"... a curriculum geared toward helping students gain skills in consciously regulating their actions, which in turn leads to increased control and problem solving abilities. Using a cognitive behavior approach, the curriculum's learning activities are designed to help students recognize when they are in different states called "zones," with each of four zones represented by a different color. In the activities, students also learn how to use strategies or tools to stay in a zone or move from one to another. Students explore calming techniques, cognitive strategies, and sensory supports so they will have a toolbox of methods to use to move between zones. To deepen students' understanding of how to self-regulate, the lessons set out to teach students these skills: how to read others' facial expressions and recognize a broader range of emotions, perspective about how others see and react to their behavior, insight into events that trigger their less regulated states, and when and how to use tools and problem solving skills. The curriculum's learning activities are presented in 18 lessons. To reinforce the concepts being taught, each lesson includes probing questions to discuss and instructions for one or more learning activities. Many lessons offer extension activities and ways to adapt the activity for individual student needs. The curriculum also includes worksheets, other handouts, and visuals to display and share. These can be photocopied from this book or printed from the accompanying CD."--Publisher's website.

Math activities for children in preschool through grade 5.

Our mission: to make math a fun part of kids' everyday lives. We all know it's wonderful to read bedtime stories to kids, but what about doing math? Many generations of Americans are uncomfortable with math and numbers, and too often we hear the phrase, "I'm just not good at math!" For decades, this attitude has trickled down from parents to their kids, and we now have a culture that finds math dry, intimidating, and just not cool. Bedtime Math wants to change all that. Inside this book, families will find fun, mischief-making math problems to tackle—math

that isn't just kid-friendly, but actually kid-appealing. With over 100 math riddles on topics from jalapeños and submarines to roller coasters and flamingos, this book bursts with math that looks nothing like school. And with three different levels of challenge (wee ones, little kids, and big kids), there's something for everyone. We can make numbers fun, and change the world, one Bedtime Math puzzle at a time.

A simple, visual approach to helping your child understand maths. Reduce the stress of studying maths and help your child with their homework, following this unique visual guide which will demystify the subject for everyone. Using clear, accessible pictures, diagrams and easy-to-follow step-by-steps - and covering everything from basic numeracy to more challenging subjects like statistics and algebra - you'll learn to approach even the most complex maths problems with confidence. Banish math anxiety and give students of all ages a clear roadmap to success Mathematical Mindsets provides practical strategies and activities to help teachers and parents show all children, even those who are convinced that they are bad at math, that they can enjoy and succeed in math. Jo Boaler—Stanford researcher, professor of math education, and expert on math learning—has studied why students don't like math and often fail in math classes. She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students. There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home. This book bridges that gap by turning research findings into practical activities and advice. Boaler translates Carol Dweck's concept of 'mindset' into math teaching and parenting strategies, showing how students can go from self-doubt to strong self-confidence, which is so important to math learning. Boaler reveals the steps that must be taken by schools and parents to improve math education for all. Mathematical Mindsets: Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. Their evasion and departure hinders math-related pathways and STEM career opportunities. Research has shown very clear methods to change this phenomena, but the information has been confined to research journals—until now. Mathematical Mindsets provides a proven, practical roadmap to mathematics success for any student at any age.

“Perfect for parents who want to understand the different methods to do arithmetic their children are learning—and why they are being taught that way.” —Keith Devlin, award-winning Stanford University mathematician “Can you help me with my math homework?” If this question fills you with fear (or even panic), then Old Dogs, New Math is here to help! Gone are the days when elementary school students simply memorized their times tables and struggled through long division. Today, students are expected not just to find the right answer, but also to use the best method—and to explain why it works. If your attempts to help your child are met with “That’s not how the teacher does it,” then it’s time to take the stress out of math homework. Old Dogs, New Math demystifies Common Core math for parents, including: Number lines,

place value and negative numbers Long multiplication and division Fractions, percentages and decimals Shapes, symmetry and angles Data analysis, probability and chance Complete with sample questions, examples of children's errors, and over 25 games and activities, Old Dogs, New Math will not only help you and your child subtract on a number line or multiply on a grid—but also help you discover math all around you, and have fun doing it!

Dissatisfied with its shape, a triangle keeps asking the local shapeshifter to add more lines and angles until it doesn't know which side is up.

Learning math can be a difficult task for any child, and for many adults. But learning to work with numbers need not be a dreaded experience; in fact, it can even be fun! Scott Flansburg, also known as "the Human Calculator," can help kids learn how to add, subtract, multiply and divide without the anxiety and frustration which often accompanies learning these skills. Using techniques that make numbers easy to work with and by demonstrating how math is essential to everyday life (contrary to the lament of a great percentage of students), Math Magic for Your Kids can help maximize your child's potential to understand math and enjoy it in the process. Flansburg has helped millions of "math phobic" adults with his popular lectures and best-selling book, Math Magic. Now he is reaching out to help America's "math phobic" kids. Math Magic for Your Kids makes it easy, even for those adults who suffer from math anxiety, to help the next generation get a leg up on essential math skills. The book is specifically designed to be combined with various mathematics curricula approved by the National Council of Teachers of Mathematics. Aimed at children aged 5 through 8, it can also benefit younger children who demonstrate a readiness for advanced number concepts and for older children who need reinforcement of basic math skills. For kids who struggle with simple math skills, Flansburg provides activities to "build a child's math sense" and help reinforce math concepts. Math Magic for Your Kids also contains information and anecdotes that relate math concepts to everyday situations, explains principles that facilitate learning in general, and provides shortcut methods as well as challenging puzzles and riddles to keep kids interested and involved. Games and exercises are designed to be executed independently or with parents' help.

"As a mother of three, this book's practical road map for helping our kids learn independently is invaluable. This should be a must-read for all parents." --Jenna Bush Hager Drawing on extensive experience as classroom teachers and the directors of their highly regarded tutoring business, Abby and Brian address a range of common frustrations caused by homework. They answer the most pressing questions on every parent's mind: How much should I get involved, what does constructive help look like, and how can I help my child work independently? Taking the Stress out of Homework breaks down for parents exactly when and how to offer homework support. Whether your child's stress point is executive functioning--the ability to plan or organize--or a subject-specific struggle in math, reading, writing, or standardized test-preparation, Abby and Brian use real-life stories to provide individualized, actionable advice. At the center of Abby and Brian's philosophy is encouraging students to break free of the "let's get to the answer already so that we can be done with the assignment" mindset; they focus instead on a process-oriented approach that fosters engagement and self-sufficiency both in and out of school. Filled with expert tips about how to build executive functioning and content skills, Abby and Brian share stress-reducing best practices so homework not only supports what kids are learning, but also helps build confidence and skills that last a lifetime.

Studying math is often a source of great anxiety for children and teenagers. It also proves troublesome for parents, as many are reminded of their own struggles with the subject and feel lost when trying to tackle it again years later in an effort to aid their offspring. Help Your Kids with Math is designed to reduce the stress of studying math for both children and adults. Using an appealing and uniquely accessible illustrative style, this book will show you what others only tell you, covering everything from basic arithmetic to more challenging subjects such as statistics, geometry, and algebra. Every aspect of math is explained in easily understandable language so that adults and kids can deal with the subject together. Tricky concepts are explored and examined step-by-step, so that even the most math-phobic individual will be able to approach complex problems with confidence. The first in an original new series of study aids that aims to demystify those subjects that seem tricky and incomprehensible, Math Survival provides invaluable guidance and easy explanations for all those desperate kids and parents who need to understand math and put it into practice.

How to build productive relationships in math education I wasn't taught this way. I can't help my child! These are common refrains from today's parents and guardians, who are often overwhelmed, confused, worried, and frustrated about how to best support their children with what they see as the "new math." The problem has been compounded by the shift to more distance learning in response to a global pandemic. Partnering With Parents in Elementary School Math provides educators with long overdue guidance on how to productively partner and communicate with families about their children's mathematics learning. It includes reproducible surveys, letters, and planning documents that can be used to improve the home-school relationship, which in turn helps students, parents, teachers, and education leaders alike. Readers will find guidance on how to:

- Understand and empathize with what fuels parents' anxieties and concerns
- Align as a school and set parents' expectations about what math instruction their children will experience and how it will help them
- Communicate clearly and productively with parents about their students' progress, strengths, and needs in math
- Run informative and fun family events
- support homework
- Coach parents to portray a productive disposition about math in front of their children

Educators, families, and students are best served when proactive, productive, and healthy relationships have been developed with each other and with the realities of today's math education. This guide shows how these relationships can be built.
