This anthology discusses the converging operational issues of air base defense and counterinsurgency. It explores the diverse challenges associated with defending air assets and joint personnel in a counterinsurgency environment. The authors are primarily Air Force officers from security forces, intelligence, and the office of special investigations, but works are included from a US Air Force pilot and a Canadian air force officer. The authors examine lessons from Vietnam, Iraq, Afghanistan, and other conflicts as they relate to securing air bases and sustaining air operations in a high-threat counterinsurgency environment. The essays review the capabilities, doctrine, tactics, and training needed in base defense operations and recommend ways in which to build a strong, synchronized ground defense partnership with joint and combined forces. The authors offer recommendations on the development of combat leaders with the depth of knowledge, tactical and operational skill sets, and counterinsurgency mind set necessary to be effective in the modern asymmetric battlefield.

During the forty years of division, the Protestant and Catholic churches in Germany were the only organizations to retain strong ties and organizational structures: they embodied continuity in a country marked by discontinuity. As such, the churches were both expected to undergo smooth and rapid institutional consolidation and undertake an active role in the public realm of the new eastern German states in the 1990s. Yet critical voices were heard over the West German system of church-state relations and the public role it confers on religious organizations, and critics often expressed the idea that despite all their difficulties, something precious was lost in the collapse of the German democratic republic. Against this backdrop, the author delineates the conflicting conceptions of the Protestant and Catholic churches' public role and pays special attention to the East German model, or what is generally termed the "positive experiences of the GDR and the Wende."

Applied Hierarchical Modeling in Ecology: Analysis of Distribution, Abundance and Species Richness in R and BUGS, Volume Two: Dynamic and Advanced Models provides a synthesis of the state-of-the-art in hierarchical models for plant and animal distribution, also focusing on the complex and more advanced models currently available. The book explains all procedures in the context of hierarchical models that represent a unified approach to ecological research, thus taking the reader from design, through data collection, and into analyses using a very powerful way of synthesizing data. Makes ecological modeling accessible to people who are struggling to use complex or advanced modeling programs Synthesizes current ecological models and explains how they are inter-connected Contains numerous examples throughout the book, walking the reading through scenarios with both real and simulated data Provides an ideal resource for ecologists working in R software and in BUGS software for more flexible Bayesian analyses

The purpose of this study was to introduce the concept of Private Sector Financing (PSF) of military facilities instead of acquiring facilities via the Military Construction Process. Another goal was to provide project officers with answers to questions which will arise in the development of a PSF project. Specifically, this study examined three avenues of PSF presently authorized by Congressional law. These answers are presented in a quick reference guide, which was developed after an indepth analysis of the U.S. Statutes and interviews of those involved with PSF in the Department of Defense. Additionally, this research presents conclusions from military PSF projects to date and recommendations for future projects. Keywords: Privatization; Private sector financing; Military construction; Leasing; Contracting out; Outleasing; Military family housing. Theses. (edc).
