1876-1891 include reports on the internal commerce of the United States, referred to in letters of transmittal as "the volume on commerce and navigation."

"This volume contains the research papers which have been commissioned by the Research Advisory Group on Trade Policy (Economics) on the issues surrounding a possible Canada-U.S. free trade agreement. The papers are of three types: commissioned research studies, staff papers which summarize the proceedings of three research symposia, and a selection of the papers presented at these symposia. At each symposium, participants were invited to present short papers based on their existing work relevant to the issues being discussed. Many of these proved to be extremely helpful both to the Commission staff and to Commissioners in drawing together the thinking of the wider research community on issues surrounding Canada-U.S. free trade. Therefore, slightly longer and revised versions of some of these have been included here to help focus the debate which we expect will follow publication of the Commission's report and research output."--Page 1.

Darwin's greatest accomplishment was to show how life might be explained as the result of natural selection. But does Darwin's theory mean that life was unintended? William A. Dembski argues that it does not. In this book Dembski extends his theory of intelligent design. Building on his earlier work in *The Design Inference* (Cambridge, 1998), he defends that life must be the product of intelligent design. Critics of Dembski's work have argued that evolutionary algorithms show that life can be explained apart from intelligence. But by employing powerful recent results from the No Free Lunch Theory, Dembski addresses and decisively refutes such claims. As the leading proponent of intelligent design, Dembski reveals a designer capable of originating the complexity and specificity found throughout the cosmos. Scientists and theologians alike will find this book of interest as it brings the question of creation firmly into the realm of scientific debate.

This book takes a learner-oriented approach as it strives to make complex material understandable and usable. By understanding the underlying principles of measurement and evaluation, readers will then be able to apply those principles and concepts in a variety of physical activity and health-related settings. Practical exercises and applications demonstrate the usefulness of measurement and evaluation, reinforce key points, and make readers active participants in their own education. The book is divided into three parts. Part One introduces the measurement process, showing readers the relevance of measurement and evaluation to their personal and professional lives, and including examples and statistics related to such concepts as validity, reliability, and objectivity. The two chapters in Part Two further help readers understand numbers and assist those who need to use more advanced statistical calculations. Part Three presents measurement and evaluation applications in various settings, such as measuring physical fitness; measuring exercise, physical activity, and health; measuring in competitive sports and coaching; measuring and evaluating knowledge and assigning grades; and measuring in research. Throughout, discussions and examples show the relevance and application of measurement and evaluation in various professions, including physical therapy, athletic training, fitness/wellness management, exercise and sport psychology, exercise science, coaching, and physical education.
