The magazine covers General Knowledge, Science and Technology news, Interviews of toppers of examinations, study material of Physics, Chemistry, Zoology and Botany with model papers, reasoning test questions, facts, quiz contest, general awareness and mental ability test in every monthly issue.

Modern technologies are central to creation of wealth through business expansion leading to economic development. This is visible in the fast-paced technology-induced economic growth experienced by most countries, especially by rapidly growing economies such as India, China, Brazil, South Korea, among others. Increasing individual scientific contribution, nurturing entrepreneurial talent, promoting innovative competence, strategically prioritizing and investing in technologies and enhancing national economic wealth are some of the important Technology Management goals. Technology Management has emerged as a strategic and knowledge domain of interest to academicians, practitioners, and policy makers across the globe. Technology Management has also evolved into an inter-disciplinary concern which requires national and international collaborations and exchange of insights. Keeping this objective in mind the International Conference on Technology Management is organized by the Department of Management Studies, Indian Institute of Science, Bangalore, a leader in research and education in Technology Management for the last several decades. This conference aims at integrating experiences of academicians, industry leaders, Technology Managers and Innovators towards effective knowledge creation and economic development. The contributions of the present volume are presented at the International Conference on Technology Management-2012 during 18-20 July 2012.

World Bank Technical Paper No. 382. This technical paper compares and contrasts the governance and regulation of new style power pools in Australia, Canada, Norway, Sweden, and the United Kingdom. These trading markets in electricity commodities and services are explored in various ways. The authors review the basic governance models, compare decisionmakers in the industry, examine market surveillance methods used, and explore the role of government and the regulator. The paper emphasizes the lessons that can be learned from international experiences.

This is one of the first single-author comparisons of different South Asian states around the theme of religious conflict. Based on new

research and syntheses of the literature on 'communalism', it argues that religious conflict in this region in the modern period was never simply based on sectarian or theological differences or the clash of civilizations. Instead, the book proposes that the connection between religious radicalism and everyday violence relates to the actual (and perceived) weaknesses of political and state structures. For some, religious and ethnic mobilisation has provided a means of protest, where representative institutions failed. For others, it became a method of dealing with an uncertain political and economic future. For many it has no concrete or deliberate function, but has effectively upheld social stability, paternalism and local power, in the face of globalisation and the growing aspirations of the region's most underprivileged citizens.

Foreword by Prof. Kaushik Basu This book traces the development experience of one of India's most dynamic and prosperous states, Punjab, which has provided the country with a much-needed degree of food security. The relative regression of Punjab's economy in the post-economic reforms period and slow current economic growth give cause for concern. The contributions in this book address the question of why the structural transformation of Punjab's economy has fallen into the middle-income trap. Each investigates the policy constraints influencing the relative stagnation of the economy and suggests appropriate measures for alleviating them. By integrating theoretical constructs and new evidence, the authoritative contributions diagnose the nature of the current problems and offer practical solutions. They cover important issues such as the crisis of agrarian transition, agrarian markets and distributive justice, employment growth and transition to non-agriculture sectors, fiscal policy, external factors in economic transformation, and perspectives on rejuvenating the state's economy.

The book, on the basis of empirical and historical investigations, convincingly demonstrates that the process of change in India involved a great degree of ambivalence, but there is no clear-cut indication except that various strategies have tended to strengthen the position of the already privileged sections of the society. The underprivileged are the last to benefit.
