To celebrate the 50th anniversary of *Howl and Other Poems*, with nearly one million copies in print, City Lights presents the story of editing, publishing and defending Allen Ginsberg's landmark poem within a broader context of obscenity issues and censorship of literary works. This collection begins with an introduction by publisher Lawrence Ferlinghetti, who shares his memories of hearing *Howl* first read at the 6 Gallery, of his arrest and of the subsequent legal defense of *Howl*'s publication. Never-before-published correspondence of Ginsberg, Ferlinghetti, Kerouac, Gregory Corso, John Hollander, Richard Eberhart and others provides an in-depth commentary on the poem's ethical intent and its social significance to the author and his contemporaries. A section on the public reaction to the trial includes newspaper reportage, op-ed pieces by Ginsberg and Ferlinghetti and letters to the editor from the public, which provide fascinating background material on the cultural climate of the mid-1950s. A timeline of literary censorship in the United States places this battle for free expression in a historical context. Also included are photographs, transcripts of relevant trial testimony, Judge Clayton Horn's decision and its ramifications and a long essay by Albert Bendich, the ACLU attorney who defended *Howl* on constitutional grounds. Editor Bill Morgan discusses more recent challenges to *Howl* in the late 1980s and how the fight against censorship continues today in new guises.

GSM, GPRS and EDGE Performance - Second Edition provides a complete overview of the entire GSM system. GSM (Global System for Mobile Communications) is the digital transmission technique widely adopted in Europe and supported in North America. It features comprehensive descriptions of GSM's main evolutionary milestones - GPRS, (General Packet Radio Services) is a packet-based wireless communication service that promises data rates from 56 up to 114 Kbps and continuous connection to the Internet for mobile phone and computer users. AMR and EDGE (Enhanced Data GSM Environment), and such developments have now positioned GERAN (GSM/EDGE Radio Access Network) as a full 3G radio standard. The radio network performance and capabilities of GSM, GPRS, AMR and EDGE solutions are studied in-depth by using revealing simulations and field trials. Cellular operators must now roll out new 3G technologies capable of delivering wireless Internet based multimedia services in a competitive and cost-effective way and this volume, divided into three parts, helps to explain how: 1. Provides an introduction to the complete evolution of GSM towards a radio access network that efficiently supports UMTS services (GERAN). 2. Features a comprehensive study of system performance with simulations and field trials. Covers all the major features such as basic GSM, GPRS, EDGE and AMR and the full capability of the GERAN radio interface for 3G service support is envisaged. 3. Discusses different 3G radio technologies and the position of GERAN within such technologies. Featuring fully revised and updated chapters throughout, the second edition contains 90 pages of new material and features the following new sections, enabling this reference to remain as a leading text in the area: Expanded material on GPRS Includes IMS architecture (Rel'5) and GERAN (Rel'6) features Presents field trial results for AMR and narrowband Provides EGPRS deployment guidelines Features a new chapter on Service Performance An invaluable reference for Engineering Professionals, Research and Development Engineers, Business Development Managers, Technical Managers and Technical Specialists working for cellular operators

This third edition contains around 25% new and reworked material and has been thoroughly updated to encompass recent advances and future trends. It serves as both an introductory textbook for graduate students as well as a reference resource for telecommunications engineers and researchers. This edition: Presents capacity enhancement methods like sectorization, the application of adaptive antennas for Spatial Filtering for Interference Reduction (SFIR) and Space Division Multiple Access (SDMA) Provides a detailed introduction to GPRS, HSCSD, and EDGE for packet-switched services and higher data rates Features updated coverage on the vastly expanded range of GSM services, including an examination of Multimedia Messaging Service (MMS) Adopts a highly graphical approach with numerous illustrations

Offering a detailed look at all the technical aspects and underpinnings of A-GPS, this unique book places emphasis on practical implementation. The book reviews standard GPS design, helping you understand why GPS requires assistance in the first place. You discover how A-GPS enables the computing of a position from navigation satellites in the absence of precise time - a topic not covered in any other book. Moreover, you learn how to design and analyze a high sensitivity GPS receiver and determine the achievable sensitivity. The book provides detailed worksheets that show how to compute, analyze, and improve the processing gain from the input signal at the antenna to the signal after the correlators. These worksheets are used in the book to generate families of curves that completely characterize receiver sensitivity, parameterized in terms of front end noise figure, coherent and noncoherent integration times. From this work a law of achievable sensitivity is derived and explained in the book.

This detailed volume surveys the history of Macedonia from 600 BC to the present day, with an emphasis on the past two centuries. It reveals how the so-called Macedonian question has long dominated Balkan politics, and how for well over a

century and a half, it was the central issue dividing Balkan peoples, as neighboring Bulgaria, Greece, and Serbia struggled for possession of Macedonia—and denied any distinct Macedonian identity.

This book is the essential revision guide for neurology in the Membership of the Royal College of Physicians (MRCP). Is there an 'Albanian question'? If so, what is it? Is it a traditional 'national question', centred on the dream of a 'Greater Albania' that would gather in all the Albanian communities in the Balkans? Many outside observers, in particular among the Albanians' neighbours in the Balkans, see it that way and fear its destabilising consequences, but none of the contributors to this Chaillot Paper finds this scenario convincing. The core of the Albanian national question today is Kosovo, an issue that has the power to unite Albanians in the Balkans and in the sizeable diaspora communities spread across the globe. While the answer - for Albanians - is independence for Kosovo, beyond that, views diverge. It seems that only a minority of Albanians remain committed to the project of Pan-Albanian political unification. Most Albanians are fully aware of the diversity of interests of the various Albanian communities in the Balkans, who have lived in different states over the past century. The end of communism made it much easier for Albanians to keep in contact with each other, but this did not lead to greater national cohesion. The dramatic 'high politics' of the Kosovo issue tends to obscure the fact that for most Albanians, the most urgent questions today are not 'national' ones at all, but questions of economic underdevelopment, unemployment, the quality of democratic governance, political corruption and criminality, and the emigration of large numbers of the brightest and best of the younger generation. None of these challenges is unique to the Albanians, but they possess a particular asset in their young diaspora in the West, closely linked via the internet with young democracy activists in the Albanians' Balkans homelands. This new generation of Albanians aims to leap out of the isolation and introversion of traditional village and clan-based politics to form a new 'post-modern' transnational political community, committed to building democracy within their states and across them.

"My fellow Americans, I'm pleased to tell you today that I've signed legislation that will outlaw Russia forever. We begin bombing in five minutes.†? – Ronald Reagan, 1984. With these words, spoken as a sound check to a radio broadcast, President Reagan came dangerously close to igniting the long-simmering Cold War. Although Soviet forces were placed on alert following reports of this comment, the full-scale conflict between the West and the Soviet Bloc did not break out. Global Mobile Satellite Systems - A Systems Overview makes mobile satellite communications understandable for communication engineers, candidates for an engineering degree, technicians, managers, and other decision makers such as financiers and regulators. It provides a systems oriented top-level view of mobile satellite communications. In particular, it focuses on Global Mobile Satellite Systems (GMSS) including active programs such as Globalstar, IRIDIUM, ORBCOMM, ACeS, and Thuraya, or so-called the second generation mobile satellite systems class. The authors start with a brief description of three generations of satellite systems in use or planned in the telecommunications industry. Selected systems architectural trades are identified and explained to illustrate how various GMSS systems are formulated, developed and evaluated. It includes an examination of market demand trends, business trades, regulatory issues as well as technical considerations. Major issues are examined in trade study style to provide easy access to key information. Key systems drivers such as orbit trades between LEO's, MEO's, and GEO's, frequency, protocols, customer bases, and regulatory and engineering issues are included. This book should appeal to individuals interested in the basic elements of Global Mobile Satellite Systems.

Most high-temperature geothermal resources develop in volcanic regions, but very few have been successfully explored and developed despite the ever-growing need for renewable energy resources. This is particularly true of the many developing countries that exist in volcanic regions with potential geothermal resources. Because exploration techniques, which must be adapted from the oil industry, are expensive and uncertain, economic growth in these countries remains contingent on the availability and cost of oil. Bridging the gap between academic geologists and drilling engineers, *Volcanology and Geothermal Energy* is a practical and thorough guide to planning and operating a successful exploration project. It describes the potential geothermal reservoirs associated with volcanoes and volcanic regions and uses recent advances in volcanology to offer many examples of how geological field data give evidence of the location, nature, and size of a geothermal resource. Maintaining the seed of God . . . His Word. Am I bleeding to death right in the house of God? Is my seed "stillborn" (no more Word in me)? Have I been seduced and allowed Satan to induce (take my seed) before God has finished with me? Am I "failing to thrive" and have not reached spiritual maturity yet? Am I a "careless carrier" of His Word (His seed in me). If any of these questions concern you, then it is God's will to forgive you and heal you. I want you to know that it is crucial to maintain His word . . . it is your bloodline to eternal life. Do not abort his word . . . Do not abort the ministry, assignment, nor your mandate. God has not been dethroned. Do not let human error, sin, frustrations, trials, or disappointments cause you to expel His seed before He has completed His work in you . . . Maintain his seed . . . His Word is your life. Joyce G. Cherry, B.Th., M.Div., D.Min., is the Founder and Senior Pastor of Greater Beulah Land International Fellowship in Conway, North Carolina. In the early 90s, Somalia was a country in chaos. As civil war raged, warlords carved out their own territories, enforcing their will through militia gangs, while famine compounded the situation. As a joint US-UN mission struggled to maintain order, the warlords began to unite behind Mohamed Farrah Aidid, who was to proclaim himself President of Somalia and embark upon a campaign to force the peacekeepers out of the country. Operations against Aidid and his strongholds intensified, culminating in the famous Operation Gothic Serpent, and the rescue mission to save a downed Black Hawk helicopter carried out by US Rangers and Delta Force operatives. *Day of the Rangers*, the latest companion for Force on Force, provides wargamers with all the background, orders of battle, and scenarios they need to immerse themselves in the epic battle for Mogadishu.
