In Information Rules, authors Shapiro and Varian reveal that many classic economic concepts can provide the insight and understanding necessary to succeed in the information age. They argue that if managers seriously want to

develop effective strategies for competing in the new economy, they must understand the fundamental economics of information technology. Whether information takes the form of software code or recorded music, is published in a book or magazine, or even posted on a website, managers must know how to evaluate the consequences of pricing, protecting, and planning new versions of information products, services, and systems. The first book to distill the economics of information and networks into practical business strategies, *Information Rules* is a guide to the winning moves that can help business leaders navigate successfully through the tough decisions of the information economy. Immediately engage today's reader with *MACRO*, a unique modern presentation of macroeconomics that makes it easy to emphasize a solid microfoundations and real-business cycle approach in a presentation unlike any other intermediate macroeconomics text. Student engineered and faculty approved, Robert Barro's *MACRO* demonstrates an extraordinary command of growth, equilibrium, and business cycle theory with a focus on microfoundations. Captivating features range from rocker Bono's perspective on debt relief to the hidden costs of multiple shifts and overtime hours, all within a unified model of macroeconomics ideal for all majors. The distinctive, magazine-style pages of Barro's *MACRO* were inspired by feedback from students and refined by input from more than

seventy teaching professionals. The result is a brief paperback packed with current policy and data examples that reflect the author's extensive research in the field, as well as a suite of tightly integrated learning aids that accommodate the busy, diverse lifestyles of today's learners.
