This paper focuses on the sluggish growth of world trade relative to income growth in recent years. The analysis uses an empirical strategy based on an error correction model to assess whether the global trade slowdown is structural or cyclical. An estimate of the relationship between trade and income in the past four decades reveals that the long-term trade elasticity rose sharply in the 1990s, but declined significantly in the 2000s even before the global financial crisis. These results suggest that trade is growing slowly not only because of slow growth of Gross Domestic Product (GDP), but also because of a structural change in the trade-GDP relationship in recent years. The available evidence suggests that the explanation may lie in the slowing pace of international vertical specialization rather than increasing protection or the changing composition of trade and GDP.

understand how economic concepts play out in our world. This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers. This book is carefully designed and correlated to the thirteen telecourse video programs to enrich your understanding of economic principles.

As awareness of the process of globalization grows and the study of its effects becomes increasingly important to governments and businesses (as well as to a sizable opposition), the need for historical understanding also increases. Despite the importance of the topic, few attempts have been made to present a long-term economic analysis of the phenomenon, one that frames the issue by examining its place in the long history of international integration. This volume collects eleven papers doing exactly that and more. The first group of essays explores how the process of globalization can be measured in terms of the long-term integration of different markets—from the markets for goods and commodities to those for labor and capital, and from the sixteenth century to the present. The second set of contributions places this knowledge in a wider context, examining some of the trends and questions that have emerged as markets converge and diverge: the roles of technology and geography are both considered, along with the controversial issues of globalization's effects on inequality and social justice and the roles of political institutions in responding to them. The final group of essays addresses the international financial systems that play such a large part in guiding the process of globalization, considering the influence of exchange rate regimes, financial development, financial crises, and the architecture of the international financial system itself. This volume reveals a much larger picture of the process of globalization, one that stretches from the establishment of a global economic system during the nineteenth century through the disruptions of two world wars and the
