To celebrate the 50th anniversary of Howl and Other Poems, with nearly one million copies in print, City Lights presents the story of editing, publishing and defending Allen Ginsberg's landmark poem within a broader context of obscenity issues and censorship of literary works. This collection begins with an introduction by publisher Lawrence Ferlinghetti, who shares his memories of hearing Howl first read at the 6 Gallery, of his arrest and of the subsequent legal defense of Howl's publication. Never-before-published correspondence of Ginsberg, Ferlinghetti, Kerouac, Gregory Corso, John Hollander, Richard Eberhart and others provides an in-depth commentary on the poem's ethical intent and its social significance to the author and his contemporaries. A section on the public reaction to the trial includes newspaper reportage, op-ed pieces by Ginsberg and Ferlinghetti and letters to the editor from the public, which provide fascinating background material on the cultural climate of the mid-1950s. A timeline of literary censorship in the United States places this battle for free expression in a historical context. Also included are photographs, transcripts of relevant trial testimony, Judge Clayton Horn's decision and its ramifications and a long essay by Albert Bendich, the ACLU attorney who defended Howl on constitutional grounds. Editor Bill Morgan discusses more recent challenges to Howl in the late 1980s and how the fight against censorship continues today in new guises.

'The school where I first met Cora Ravenwing was called Okington School, and I was just beginning to have real ideas and opinions of my own when I first went there...' With Cora Ravenwing (1980) Gina Wilson began her acclaimed career as a novelist for young adults. As she describes in a new preface to this reissue, the idea for the novel 'took a grip' on her such that she wrote without 'planning', inspired by the theme of a child's growing sense of intuition. 'A sensitive, mystery-tinged portrayal of social tensions... Cora Ravenwing, village scapegoat, is the first child whom narrator Becky Stokes meets when her family moves outside London in the mid-1950s; and her reflections deftly pick up the undercurrents of gossip, hostility, and social pretension that power the story of their year's troubled friendship.' Introduction The changing business environment, of global operations, mergers, decen tralization, increased competition, pressure on budgets etc. , has contributed to a positive change in the workplace. As this change continues, we must keep up to date and follow good standards, principles and practices. To help, we present the 'Paradigm of Project Management', which is based on a simple practical approach to managing projects. The method is flexible and may be applied to any project, although in this book we concentrate on the devel opment of systems. However, it also illustrates that the formation and management of project teams are changing in line with technology. As Dr Tom Peters says: 'Stability and predictability are gone forever . . . '. For example, project teams may work from home (telework), using email and groupware along 'electronic highways'. Therefore, instead of going through a pyramid of people to reach an executive, one can use the Internet, an intranet or an extranet and go direct. Another change is represented by the transient teams and Get -it -Done working approaches. An example of how a global project was managed is one in which Malaysia's International Shipping Corporation (MISC) implemented MISC*Net, a networking project to link online all of its shipping agents worldwide to its HQ in Malaysia. Project management was a key component in the solution prior to awarding the contract. IBM and MISC worked on the International Project Management System.

The essential lifesaver for students who want to master probability For students learning probability, its numerous applications, techniques, and methods can seem intimidating and overwhelming. That's where The Probability Lifesaver steps in. Designed to

serve as a complete stand-alone introduction to the subject or as a supplement for a course, this accessible and user-friendly study guide helps students comfortably navigate probability's terrain and achieve positive results. The Probability Lifesaver is based on a successful course that Steven Miller has taught at Brown University, Mount Holyoke College, and Williams College. With a relaxed and informal style, Miller presents the math with thorough reviews of prerequisite materials, worked-out problems of varying difficulty, and proofs. He explores a topic first to build intuition, and only after that does he dive into technical details. Coverage of topics is comprehensive, and materials are repeated for reinforcement—both in the guide and on the book's website. An appendix goes over proof techniques, and video lectures of the course are available online. Students using this book should have some familiarity with algebra and precalculus. The Probability Lifesaver not only enables students to survive probability but also to achieve mastery of the subject for use in future courses. A helpful introduction to probability or a perfect supplement for a course Numerous worked-out examples Lectures based on the chapters are available free online Intuition of problems emphasized first, then technical proofs given Appendixes review proof techniques Relaxed, conversational approach

This clear and lively introduction to probability theory concentrates on the results that are the most useful for applications, including combinatorial probability and Markov chains. Concise and focused, it is designed for a one-semester introductory course in probability for students who have some familiarity with basic calculus. Reflecting the author's philosophy that the best way to learn probability is to see it in action, there are more than 350 problems and 200 examples. The examples contain all the old standards such as the birthday problem and Monty Hall, but also include a number of applications not found in other books, from areas as broad ranging as genetics, sports, finance, and inventory management.

Study Guide and Intervention/Practice Workbook provides vocabulary, key concepts, additional worked out examples and exercises to help students who need additional instruction or who have been absent.

Geometry is an important part of Quantitative Aptitude Section of SSC CGL, CPO, CHSL, and other such competitive examinations. Advanced mathematics makes fifty to sixty percent part of the Mains examination of SSC CGL out of which thirty percent questions are based on Geometry. Also, as per a recent change observed in the trend of these examinations, the geometry questions now being asked are difficult to solve when compared to previous examinations. So, it becomes a must for all the SSC aspirants not to give this portion a cold shoulder. The ?The Cracker Practice Book for Geometry? covers the difficult new pattern questions under the name Challenger Practice Sets along with the previous year questions that are expected to be repeated in the upcoming examinations. In this book, we provide you all with detailed theories on Circles, Triangles, Quadrilaterals, and Polygons that are followed by practice exercises and previous year questions. It will help the students analyze what is being asked in these examinations so that they prepare accordingly.

The activities in this book were designed to provide students with practice in the skill areas necessary to master the concepts presented in a 2nd-level course in algebra. It reviews concepts in beginning algebra plus has exercises involving slope, intercepts, graphing linear inequalities, domain and range, graphing exponential functions, matrix operations, quadratic equations, trigonometry, radicals, roots, and vectors.

In 1988, on Stephen King's retirement JWT published 'The King Papers' a small collection of Stephen King's published writings spanning 1967-1985. They remain timelessly potentially valuable but are an almost unexploited gold mine. This book is comprised of a selection of 20-25 of Stephen King's most important articles, each one introduced by a known and respected practitioner who, in turn, describes the relevance of the particular original idea to the communications environment of today. The worth of this material is that, although the context in which the original papers were written is different, the principles themselves are appropriate to marketing communications in today's more complex media environment. The book will serve as a valuable reference book for today's practitioners, as well as a unique source of sophisticated, contemporary thinking.

Fleeing from the death of his girlfriend back on Earth, former philosophy major Adrian Ryan manages to find a measure of contentment by signing up for a job crafting dreams for convicts being transported to a far-off planet to work in the mines. Fate seems to smile upon him further when he meets a beautiful girl named Tanis while spending a month-long furlough upon Siluna, a planet a portion of the way to their destination, and falls in love again, reawakening in him, for the first time in years, the fires of passion. But his whole world is thrown into confusion one day when he receives a message from one of his shipmates, summoning him to a candid conversation in the ship's lounge, where he learns not only that he's been watched for years but also of a revolutionary plan to takeover the ship--and the part that he might play in it. So coaxed by Tanis not only into using the very technology whereby he creates dreams for the convicts in Cryogenic freezing but also into using it to further the revolutionary plan, Adrian throws away everything he knows and commits

Maths Problem Solving - Year 5 is the fifth book in the Maths Problem Solving series. The books have been written for teachers to use during the numeracy lesson. They cover the 'solving problem' objectives from the numeracy framework. This book contains three chapters; Making decisions, Reasoning about numbers or shapes and Problems involving 'real life', money or measures. The books are designed in such a way that each section has six stages of questions to be worked through. Every stage is split into three levels, for example 1a, 1b or 1c, based on achievement. Each corresponding question from these levels follow the same line of questioning, so that when the teacher talks about a certain question, the solution process is the same for each level but the complexity of the sum varies.

This literary study is an exploration and a celebration of a writer who for the last half century has been at the forefront of modern African writing. Since the publication of Things Fall Apart in 1958, Chinua Achebe has been credited with being the key progenitor of an African literary tradition and his five novels read as tracing the national narrative of Nigeria. Achebe depicts precolonial societies disturbed by British colonization, in the 1890s and the 1930s, the dog days of colonization in the 1950s, Independence in 1960 and the onset of neo-colonial problems of corruption and civil war and, in his final novel, Anthills of the Savannah (1987), the pervasive sense of postcolonial disenchantment. This study casts back over Achebe's writing career to assess his considerable contribution to postcolonial writing and criticism, including his Editorship of Heinemann's acclaimed African Writers Series which has shaped African literature for international audiences since 1962. They live in deep caves and sleep almost all the year, but when Christmas gets close they wake up and make things happen. That month the gnomes make Christmas presents and prepare a huge feast for everyone. People can't see them, but the animals can, and sometimes the animals can even help!
