Retells, in graphic novel format, Mary Shelley's classic tale of a monster, assembled by a scientist from parts of dead bodies, who develops a mind of his own as he learns to loathe himself and hate his creator.

There is no greater intimacy than "Intimacy with God". Establishing an intimate relationship with God is one of the best relationships you could ever have. I was taught this by my late Grandmother, and have since established my own personal intimate relationship with God. However, it wasn't until I reached the mature age of 30 that I realized what intimacy with God truly was. It was during many trials and tribulations of my life that caused me to seek God with my whole heart and surrender my life to Him. Before I truly established intimacy with God, I had drifted so far from Him and was living a life that was displeasing to Him. One day when I was at my lowest, I began to reflect on the things that my Grandmother had instilled in me at a very early age. I found myself on my knees crying out to God for His help. I found a church home and started attending Bible study, reading the Bible for myself, and meditating on the Word of God, and obeying His Word. The Bible tells us in Proverbs 22:6, "Train up a child in the way he should go, and when he is old, he will not depart from it". In this her first book, Tonya Raby shares her personal testimony and some of her life's experiences while on her journey of establishing "Intimacy with God". She shares scriptures from what she calls her personal toolbox (the Bible) to better help you understand how you too can establish an "Intimate Relationship with God".

This volume--the first to bring together research on sociocultural aspects of mathematics education--presents contemporary and international perspectives on social justice and equity issues that impact mathematics education. In particular, it highlights the importance of three interacting and powerful factors--gender, social, and cultural dimensions. Sociocultural Research on Mathematics Education: An International Perspective is distinguished in several ways: * It is research based. Chapters report on significant research projects; present a comprehensive and critical summary of the research findings; and offer a critical discussion of research methods and theoretical perspectives undertaken in the area. * It is future oriented, presenting recommendations for practice and policy and identifying areas for further research. * It deals with all aspects of formal and informal mathematics education and applications and all levels of formal schooling. As the context of mathematics education rapidly changes-- with an increased demand for mathematically literate citizenship; an increased awareness of issues of equity, inclusivity, and accountability; and increased efforts for globalization of curriculum development and research-- questions are being raised more than ever before about the problems of teaching and learning mathematics from a non-cognitive science perspective. This book contributes significantly to addressing such issues and answering such questions. It is especially relevant for researchers, graduate students, and policymakers in the field of mathematics education.

Frankenstein or 'The Modern Prometheus': The 1818 Text Oxford University Press

Valperga, published in 1823, the year after Percy Bysshe Shelley's death is a romance of the 14th century in Italy, during the height of the struggle between the Guelphs and the Ghibellines, when each state and almost each town was at war with the other ; a condition of things which lends itself to romance. Mary Shelley's intimate acquaintance with Italy and Italians gives her the necessary knowledge to write on this subject. Her zealous Italian studies came to her aid, and her love of nature give life and vitality to the scene. Valperga, the ancestral castle home of Euthanasia, a Florentine lady of the Guelph faction, is most picturesquely described, on its ledge of projecting rock, overlooking the plain of Lucca; the dependent peasants around happy under the protection of their good Signora. That this beautiful and high-minded lady should be affianced to a Ghibelline leader is a natural combination ; but when her lover Castruccio, prince of Lucca, carries his political enthusiasm the length of making war on her native city of Florence, whose Republican greatness and love of art are happily described, Euthanasia cannot let love stand in the way of duty and gratitude to all those dearest to her ...

More than 200 years after it was first published, Mary Shelley's Frankenstein has stood the test of time as a gothic masterpiece--a classic work of horror that blurs the line between man and monster. "If I cannot inspire love, I will cause fear." For centuries, the story of Victor Frankenstein and the monster he created has held readers spellbound. On the surface, it is a novel of tense and steadily mounting dread. On a more profound level, it illuminates the triumph and tragedy of the human condition in its portrayal of a scientist who oversteps the bounds of conscience, and of a creature tortured by the solitude of a world in which he does not belong. A novel of almost hallucinatory intensity, Mary

Shelley's Frankenstein represents one of the most striking flowerings of the Romantic imagination.

The original 1818 text of Mary Shelley's classic novel, with annotations and essays highlighting its scientific, ethical, and cautionary aspects. Mary Shelley's Frankenstein has endured in the popular imagination for two hundred years. Begun as a ghost story by an intellectually and socially precocious eighteen-year-old author during a cold and rainy summer on the shores of Lake Geneva, the dramatic tale of Victor Frankenstein and his stitched-together creature can be read as the ultimate parable of scientific hubris. Victor, "the modern Prometheus," tried to do what he perhaps should have left to Nature: create life. Although the novel is most often discussed in literary-historical terms—as a seminal example of romanticism or as a groundbreaking early work of science fiction—Mary Shelley was keenly aware of contemporary scientific developments and incorporated them into her story. In our era of synthetic biology, artificial intelligence, robotics, and climate engineering, this edition of Frankenstein will resonate forcefully for readers with a background or interest in science and engineering, and anyone intrigued by the fundamental questions of creativity and responsibility. This edition of Frankenstein pairs the original 1818 version of the manuscript—meticulously line-edited and amended by Charles E. Robinson, one of the world's preeminent authorities on the text—with annotations and essays by leading scholars exploring the social and ethical aspects of scientific creativity raised by this remarkable story. The result is a unique and accessible edition of one of the most thought-provoking and influential novels ever written. Essays by Elizabeth Bear, Cory Doctorow, Heather E. Douglas, Josephine Johnston, Kate MacCord, Jane Maienschein, Anne K. Mellor, Alfred Nordmann

Dr. William H. Bates discovered Natural Eyesight Improvement, 'The Bates Method'. His Experiments prove that tension in the outer eye muscles (oblique and Recti) disrupt, change the shape of the eye and focus of light rays in the eye resulting in; unclear close and distant vision, astigmatism, crossed, wandering eyes, cataract, glaucoma and other abnormal eye conditions. He proved that the outer eye muscles, (oblique) when relaxed, contracting, un-contracting normally change the shape of the eye to normal to produce clear close and distant vision. Relaxed ciliary, iris, tear gland and other inner, outer eye muscles also function correct, produce clear vision, healthy eyes. Mental, emotional strain, tension, using the eyes incorrect is the main cause of outer eye muscle, eye tension and unclear vision. Dr. Bates proved that relaxation of the mind, body, outer eye muscles results in a return of the eye to normal shape with correct focus of light rays in the eyes, on the retina with clear vision at all distances, removal of astigmatism and other eye problems, keeps the eyes healthy with normal circulation, eye pressure, correct function of the optic and other eye, visual system nerves. Abnormal pressure, tension, pulling on/in the eye, lens, retina is removed. The eye muscles; outer (oblique, recti & muscles for blinking, tears...) and inner (ciliary, iris... muscles near and attached to the lens) function correct producing perfect; convergence, accommodation for clear close and reading vision, divergence, un-accommodation for clear distant vision. Shifting 'eye movement' with Central-Fixation (central vision) and function of the retina, lens, brain, entire visual system are perfect. A few of Dr. Bates older articles were based on the beliefs of most Ophthalmologists. As Dr. Bates cured his own vision naturally, treated his patients, performed experiments on the eyes, eye muscles, nerves-he changed his view on accommodation and other eye functions. He then practiced, applied natural eye, vision treatments without the use of eyeglasses, surgery, drugs. This is the origin of Natural Eyesight Improvement. Dr. Bates recorded all his natural treatments, work in his Clinic in New York City, U.S.A. and other hospitals, locations during his lifetime in his book 'The Cure Of Imperfect Sight By Treatment Without Glasses' & 11 years, 132 Issues of his Monthly Better Eyesight Magazine. Eyeglasses are often prescribed unnecessarily or 'too strong' (over-corrected) due to temporary nervousness, pressure to hurry, limited, incorrect eye, head, neck, body movement during an eye exam. Eye doctors also prefer to prescribe an 'extra stronger strength' to the eyeglass lenses. All eyeglasses, especially strong eyeglass lenses, bifocals, astigmatism lenses, sunglasses cause fast, increased vision impairment and prescriptions for stronger eyeglass lenses. This leads to increased vision impairment, cataracts and other eye health, vision impairment. There are a lot of smart scientists working on ways to improve our species. Some are working within medical communities, trying to cure cancers and prevent inheritable diseases. Others are working in academic environments, doing research on how to make us smarter, live longer, or be better adapted for space travel. Still others are hacking away in secretive government labs far from the public eye. Right in plain sight are hundreds of community biolabs operating all around the world. Where will all these changes take us? Some may think or hope that the scientific elite in Boston or London will be making hard choices on behalf of the planet. But the future of Homo sapiens will be determined by billions of individuals whose reproductive and medical choices may already be altering our species more than any policy recommendations ever could. What is it we are becoming? Or to get to the heart of this book, what is it that we want Homo sapiens to become? We've been asking smart people wherever we go who are thinking about these topics. Scientists, of course. But also sociologists, anthropologists, bioethicists, visual artists, and Buddhist monks. The result is *Neo.Life: 25 Visions for the Future of Our Species*.

This monograph addresses the phenomenon of mass harm and how it may be resolved through collective redress. It examines particularly how such redress may be achieved through mechanisms such as multi-party actions (MPAs). In order to do this, an analytical framework is created against which to evaluate various multi-party procedures. This is illustrated through the experience of a selection of common law jurisdictions in dealing with mass harm – namely that of England and Wales, Canada, Australia and the United States, as well as that of EU collective redress. It examines multi-party action laws benchmarked against the objectives identified in the analytical framework. The phenomenon of environmental mass harm in particular is explored as a case study, as it illustrates some of the difficulties that may arise in mass harm litigation. Also, this work explores where the best solutions for mass harm redress may lie in the future – perhaps in collective actions or through alternatives such as regulation and alternative dispute resolution or a combination of these. Finally, the experience of mass harm litigation in Ireland is examined, as currently this
