Paul Grimwood has responded and worked from over a hundred fire stations in the USA and Europe. In this, his third book, he demonstrates how the very best strategies and tactical approaches from Europe and the USA may be effectively combined to enhance firefighter tactics and safety at structure fires. The book also covers and exceeds the 2007 syllabus of the European (UK) EDEXCEL CFBT Instructor Qualification (90 hours) for practical Fire Behavior Training (flashover training in ISO shipping containers and other FDS units). Euro Firefighter is for the CFBT instructor, firefighter, company officer and fire chief. The concept of teaching about flashover using ISO steel shipping containers was developed in Europe -- now read how European instructors teach fire behavior using a vast array of Fire Development Simulators (FDS). This book will also take you out onto the fire-grounds of London, New York, Madrid, Chicago, Paris, Germany and Sweden, demonstrating how similar fires are fought using different strategic approaches and showing how US and EURO firefighting tactics are gradually aligning in many areas. From tactical ventilation to air management, from Rapid Intervention Teams to high-rise firefighting and limited staffing, the author brings you the best tactics from Europe and the USA in one training manual! Written in such a way that the training officer can immediately transfer key learning points directly into training presentations, the core principles of this training package enhance firefighter safety on the fire-ground. The book also provides a LINK CODE for ongoing updates and web-based downloads. Euro Firefighter covers a broad range of issues important to anyone who steps off a fire truck at the scene of an emergency.

This study guide is meant as an accompaniment to the book *Strategic and Tactical Considerations on the Fireground, Third Edition* written by retired Deputy Chief James P. Smith of the Philadelphia, PA, Fire Department and published by Brady/Prentice-Hall. It is not meant to be an all-inclusive text or to answer all-encompassing questions; it is meant to reinforce the text after it is read. In many cases the questions are narrow in design and emphasize specific points made within the text.

Brannigan's Building Construction for the Fire Service, Fourth Edition is a must read for fire fighters, prospective fire fighters, and fire science students. This edition continues the Brannigan tradition of using plain language to describe technical information about different building types and their unique hazards. This text ensures that critical fire fighting information is easy-to-understand and gives valuable experience to fire fighters before stepping onto the fireground. The first edition of Building Construction for the Fire Service was published in 1971. Frank Brannigan was compelled to write the most comprehensive building construction text for the fire service so that he could save fire fighters' lives. His passion for detail and extensive practical experience helped him to develop the most popular text on the market. His motto of: "Know your buildings," informs every aspect of this new edition of the text. Listen to a Podcast with Brannigan's Building Construction for the Fire Service, Fourth Edition co-author Glenn Corbett to learn more about this training program! manual is divided into two sections to make a clear distinction between the information needed for Fire Officer Level I and Fire Officer Level II. Both print and eBook formats are available. There is no shortage of issues that a company officer might face in the everyday operation of a fire company or unit. This manual addresses the wide range of topics and issues encountered by a company officer, from leadership and supervision to health and safety issues. Great attention was given to focus on the job performance requirements of NFPA® 1021. The fifth edition of Fire and Emergency Services Company Officer builds on the previous edition of the manual while presenting the material in a more concise manner to make it easier for students to read and instructors to teach. By merging related topics, the number of chapters was reduced from 32 in the fourth edition to 17 in the new manual while preserving the material related to the NFPA® standard. The number of appendices was reduced from 20 to 4 by removing information that can be found in other media. Along with reducing the volume of material from the fourth edition, the fifth edition of Fire and Emergency Services Company Officer offers several new features. The manual features a new look with IFSTA's single-column format and upgraded and updated curriculum components. Learning activities are included to help instructors present the material to their students. Case Histories open each chapter to illustrate important lessons learned in the real world. Photographs, illustrations, and tables are included throughout the manual to illustrate key points and improve the overall instructional value of the material.

Management System. Additional Items Related To Fire Fighter Safety And Health Are Included.

Risk management is one of the most important but frequently ignored fireground management skills. The volunteer fire service is particularly vulnerable because of a lack of understanding and training in a risk management system, why we need it, how it works, and how to use it. What are some risk reduction strategies? How do you identify risks and dangers and how they affect firefighters? How do you control those risks and limit danger to firefighters? How often have firefighters taken unnecessary risks? Firefighting is a dangerous job, but risks need to be measured against the capabilities of the responding firefighters. Do their capabilities match the immediate needs of the size-up? What about your personal capabilities? Are you truly prepared?

This text deals with the basics of wildland and forest firefighting. It has been totally revised and is now in full color.

From Book's Introduction: Today fire departments use many terms for educational fire and injury prevention programs. Programs differ in size and approach, but the goals are the same: Change the behavior of the public so that there are fewer dangerous situations, fires, and injuries. This guide uses a five-step planning process for developing and implementing successful fire and life safety public education programs. From identifying the fire and injury risks in the community, developing and implementing a program, and evaluating the results, planning is the process that ensures that the program strategies and initiatives really address the problems. This updated guide recognizes that fire prevention is now an important part of the larger goal of preventing injuries and unsafe situations. Fire departments often provide emergency medical services. Preventing injury, illness, and other unsafe situations is often part of the mission of saving lives.

Chief Dunn—the recipient of FDNY's Lifetime Achievement Award—has updated his classic book on how to identify and survive hazards on the fireground. Dunn attempts to reduce firefighter deaths and injuries year after year by describing the

15 most dangerous tactics and the 13 most recurring fire and explosion environmental dangers, ranked by degree of danger and frequency of occurrence. This indispensable book will help keep every first responder, firefighter, and fire officer out of harm's way. It is a must-read and reread for every firefighter who responds to fires and emergencies, every company officer who commands a fire company, and every incident commander or safety officer who is responsible for the safety of firefighters on the fireground. NEW TO THIS EDITION • Examination of "aggressive interior firefighting attack" and "nonaggressive attack" • Discussion of risk intensity and risk frequency at the fireground • Visual representation and discussion of the NIST five-stage time/temperature fire growth curve showing temperatures before and after firefighter venting • Coverage of the Columbia University Capstone Project: FDNY Property Saved Indicator, with a formula to quickly calculate the dollar amount of property saved at a structure fire • Updated statistics, graphs, and charts

The core principles of structural firefighting are fire behavior, building construction, strategy, tactics, safety and training. Each core principle is examined with relevant on-the-job stories to bring lessons home. Fire departments must constantly train their firefighters and officers in these core principles if they want them to be safe and effective at structure fires. Training is the foundation of all the other core principles, and must be realistic, scenario-based, and hands-on. Never stop learning during your time as a structural firefighter. If you come to a point where you mistakenly believe that you know everything there is to know about fires in and around buildings-watch out-because you have just fallen into the complacency trap.

Evidence-Based Practices for Strategic and Tactical Firefighting is a synopsis of the UL/NIST research studies and experiments on fire behavior and techniques for ventilation, fire suppression, and search and rescue as a result of the changes in modern building construction and furnishing materials. As a result of these changes, today's fires release energy faster, reach flashover potential sooner, may reach higher temperatures, and are much more likely to become ventilation-limited than building fires of even a few years ago. Developed in partnership with the International Association of Fire Chiefs (IAFC) and National Fire Protection Association (NFPA), Evidence-Based Practices for Strategic and Tactical Firefighting details many of the findings discovered as the result of an ongoing series of experiments conducted by NIST, UL, and the New York City Fire Department (FDNY) and provides the most up-to-date information available today for Fire Fighter, Fire Officer, and Fire Science students. Additional information about these –and other fire experiments can be obtained online at the NIST website by searching under Fire– Fighting Technology and at the UL website by searching
