This is the third book in the Seasonal Math Activities series to help teachers make math more interesting and even fun for their students. The hands-on activities help students learn and review important math concepts such as: measurement, addition and subtraction, estimation, skip counting, ordinal numbers and much more. Activity ideas include categorizing and counting jelly beans, counting flower petals, predicting and tracking weather, and lots of holiday fun. Several activities are based on popular children's literature. Each activity has a list of materials needed and clear, concise directions. Also provided are the skills students will learn or practice as they do the activity. Every creative idea in this book will change your students' attitude toward math from ho-hum to oh-boy!

Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice. Focussing its discussion within the context of mathematics education, it argues that while research-generated insights can have beneficial effects on learning and teaching, the question of how these effects are to be generated and sustained is far from evident. The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice. In the first part of the book, four teams of researchers use different methodologies while analysing the same corpus of data, collected in a South African mathematics classroom. In the second part, each of these teams makes a specific proposal about what can be done and how so that its research-generated insights have a tangible, beneficial impact on what is happening in mathematical classrooms. Combining two discourses – that of researchers speaking to one another, and that of researchers communicating their insights to those responsible for educational practice – the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education, educational research and classroom practices. This book will be key reading for postgraduates, researchers and academics in education and particularly in the areas of mathematics education, education research, teacher education and classroom practice. It will also appeal to teacher educators, practitioners and undergraduate students interested in educational research.
