For courses in Probability and Random Processes. Probability, Statistics, and Random Processes for Engineers, 4e is a comprehensive treatment of probability and random processes that, more than any other available source, combines rigor with accessibility. Beginning with the fundamentals of probability theory and requiring only college-level calculus, the book develops all the tools needed to understand more advanced topics such as random sequences, continuous-time random processes, and statistical signal processing. The book progresses at a leisurely pace, never assuming more knowledge than contained in the material already covered. Rigor is established by developing all results from the basic axioms and carefully defining and discussing such advanced notions as stochastic convergence, stochastic integrals and resolution of stochastic processes.

By reducing mathematical detail and focusing on real-world applications, this book provides engineers with an easy-to-understand overview of stochastic modeling. An entire chapter is included on how to set up the problem, and then another complete chapter presents examples of applications before doing any math. A previously unpublished computational method for solving equations related to Markov processes is added. The book shows how to add costs or revenues to the basic probability structures without much additional effort. In addition, numerous examples are included that show how the theory can be used. Engineers will also find explanations on how to formulate word problems into the models that the math worked on. For the first time the theme of Barahmasa has been dealt with thoroughly in this pioneering work. The book has been divided into eight chapters: The seasons and months in (i) ancient Indian Inscriptions and (ii) in the Sanskrit literature; Barahmasa in (iii) Regional Indian literature and (iv) in the Hindi literature; (v) Seasons and the Raga-Raginis; (vi) Seasons and months in Islamic arts; (vii) Seasons and the 'Labour of months' in Western Art; and (viii) the Barahmasa in Indian Miniature Paintings.

Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban

Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of

modelling techniques developed specifically for these plants. Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.

In this revelatory and original book, award-winning author of the acclaimed surf memoir *On a Wave* illuminates the connection between waves, addiction, and recovery, exploring what surfing can teach us about the powerful undertow of addictive behaviors and the ways to swim free of them. Addiction is arguably the dominant feature of contemporary life: sex, gambling, exercise, eating, shopping, Internet use—there's virtually no pleasurable activity that can't morph into a destructive obsession. For Americans under the age of fifty-five, the leading cause of death is drug overdose. But there is another side of addiction. In some instances, the very activities that can lead to addiction can also lead out of it. As neurologists have recently discovered, surfing is a kind of study in the mechanism of addiction, delivering dopamine to the "pleasure" center of the brain and reshaping priorities and desire in a feedback loop of narrowing focus. Thad Ziolkowski knows this dynamic intimately. A lifelong surfer, he has been surrounded by addiction since his boyhood. In this unique, groundbreaking book,

part addiction memoir, part sociological study, part spiritual odyssey, Ziolkowski dismantles the myth of surfing as a radiantly wholesome lifestyle immune to the darker temptations of the culture and discovers among the rubble a new way to understand and ultimately overcome addiction. Combining his own story with insights from scientists, progressive thinkers and the experiences of top surfers and addicts from around the world, Ziolkowski shows how getting on a board and catching a wave is a unique and deeply instructive means of riding out of the darkness and back into the light. Yet while surfing is his salvation, its lessons can be applied to other activities that can pull us free from the lethal undertow of addiction and save lives.
