The book "Drug Selectivity - An Evolving Concept in Medicinal Chemistry" provides a current overview and comprehensive compilation for medicinal chemists that discusses the effects of aiming for multiple targets on the entire drug development process. The result is a broad survey of current and future strategies for drug selectivity in medicinal chemistry with theoretical but also practical aspects. Different strategies are presented and evaluated, such as various design approaches, merged multiple ligands, discovery technologies and a broad range of successful examples of unselective drugs taken from all major disease areas. With its wide-ranging view of an emerging new paradigm in drug development, this handbook is of prime importance for every medicinal and pharmaceutical chemist.

Written by a multidisciplinary team of experts involved in the development of standards and guidelines for its management in the USA, UK, Europe and Asia, the book contains succinct and knowledgeable summaries of the management of thyroid cancer. Every chapter describes a different aspect of care, and provides clear and detailed information about caring for patients with this group of tumors. This is an invaluable reference to health care professionals, from primary to tertiary care, involved in the management of thyroid cancer such as clinical nurse specialists, clinical psychologists, family medicine practitioners, specialists in palliative care (especially for anaplastic thyroid cancers), geneticists and surgeons, endocrinologists, oncologists, pathologists, and radiologists.

Mathematics education research has blossomed into many different areas, which we can see in the programmes of the ICME conferences, as well as in the various survey articles in the Handbooks. However, all of these lines of research are trying to grapple with the complexity of the same process of learning mathematics. Although our knowledge of the process is through fragmentation of research more extensive and deeper there is a need to overcome this fragmentation and to see learning as one process with different aspects. To overcome this fragmentation, this book identifies six themes: (1) mathematics, culture and society, (2) the structure of mathematics and its influence on the learning process, (3) mathematics learning as a cognitive process, (4) mathematics learning as a social process, (5) affective conditions of the mathematics learning process, (6) new technologies and mathematics learning. This book is addressed to all researchers in mathematic education. It gives an orientation and overview on what is going on and what are the main results and questions what are important books or papers if further information is needed.

At a time of increasing globalisation, the concept of open and distance learning is being constantly redefined. New technologies have opened up new ways of understanding and participating in Learning. Distributed Learning offers a collection of perspectives from a social and cultural practice-based viewpoint, with contributions from leading international authors in the field. Key issues in this comprehensive text are: *the challenges of ICT to traditional teaching and learning practices *the value and relevance of 'activity theory' and 'communities of practice' in educational institutions and the workplace *perspectives on the relationship between globalisation and distributed learning, and the breakdown of distinctions between global and local contexts *issues of identity and community in designing courses for the virtual student *language and literacies in distributed learning contexts This book provides useful introductory reading, building a sound theoretical framework for practitioners interested in how distributed learning is shaping post-compulsory education.

Understanding Primary Physical Education goes further than any other textbook in exploring the development of physical education teaching at the primary and elementary level, drawing together important research from across the educational and sociological literature. The book goes beyond everyday teaching practice at an operational level to encourage students, trainee teachers and researchers to develop a critical understanding of policy, process and practice in primary physical education. By rooting everyday documents and everyday issues in a broader, connected educational and developmental landscape, this book challenges casual assumptions and encourages a better, more thoughtful teaching practice. It is an essential companion for any degree level course in primary physical education.

This book addresses how to assess and instruct students while also honoring their cultural and linguistic backgrounds. Many individuals want to support their multilingual learners but do not

have the language skills to work in a bilingual or dual-language setting. The chapters in this book examine assessment in classrooms where English is the language of instruction; yet, students are also encouraged to communicate in multiple languages. The thesis of this book revolves around the idea that linguistically diverse learners may engage in critical thinking in ways that we may not anticipate. Students who are learning in an additional language do not need to “catch up.” Assessment should instead measure the new ways that students are interacting with the world. This book helps you discover the many ways to help students develop as critically thinking readers, writers and speakers. There is a scarcity of research addressing literacy among linguistically diverse learners within math and science. The information contained in this book will hopefully advance a dialogue between teachers and linguistically diverse students as they read and write multiple genres together. This book also encourages teachers, family, and community members to come together to form supportive environments where best practices are fostered. Some of the questions addressed by this book: 1. How do I determine a student’s strengths and needs if he or she is not talking in class in any language? 2. Do I teach monolingual and multilingual learners to read in similar ways? 3. How can I support my students as they read math word problems? 4. What do students need to know about the structures of science texts? 5. How should we develop math and science literacy assessments? 6. Should I have specific language goals for students as speakers?

This book provides a broad account of various applied aspects of microbiology for quality and safety evaluations in food, water, soil, environment and pharmaceutical sciences. The work is timely, as the safety and quality of various commodities such as water and wastewater, food, pharmaceutical medications and medical devices are of paramount concern in developing countries globally for improved public health quality in areas ranging from food security to disease exposure. The book offers an introduction to basic concepts of biosafety and related microbiological practices and applies these methodologies to a multitude of disciplines in subject-focused chapters. Each chapter offers experiments and exercises pertaining to the specific area of interest in microbiological research, which will allow readers to apply the knowledge gained in a laboratory or classroom setting to see the microbiological methods discussed in practice. The book will be useful for industrialists, researchers, academics and undergraduate/graduate students of microbiology, biotechnology, botany and pharmaceutical sciences. The text aims to be a significant contribution in effectively guiding scientists, analysts, lab technicians and quality managers working with microbiology in industrial and commercial fields.

Making Research Matter is an original contribution to the growing field of work-based learning with a focus on research aimed at developing the practice of counselling and psychotherapy addressing the practice-research gap. Stephen Goss, Christine Stevens and their contributors explore the links between research and professional practice and show how this can impact on practice to make a genuine, demonstrable contribution to the development of therapeutic services, good practice and the understanding of psychological and social issues. The book is divided into two parts. Part one gives an account of the thinking, ethos and development of work-based learning. It explores the importance of the in-depth rigorous and reflexive inquiry skills needed to sustain research project work. Part two presents nine studies of work-based psychotherapy or counselling related research. Each account sets out the focus and motivation of the study and critically discusses how the research design was developed, the choice of methods employed, with an explanation of the outcomes. A vital part of each account is a review of how the research has been used to make changes and developments in the work setting. Making Research Matter provides insights into the lived experience of the practitioner-researcher, to stimulate the reader to generate their own ideas for research enquiry. It presents a range of proven, successful research projects, and shows how they have made a difference in the development of theory and practice which lead to positive change, better services and more informed practice. It will be an essential resource for psychotherapists, counsellors, social workers, and those involved in coaching and clinical psychology.
