

Free John Persons The Neighbors Miguel Trevino

Molly has now graduated high school and is about to start college but she has that summer in between, the best time to let go and get wild! She gets to play in her very own Manhattan apartment for the summer every which way. Her and her buxom naughty pal get it on with plenty of hot dudes and girls, including debauching an Asian girl, and using some unbelievably huge toys to stretch all openings to the limit!

Cassandra Khaw returns with *A Song for Quiet*, a new standalone *Persons Non Grata* novella from the world of *Hammers on Bone*, finalist for the British Fantasy Award and the Locus Award, and which Kameron Hurley called "a long leap into the gory, the weird, and the fantastic." Deacon James is a rambling bluesman straight from Georgia, a black man with troubles that he can't escape, and music that won't let him go. On a train to Arkham, he meets trouble — visions of nightmares, gaping mouths and grasping tendrils, and a madman who calls himself John Persons. According to the stranger, Deacon is carrying a seed in his head, a thing that will destroy the world if he lets it hatch. The mad ravings chase Deacon to his next gig. His saxophone doesn't call up his audience from their seats, it calls up monstrosities from across dimensions. As Deacon flees, chased by horrors and cultists, he stumbles upon a runaway girl, who is trying to escape the destiny awaiting her. Like Deacon, she carries something deep inside her, something twisted and dangerous. Together, they seek to leave Arkham, only to find the Thousand Young lurking in the woods. The song in Deacon's head is growing stronger, and soon he won't be able to ignore it any more. Maness asks us to "tie up our sneakers, for we are going to have some fun as we hike into the Grand Canyon of Love. Love is the treasure of life. It is Love all the way. Nothing else really matters outside of Love. Best of all, our Love will only get better in heaven." The treasured ability to have loving relationships is God's gift to us in our *Imago Dei*—the image of God we all share. Likewise, what we know of Love this side of heaven is but a dusty image of what God experiences. "I want to get personally involved," says Maness. "Can we have a free-will relationship with anyone, even God, if all of what we do and think is settled? I don't think so. Love is greater than that, and I shall prove that, and that is indeed a Grand Canyon." Manes brings some of the brain-splitting complexities of this to light with good humor, introduces dynamic foreknowledge, and challenges Classical Theism's avoidance of Love. And he exposes some foul play in the process. That's the first half of the book. For those wanting to strike out on their own (wanting to see more of the depth and diversity of the Grand Canyon), the second half contains reviews of about 60 major authors, a 4,000+ *Abysmal Bibliography*, and a huge index to just about everything in the book. Maness has thrown a gauntlet before the Classical

Theists. So ... tie up your sneakers and take a hike with Michael G. Maness as he walks with you into the Grand Canyon. see more at www.PreciousHeart.net

Cassandra Khaw bursts onto the scene with *Hammers on Bone*, a hard-boiled horror show that Charles Stross calls "possibly the most promising horror debut of 2016." A finalist for the British Fantasy award and the Locus Award for Best Novella! John Persons is a private investigator with a distasteful job from an unlikely client. He's been hired by a ten-year-old to kill the kid's stepdad, McKinsey. The man in question is abusive, abrasive, and abominable. He's also a monster, which makes Persons the perfect thing to hunt him. Over the course of his ancient, arcane existence, he's hunted gods and demons, and broken them in his teeth. As Persons investigates the horrible McKinsey, he realizes that he carries something far darker. He's infected with an alien presence, and he's spreading that monstrosity far and wide. Luckily Persons is no stranger to the occult, being an ancient and magical intelligence himself. The question is whether the private dick can take down the abusive stepdad without releasing the holds on his own horrifying potential. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Dr Howell examines Kibworth Harcourt between the later Middle Ages and the early modern period where English rural society changes.

A renowned author and rabbi discusses the relationship between science and religion and the importance of the coexistence of both in that religion is the search for meaning and science is the search for explanation. 20,000 first printing.

The second and final volume of inquisitions for the reign of Henry V.

"The travel book of the season."—Craig Seligman, *New York Times Book Review* The first book to distill Jan Morris's entire body of work into one volume, *The World* is a magnum opus by the most-celebrated travel writer in the world. To read it is to take an epic armchair journey through the last half of twentieth-century history. A breathtakingly vivid guide to our greatest cosmopolitan cities and cultures from Manhattan to Venice and from Baghdad to Barbados, this book assembles fifty years of Morris's finest travel writing. With eyewitness accounts of such seminal moments as the first successful ascent of Everest, the Eichmann trial, the fall of the Berlin Wall, and the handover of Hong Kong, *The World* promises to create an entirely new generation of Jan Morris readers. A *San Francisco Chronicle* Best Book of 2003.

This provocative book refurbishes the traditional account of freedom of will as reasons-guided "agent" causation, situating its account within a general metaphysics. O'Connor's discussion of the general concept of causation and of ontological reductionism v. emergence will specially interest metaphysicians and philosophers of mind.

Instant answers to common medical questions are covered in 100 condition-specific essays. Also includes lists of associations, agencies, clinics and treatment centers.

In this book the author proposes a three-way conversation between theology, science, and pastoral ministry. His approach draws on a Trinitarian understanding of God as a relational being of love, whose life spills over into all created reality, human and nonhuman. By locating human meaning and purpose within God's creation-community this book offers the possibility of a transforming engagement between those in pastoral ministry and the scientific community. Title first published in 2003. John Macquarrie has been a major contributor in the theological world for more than forty years, but as yet very little secondary material on his work has appeared. This book offers an insightful introduction to Macquarrie's theology, arguing that at its heart is a systematic theology of gift. Tracing the development of his thought from its early existentialism to the social and world-affirming perspectives of later writings, this book shows how these developments emerge in dialogue with contemporary thinkers. Morley demonstrates how Macquarrie's theology mediates between two traditionally opposing theologies of gift and being, centring on the doctrines of God and of human being, and reaching its fullest expression in Christology, with Christ as the focal point of two personal movements of self-giving - divine and human. Macquarrie himself contributes a Foreword.

Neuroethics is a theoretical and practical discipline that considers the many ethical issues that arise in neuroscience. From its inception, the field has sought to develop an ethical vision from within the confines of science, a task that is both misguided and, in the end, impossible. Providing a solid theoretical foundation for neuroethics means looking to other sources, most specifically to philosophy. In this groundbreaking work, the author examines the current underpinnings of neuroethical thinking and finds them inadequate to the task of neuroethics – to think ethically about persons, technology and society. Grounded in the physicalist and deterministic presuppositions of contemporary science, and drawing on utilitarian thought, neuroethics as currently conceived lacks the ability to develop a robust and adequate notion of persons and of ethics. Philosophical Neuroethics examines the historical reasons for this state of affairs, for the purpose of proposing a more viable alternative – drawing on the tradition of personalism for a more adequate metaphysical, epistemological, anthropological and ethical vision of the human person and of ethics that can serve as a solid foundation for the theory and practice of neuroethical decision making as it touches on the neurologic and psychiatric care of individuals, our philosophy of technology and the social implications of neuroscience that touch on public policy, neurotechnology, the justice system and the military. Drawing on the personalist philosophical tradition that emerged in the twentieth century in the works of Mounier, Maritain, Guardini, Wojtyla, and the Modern Ontological Personalism of Juan Manuel Burgos, Philosophical Neuroethics brings to light the limitations of contemporary neuroethical thinking and sets forth a comprehensive vision of the human person capable of interacting with the contemporary questions raised by neuroscience and technology.
