This practical and engaging book provides a coherent approach to global business responsibility and ethics based on the latest research, theory, and practice. The authors incorporate numerous interesting and current real world examples to support the argument that corporations need to - and can - identify and implement processes that foster ethical conduct, ensure basic human rights, protect the natural environment, and enhance social justice wherever businesses operate around the globe. "Global Business Citizenship" combines elements of political theory, stakeholder relationships, business ethics, corporate social performance, accountability and measurement, and organizational change. Its practical approach encompasses "best practices" in stakeholder management, experiments in applying corporate values to local conditions, and social environmental auditing and reporting. Focusing on the strategic alignment and change management process for implementing business citizenship principles and practices, it is an essential supplement for any course concerned with ethics and social responsibility in today's global business climate.

This book highlights the important need for more efficient and environmentally sound combustion technologies that utilise renewable fuels to be continuously developed and adopted. The central theme here is two-fold: internal combustion engines and fuel solutions for combustion systems. Internal combustion engines remain as the main propulsion system used for ground transportation, and the number of successful developments achieved in recent years is as varied as the new design concepts introduced. It is therefore timely that key advances in engine technologies are organised appropriately so that the fundamental processes, applications, insights and identification of future development can be consolidated. In the future and across the developed and emerging markets of the world, the range of fuels used will significantly increase as biofuels, new fossil fuel feedstock and processing methods, as well as variations in fuel standards continue to influence all combustion technologies used now and in coming streams. This presents a challenge requiring better understanding of how the fuel mix influences the combustion processes in various systems. The book allows extremes of the theme to be covered in a simple yet progressive way.

“I want to be intelligent, even if I do live in Boston.” —an anonymous Bostonian, 1929 In this spectacular romp through the Puritan City, Neil Miller relates the scintillating story

of how a powerful band of Brahmin moral crusaders helped make Boston the most straitlaced city in America, forever linked with the infamous catchphrase “Banned in Boston.” Bankrolled by society’s upper crust, the New England Watch and Ward Society acted as a quasi-vigilante police force and notorious literary censor for over eighty years. Often going over the heads of local authorities, it orchestrated the mass censorship of books and plays, raided gambling dens and brothels, and utilized spies to entrap prostitutes and their patrons. Miller deftly traces the growth of the Watch and Ward, from its formation in 1878 to its waning days in the 1950s. During its heyday, the society and its imitators banished modern classics by Hemingway, Faulkner, and Sinclair Lewis and went to war with publishing and literary giants such as Alfred A. Knopf and *The Atlantic Monthly*. To the chagrin of the Watch and Ward, some writers rode the national wave of publicity that accompanied the banning of their books. Upton Sinclair declared staunchly, “I would rather be banned in Boston than read anywhere else because when you are banned in Boston, you are read everywhere else.” Others faced extinction or tried to barter their way onto bookshelves, like Walt Whitman, who hesitantly removed lines from *Leaves of Grass* under the watchful eye of the Watch and Ward. As the Great Depression unfolded, the society shifted its focus from bookstores to burlesque, successfully shuttering the Old Howard, the city’s legendary theater that attracted patrons from T. S. Eliot to John F. Kennedy. *Banned in Boston* is a lively history and, despite Boston’s “liberal” reputation today, a cautionary tale of the

The year 2008 is a memorial year for Georgiy Vorono (1868-1908), with a number of events in the scientific community commemorating his tremendous contribution to the area of mathematics, especially number theory, through conferences and scientific gatherings in his honor. A notable event taking place in September 2008 a joint conference: the 5th Annual International Symposium on Voronoi Diagrams (ISVD) and the 4th International Conference on Analytic Number Theory and Spatial Tessellations held in Kyiv, Georgiy Vorono 's native land. The main ideas expressed by G. Vorono 's through his fundamental works have influenced and shaped the key developments in computation geometry, image recognition, artificial intelligence, robotics, computational science, navigation and obstacle avoidance, geographical information systems, molecular modeling, astrology, physics, quantum computing, chemical engineering, material sciences, terrain modeling, biometrics and other domains. This book is intended to provide the reader with in-depth overview and analysis of the fundamental methods and techniques developed following G. Voronoi ideas, in the context of

the vast and increasingly growing area of computational intelligence. It represents the collection of state-of-the art research methods merging the bridges between two areas: geometric computing through Voronoi diagrams and intelligent computation techniques, pushing the limits of current knowledge in the area, improving on previous solutions, merging sciences together, and inventing new ways of approaching difficult applied problems.

The two volumes of this Volkswagen Repair Manual present the service and repair information for Volkswagen Passat and Passat wagon models sold in the US and Canada. For the professional automotive technician, this manual includes useful specifications and procedures.

The approach of this book is to demonstrate how theoretical aspects, drawn from topics on airplane aerodynamics, aircraft structures, stability and control, propulsion, and compressible flows, can be applied to produce a new conceptual aircraft design. The book cites theoretical expressions wherever possible, but also stresses the interplay of different aspects of the design which often require compromises. **KEY TOPICS:** Coverage includes the conceptual design of an aircraft; iterative and repetitive calculations, and the different degrees of dependence of the aircraft characteristics on changing input conditions. **MARKET:** For professionals in the Aerospace Engineering field.

A New York Review Books Original Hav is like no place on earth. Rumored to be the site of Troy, captured during the crusades and recaptured by Saladin, visited by Tolstoy, Hitler, Grace Kelly, and Princess Diana, this Mediterranean city-state is home to several architectural marvels and an annual rooftop race that is a feat of athleticism and insanity. As Jan Morris guides us through the corridors and quarters of Hav, we hear the mingling of Italian, Russian, and Arabic in its markets, delight in its famous snow raspberries, and meet the denizens of its casinos and cafés. When Morris published *Last Letters from Hav* in 1985, it was short-listed for the Booker Prize. Here it is joined by *Hav of the Myrmidons*, a sequel that brings the story up-to-date. Twenty-first-century Hav is nearly unrecognizable. Sanitized and monetized, it is ruled by a group of fanatics who have rewritten its history to reflect their own blinkered view of the past. Morris's only novel is dazzlingly sui-generis, part erudite travel memoir, part speculative fiction, part cautionary political tale. It transports the reader to an extraordinary place that never was, but could well be.
