Photographers are always looking for perfect light. Unfortunately, the quality of available light, and the situations in which photos are created, are rarely perfect. This is especially true when photographing weddings or portraits on location. So while finding beautiful existing light is every photographer's ideal, it isn't always possible. This is the point at which photographers tend to reach for a portable, on-camera flash. Indeed, these intense light sources can prove invaluable, but only if you know how to use them effectively. In the hands of an inexperienced photographer, on-camera flash will produce images that look flat and lifeless—images with harsh shadows, washed-out skin tones, cavernous black backgrounds, and other unappealing visual characteristics. In this book, acclaimed wedding and portrait photographer Neil van Niekerk shows you how to avoid the pitfalls photographers new to speedlights often encounter so that you can produce professional images using on-camera flash. You'll learn to use simple accessories to manipulate the quality of light from your flash and how to improve a lighting scenario by enhancing rather than overwhelming the existing light. When the available light is too low and too uneven to be combined with flash, he shows you how to override it completely with flash and, with some thought and careful application of specialized techniques, still get results that look great. On-camera flash is one of the most challenging light sources to master, but with the techniques in this book you'll learn to use it with confidence. For wedding and environmental portrait photographers who must work in ever-changing lighting scenarios, this can mean better images and better sales.

Kennedy just over eight years earlier. It also raised the question 'What do you do next, after landing on the Moon?' It fell to President Richard M. Nixon to answer this question. After Apollo? Richard Nixon and the American Space Program traces in detail how Nixon and his associates went about developing their response.

'WHO ARE YOU?'—Monsieur Pierre (the immigration official) poses his usual question, but Heinrich's unusual answer sets in motion a metaphysical rollercoaster. Why would a simple statement of name and profession bring so much attention to an unassuming clockmaker? Maybe because that's two more things than anyone else in this place remembers! Soon, Heinrich is reminding his new friend Frieda of memories she's forgotten and even summoning up a few of his own of forbidden love, and crimes he may or may not have committed. Is it possible to be guilty of being about to commit a crime, as Monsieur Pierre suspects? And why wouldn't one recall something so significant as premeditated murder? Armed with a newfound-yet-familiar love for each other, Heinrich and Frieda set about solving this Kafkaesque puzzle. Over 80 species of birds common to Ontario are featured in this easy-to-use introductory field guide. Colour illustrations and extensive natural history are featured in each two-page account.

These will include a chapter of step-by-step examples that highlight the compositional technique used to get just the right shot; a new chapter on black-and-white photography; and a chapter on what to do after the shot—enhancing and editing the images in post-processing. The authors examine relationships within the Chrysoxena group of the tortricid tribe Euliini. They define 54 species among six genera: Chrysoxena Meyrick; Vulpoxena Brown, new genus; Thoridia Brown, new genus; Dorithia Powell; Cuproxena Powell and Brown, new genus; and Bidorpitia Brown, new genus. Using cladistic methods, the authors develop a phylogenetic hypothesis for the genera and species groups of Dorithia and Cuproxena. A systematic treatment of the included species provides appropriate generic assignment for several previously misplaced species and describes many taxa as new.
