Financial innovation allows companies and other entities that wish to raise capital to choose from a myriad of possible instruments that can be tailored to meet the specific business needs of the issuer and investor. However, such instruments put increasing pressure on a question that is fundamental to the tax and financial systems of a country – the distinction between debt and equity. Focusing on hybrid financial instruments (HFIs) – which lie somewhere along the debt-equity continuum, but where exactly depends on the terms of the instrument as well as on applicable laws – this book analyses their treatment under both domestic law and tax treaties. Key jurisdictions, including the EU, some of its Member States, and the United States, are covered. Advocating for a broader scope of application of HFIs as part of the financing of companies in Europe alongside traditional sources of debt and equity financing, the book addresses such issues

and topics as the following: • problems associated with the debt-equity distinction in international tax law; • cross-border tax arbitrage and linking rules; • drivers behind the use and design of HFIs; • tax law impact of perpetual and super maturity debt instruments, profit participating loans, convertible bonds, mandatory convertible bonds, contingent convertibles, preference shares and warrant loans on HFIs; • financial accounting treatment; • administrative guidance; • influence of the TFEU on Member States' approaches to classification of HFIs; • interpretation of the Parent-Subsidiary Directive by the European Court of Justice; • applicability of the OECD Model Tax Convention; and • implications of the OECD Base Erosion and Profit Shifting (BEPS) project. Throughout this book, the analysis draws upon preparatory works, case law, and legal theory in English, German, and the Scandinavian languages. In conclusion, the author considers tax policy issues, and identifies and outlines possible high-level solutions. Actual or potential users of HFIs will greatly appreciate the clarity and insight offered here into the capacity and tax implications of HFIs. The book not only examines whether existing legislation is sufficient to handle the issues raised by international HFIs, but also provides an in-depth analysis of the interaction between corporate financing and tax law in the light of today's financial innovation. Corporate executives and their counsel will find it indispensable in the international taxation landscape that is currently coming into view, and academics and policymakers will hugely augment their understanding of a complex and constantly changing area of tax law.

Why is international cooperation on taxation so difficult to achieve? The problems in international taxation arise from a sovereignty conflict between the country in which the income originates (source country) and the country in which the recipient of the income resides (residence country). This book explores the equally valid sovereign tax claims of source and of residence countries and highlights the incompatibility of these concurrent tax claims. The resulting incoherence between source and residence countries distorts taxation of cross-border income to a point where it not only creates discriminations but challenges the fundamental principles of international taxation in itself. This is an essential dilemma of international tax policy. And yet, given the profound role the power to tax plays in exercising sovereignty, are governments able, or even willing, to eliminate this essential dilemma?

The papers in Tax Policy and the Economy Volume 31 are all directly related to important and often long-standing issues, often including how transfer programs affect tax rates and behavior. In the first paper, Alan Auerbach, Laurence Kotlikoff, Darryl Koehler, and Manni Yu take a lifetime perspective on the marginal tax rates facing older individuals and families arising from a comprehensive set of sources. In the second, Gizem Kosar and Robert A. Moffitt provide new estimates of the cumulative marginal tax rates facing low-income families over the period 1997-2007. In the third paper, Emmanuel Saez presents evidence on the elasticity of taxable income with respect to tax rates, drawing on data from the 2013 federal income tax reform. In the fourth, Conor Clarke and Wojciech Kopczuk survey the treatment of business income taxation in the United States since the 1950s, providing new data on how business income and its taxation have evolved over time. In the fifth paper, Louis Kaplow argues that the reduction in statutory tax rates from base-broadening may not reduce effective marginal tax rates on households.

Developments in methodologies, agglomeration, and a range of applied issues have characterized recent advances in regional and urban studies.
