Different subjects appear in different windows, waves of light pass through each window uniquely and only once per instant of time. Different impressions in light pass through or reflect off the surface of each windows. There are different expressions on people's faces, different gestures or reactions to the fact that they are being photographed, if they are in fact aware that they are

being photographed, and different aspects of their awareness. Some subjects appear to be consciously turning away from the camera, others appear completely unaware of the camera's presence, others stare back through the graffitied windows, and others still into the black void of the lens. All subjects whether conscious of it or not, whether consenting or not are providing an impression composed in reflected light, of being, in that instant.

What Does it Take to Get Ahead Now—And Stay There? High performance has always required shrewd strategy and superb execution. These factors remain critical, especially given today's unprecedented business climate. But Rich Karlgaard—Forbes publisher, entrepreneur, investor, and board director—takes a surprising turn and argues that there is now a third element that's required for competitive advantage. It fosters innovation, it accelerates strategy and execution, and it cannot be copied or bought. It is found in a perhaps surprising place—your company's values. Karlgaard examined a variety of enduring companies and found that they have one thing in common; all have leveraged their deepest values alongside strategy and execution, allowing them to fuel growth as well as weather hard times. Karlgaard shares these stories and identifies the five key variables that make up every organization's "soft edge": Trust: Northwestern Mutual has built a $25 million dollar

revenue juggernaut on trust, the foundation of lasting success. Learn how to create an environment that engenders trust and propels high performance. Smarts: In most technical fields your formal education quickly becomes out of date. How do you keep up? Learn how the Mayo Clinic, Stanford University women's basketball team, and others stay on top by relentlessly pursuing an advantage through smarts. Teamwork: Since collaboration and innovation are a must in the global economy, effective teamwork is vital. Learn how global giant FedEx stays focused and how nimble Nest Labs relies on lean teams with cognitive diversity. Taste: Clever product design and integration are proxies for intelligence because they make customers feel smart. But taste goes further into deep emotional engagement. Specialized Bicycles calls it "the elusive spot between data truth and human truth." How can you consistently make products or services that trigger these emotional touch points? Story: Companies that achieve lasting success have an enduring and emotionally appealing story. What's your company's story? How do you tell it your way? Gain the ability to create a powerful narrative in a world where outsiders often exercise the louder voice.

Amy's jetting to the Holy Land this summer to vist her boyfriend Avi who's in the Israeli army. Two weeks at a military training base (her grandmother's idea) turns out to be pure hell ... and only gets worse when the team leader is Avi. Whether you are a university professor, researcher at a think tank, graduate student, or analyst at a private firm, chances are that at some point you have presented your work in front of an audience. Most of us approach this task by converting a written document into slides, but the result is often a text-heavy presentation saddled with bullet points, stock images, and graphs too complex for an audience to decipher—much less understand. Presenting is fundamentally different from writing, and with only a little more time, a little more effort, and a little more planning, you can communicate your work with force and clarity. Designed for presenters of scholarly or data-intensive content, Better Presentations details essential strategies for developing clear, sophisticated, and visually captivating presentations. Following three core principles—visualize, unify, and focus—Better Presentations

describes how to visualize data effectively, find and use images appropriately, choose sensible fonts and colors, edit text for powerful delivery, and restructure a written argument for maximum engagement and persuasion. With a range of clear examples for what to do (and what not to do), the practical package offered in Better Presentations shares the best techniques to display work and the best tactics for winning over audiences. It pushes presenters past the frustration and intimidation of the process to more effective, memorable, and persuasive presentations. At present the textile industry produces the majority of its 34

billion square yards of printed textile fabric by screen printing. However as we move into the digital age developments in digital printing of paper are being adapted more and more for the textile market. Inkjet textile printing is growing while growth in analog textile printing remains stagnant. As digital print technologies improve offering faster production and larger cost-effective print runs, digital printing will grow to become the technology that provides the majority of the world's printed textiles. This comprehensive introduction to the subject is broken into five sections. After two introductory chapters, it goes on to look in a number of detailed chapters at printer and print head technologies. The next section examines the printer software required for successful colour design and management. The digital printing colouration process is explored next, with chapters on substrate preparation, pigmented ink, aqueous inkjet ink, pre-treatment and printing on cationized cotton with reactive inks. The book is concluded with three chapters on the design and business aspect of digital printing. Digital printing of textiles contains fundamental technical explanations along with recent research, and is an invaluable guide for product developers, retailers, designers and academic researchers. Vilakazi's poetry, and A.C. Jordan's The Wrath of the Ancestors within the broader context of African cultural nationalisms in the early twentieth century African Atlantic World.
