As a teacher, what you want most is for your students to learn—to immerse themselves in rich and challenging content and leave your classroom better prepared for school and life. In English language arts and humanities, this includes developing the multifaceted reading, writing, thinking, and communication skills that constitute next generation literacy, including the ability to

- * Read complex text independently
- * Develop strong content knowledge through reading, writing, listening, and speaking
- * Tailor communication in response to different audiences, tasks, purposes, and disciplines
- * Comprehend text as well as critique it
- * Value evidence in arguments they read, hear, or develop
- * Use technology strategically and capably
- * Understand perspectives and cultures that differ from their own

But as a teacher, you also know how much is riding on THOSE TESTS—achievement tests from the national assessment consortia, the SAT and ACT, and independent state assessments. Is it possible to help students succeed on mandated tests without sacrificing your values, your creativity, and their education? Yes, it is possible. This book shows you how. This not a test-prep book. It is not about “drill and kill” practices that narrow learning so that students will pass an exam. Instead, authors Maureen Connolly and Vicky Giouroukakis present a lesson planning approach for the secondary classroom that generates test success as a byproduct of comprehensive literacy learning. After a comparative analysis of how current ELA assessments measure literacy, they model a backward design-based process for using these test items as a tool to create engaging and effective instruction. With 6 sample lessons, 42 instructional techniques, and tips for differentiation, this practical resource will empower you to help the students you love become capable, literate individuals who are also well-prepared to ace high-stakes tests.

Where is U.S. secondary-level science education heading today? That's the question that *The Essentials of Science, Grades 7-12* sets out to answer. Over the last century, U.S. science classes have consistently relied on lectures, textbooks, rote memorization, and lab demonstrations. But with the onset of NCLB-mandated science testing and increased concern over the United States' diminishing global stature in science and technology, public pressure is mounting to educate students for a deeper conceptual understanding of science. Through lively examples of classroom practice, interviews with award-winning science teachers and science education experts, and a wide-ranging look at research, readers will learn

- * How to make use of research within the cognitive sciences to foster critical thinking and deeper understanding.
- * How to use backward design to bring greater coherence to the curriculum.
- * Innovative, engaging ideas for implementing scientific inquiry in the classroom.

This open access book identifies the multiple ways that IEA studies of civic and citizenship education have contributed to national and international educational discourse, research, policymaking, and practice. The IEA International Civic and Citizenship Education Study (ICCS), first conducted in 2009, was followed by a second cycle in 2016. The project was linked to the earlier IEA Civic Education Study (CIVED 1999, 2000). IEA ICCS remains the only large-scale international study dedicated to formal and informal civic and citizenship education in school. It continues to make substantial contributions to understanding the nature of the acquired civic knowledge, attitudes, and participatory skills. It also discusses in-depth how a wide range of countries prepare their young people for citizenship in changing political, social, and economic circumstances. The next cycle of ICCS is planned for 2022. In this book, more than 20 national representatives and international scholars from Europe, Latin America, Asia, and North America assess how the processes and findings of the 2009 and 2016 cycles of ICCS and CIVED 1999/2000 have been used to improve nations' understanding of their students' civic knowledge, beliefs, attitudes, current civic-related behaviors, and intentions for future participation in a comparative context. There are also chapters summarizing the secondary analysis of those studies' results indicating their usefulness for educational improvement and reflecting on policy issues. The analyses and reflections in this book provide timely insight into international educational discourse, policy, practice, and research in an area of education that is becoming increasingly important for many societies.
