defects of vision without the mechanical aid of eyeglasses. If you think that your eyesight could be made better by natural methods, you are right. After years of experimentation, Dr. Bates came to the conclusion that many people who wore glasses did not need them. He gradually and carefully developed a simple group of exercises for improving the ability of the eyes themselves to see, eliminating the tension caused by poor visual habits that are the major cause of bad eyesight. These exercises are based on the firm belief that it is the natural function of the eyes to see clearly and that anyone, child or adult, can learn to see better without glasses.

Dr. William H. Bates discovered Natural Eyesight Improvement, 'The Bates Method'. His Experiments prove that tension in the outer eye muscles (oblique and Recti) disrupt, change the shape of the eye and

focus of light rays in the eye resulting in; unclear close and distant vision, astigmatism, crossed, wandering eyes, cataract, glaucoma and other abnormal eye conditions. He proved that the outer eye muscles, (oblique) when relaxed, contracting, un-contracting normally change the shape of the eye to normal to produce clear close and distant vision. Relaxed ciliary, iris, tear gland and other inner, outer eye muscles also function correct, produce clear vision, healthy eyes. Mental, emotional strain, tension, using the eyes incorrect is the main cause of outer eye muscle, eye tension and unclear vision. Dr. Bates proved that relaxation of the mind, body, outer eye muscles results in a return of the eye to normal shape with correct focus of light rays in the eyes, on the retina with clear vision at all distances, removal of astigmatism and other eye problems, keeps the eyes healthy with normal circulation, eye pressure, correct function of the optic and other eye, visual system nerves. Abnormal pressure, tension, pulling on/in the eye, lens, retina is removed. The eye muscles; outer (oblique, recti & muscles for blinking, tears...) and inner (ciliary, iris... muscles near and attached to the lens) function correct producing perfect; convergence, accommodation for clear close and reading vision, divergence, un-accommodation for clear distant vision. Shifting 'eye movement' with Central-Fixation (central vision) and function of the retina, lens, brain, entire visual system are perfect. A few of Dr. Bates older articles were based on the beliefs of most Ophthalmologists. As Dr. Bates cured his own vision naturally, treated his patients, performed experiments on the eyes, eye muscles, nerves-he changed his view on accommodation and other eye functions. He then practiced, applied natural eye, vision treatments without the use of eyeglasses, surgery, drugs. This is the origin of Natural Eyesight Improvement. Dr. Bates recorded all his natural treatments, work in his Clinic in New York City, U.S.A. and other hospitals, locations during his lifetime in his book 'The Cure Of Imperfect Sight By Treatment Without Glasses' & 11 years, 132 Issues of his Monthly Better Eyesight Magazine. Eyeglasses are often prescribed unnecessarily or 'too strong' (over-corrected) due to temporary nervousness, pressure to hurry, limited, incorrect eye, head, neck, body movement during an eye exam. Eye doctors also prefer to prescribe an 'extra stronger strength' to the eyeglass lenses. All eyeglasses, especially strong eyeglass lenses, bifocals, astigmatism lenses, sunglasses cause fast, increased vision impairment and prescriptions for stronger eyeglass lenses. This leads to increased vision impairment, cataracts and other eye health, vision impairment. Prostate cancer is unusual among solid tumors in that the majority of affected men die with, rather than of, the disease. This presents many challenges to healthcare professionals and patients in terms of deciding if, when and how to intervene in order to control tumor growth and spread, thereby extending survival but without compromising quality of life. This is the ninth edition of 'Fast Facts: Prostate Cancer' since 1996, testament to the rapid changes in the field and the steadily improving outlook for patients. This new edition provides many key updates: • the Gleason grade grouping, which has valuable prognostic value • nomograms to evaluate risk • our rapidly expanding understanding of the genetics and underlying pathogenesis of prostate cancer and the development of genomic tests to help identify those at greatest risk of developing clinically significant disease • the continuing debate about the role of PSA in the screening, detection and monitoring of prostate cancer • advances in imaging techniques, particularly multiparametric MRI, which is improving the accuracy of biopsy and reducing the numbers of negative biopsies • the roles of drugs, surgery and radiotherapy in the treatment of prostate cancer at different stages, and our ever-improving understanding of when and how best to intervene, aided by improving understanding of the risk factors for disease progression. Primarily intended for primary care providers, specialist nurses, junior doctors and allied healthcare professionals, this highly readable resource provides a comprehensive overview of prostate cancer, enabling fully informed discussions with patients about this complex disease. Contents: • Epidemiology and pathophysiology • Diet, lifestyle and chemoprevention • Screening and early detection • Diagnosis, staging and prognostic indicators • Management of clinically localized disease • Managing recurrence after initial therapy • Management of metastatic prostate cancer • Management of castrate-resistant prostate cancer • Survivorship and treatment complications
