White Cargo is the forgotten story of the thousands of Britons who lived and died in bondage in Britain's American colonies. In the seventeenth and eighteenth centuries, more than 300,000 white people were shipped to America as slaves. Urchins were swept up from London's streets to labor in the tobacco fields, where life expectancy was no more than two years. Brothels were raided to provide "breeders" for Virginia. Hopeful migrants were duped into signing as indentured servants, unaware they would become personal property who could be bought, sold, and even gambled away. Transported convicts were paraded for sale like livestock. Drawing on letters crying for help, diaries, and court and government archives, Don Jordan and Michael Walsh demonstrate that the brutalities usually associated with black slavery alone were perpetrated on whites throughout British rule. The trade ended with American independence, but the British still tried to sell convicts in their former colonies, which prompted one of the most audacious plots in Anglo-American history. This is a saga of exploration and cruelty spanning 170 years that has been submerged under the overwhelming memory of black slavery. White Cargo brings the brutal, uncomfortable story to the surface.

"Sarah Gillespie Huftalen led an unconventional life for a rural midwestern woman of her time. Born in 1865 near Manchester, Iowa, she was a farm girl who became a highly regarded country school and college teacher; she married a man older than either of her parents, received a college degree later in life, and was committed to both family and career. A gifted writer, she crafted essays, teacher-training guides, and poetry while continuing to write lengthy, introspective entries in her diary, which spans the years from 1873 to 1952. In addition, she gathered extensive information about the quietly tragic life of her mother, Emily, and worked to preserve Emily's own detailed diary." "In more than 3,500 pages, Sarah writes about her multiple roles as daughter, sister, wife, teacher, family historian, and public figure. Her diary reflects the process by which she was socialized into these roles and her growing consciousness of the ways in which these roles intersected. Not only does her diary embody the diverse strategies used by one woman to chart her life's course and to preserve her life's story for future generations, it also offers ample evidence of the diary as a primary form of private autobiography for individuals whose lives do not lend themselves to traditional definitions of autobiography." "Taken together, Emily's and Sarah's extraordinary diaries span nearly a century and thus form a unique mother/daughter chronicle of daily work and thoughts, interactions with neighbors and friends and colleagues, and the destructive family dynamics that dominated the Gillespies. Sarah's consciousness of the abusive relationship between her mother and father haunts her diary, and this dramatic relationship is duplicated in Sarah's relationship with her brother, Henry. Suzanne Bunkers' skillful editing and analysis of Sarah's diary reveal the legacy of a caring, loving mother reflected in her daughter's work as family member, teacher, and citizen." "The rich entries in Sarah Gillespie Huftalen's diary offer us brilliant insights into the importance of female kinship networks in American life, the valued status of many women as family chronicles, and the fine art of selecting, piecing, stitching, and quilting that characterizes the many shapes of women's autobiographies. Read Sarah's diary to discover why "all will yet be well."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

Astrocytes can be defined as the glia inhabiting the nervous system with the main function in the maintenance of nervous tissue homeostasis. Classified into several types according to their morphological appearance, many of astrocytes form a reticular structure known as astroglial syncytium, owing to their coupling via intercellular channels organized into gap junctions. Not only do astrocytes establish such homocellular contacts, but they also engage in intimate heterocellular interactions with neurons, most notably at synaptic sites. As synaptic structures house the very core of information transfer and processing in the nervous system, astroglial perisynaptic positioning assures that these glial cells can nourish neurons and establish bidirectional communication with them, functions outlined in the concepts of the astrocytic cradle and multi-partite synapse, respectively. Astrocytes possess a rich assortment of ligand receptors, ion and water channels, and ion and ligand transporters, which collectively contribute to astrocytic

control of homeostasis and excitability. Astroglia control glutamate and adenosine homeostasis to exert modulatory actions affecting the real-time operation of synapses. Fluctuations of intracellular calcium can lead to the release of various chemical transmitters from astrocytes through a process termed gliotransmission. Sodium fluctuations are closely associated to those of calcium with both dynamic events interfacing signaling and metabolism. Astrocytes appear fully integrated into the brain cellular circuitry, being an indispensable part of neural networks.
