Author Bio Introduction So, you've tried out various workouts, weight loss programs, and gym rituals and things are working out all right, but you're not seeing results that satisfy you completely. That's exactly where a HIIT workout can help you. Cast aside the belief that a jog or brisk walk is a good enough daily dose of exercise for you, because sure, they help, but if you want to see real and sustained positive change with your body, a toned physique, and a slender figure, you need to step up the game to a whole new level. The most fundamental problem when it comes to weight loss, working out, and seeing positive change in our bodies, is that we often doubt ourselves. We hesitate or give up too early before we are able to notice the benefits that exercise can have on our lives. You see, exercise isn't just about shaping your body. It's a workout that affects your physical, emotional, and mental wellbeing. Without regular exercise and without looking after our physical health, we may as well kiss all other forms of health goodbye. Exercise is proven to be a truly powerful force in terms of fighting off the symptoms and onset of depression. Working out can

have this beneficial effect on your brain by encouraging the release of serotonin, a chemical that can lift our mood and feelings of self-appreciation and confidence. It is this chemical that forms the basis of our self-esteem. Regular exercise and working out thoroughly, on a daily basis, will not only whip your body into shape and mold fatty tissue into lean muscle, but it also reduces your risk of developing a manner of nasty health problems in the future. You're probably already aware of the growing obesity and heart disease crisis. The simple fact is that both of these health complications can be fought off with the successful and determined implementation of regular exercise and fitness training. With HIIT workouts in particular, your heart and circulatory system are given a real run for their money. You will be strengthening your vital organ and improving your heart's ability to cope with stress and pressure – both in a physical and emotional sense. Now of course, working through a HIIT workout isn't a walk in the park. It takes real strength, persistence, and resilience and is certainly not for the faint hearted. If you're up for a real challenge, in terms of fitness and working out, then you're certainly in the right place. This book will provide a guide that walks through the basics of what a HIIT workout is, the benefits in terms of physical and mental health, the risks and precautions, and a number of helpful tips when

undergoing a HIIT workout. This book will also present a number of simple and quick HIIT workouts and exercise activities that can be carried out at home or in thy gym. So, if you're ready to step up your game and head straight down the path to a stronger, leaner, and healthier body – read on. This is the beginning of crafting the body that you're striving for, the reflection in the mirror that will make you proud, confident, and even more optimistic about your health than ever before. It all starts here and it all starts now.

Do you ever feel like a hamster, spinning on a wheel in an endless loop and getting nowhere when it comes to your health and fitness? Are you working out regularly and cutting calories but seeing no real improvements? Does it feel like you will never lose those last 10 or 20 pounds? Or do you feel as if you simply don't have the time required to lose the fat and get into shape? Imagine if you could have the blueprint for the most efficient form of exercise to keep your body healthy and fit and an eating plan to satisfy hunger, taste, and health. Well, now you can. The best part? It will only require 15 minutes of exercise, twice a week, paired with a controlled-carb diet, and on the average, you will lose 10 pounds of fat within five weeks. It's hard to believe, but it works—and 15 Minutes to Fitness:Dr. Ben's SMaRT plan for total Fitness will not only show you how to do it but also explain why it works. If this sounds like

just another “new exercise secret,” please be assured that it is most certainly not. The foundation of this program is based on years of study, observation, and practice, and it has delivered real, measurable results in the overwhelming majority of those who have tried it. Dr. Vincent “Ben” Bocchicchio has spent the last 40 years in the fitness and health field, and as he approaches 70, people are still shocked to hear that he only spends 14 minutes twice a week on working out. But it’s true. With only 7 percent body fat, he is often asked what the secret is and if there's a “magic bullet.” The answer would be that the magic bullet is knowledge. And now with this book you will understand why genetically our bodies require simple and limited exercise exposure and how you can follow this optimal pattern yourself. The fact is that as humans we are hard-wired to exercise our bodies in very specific ways to reap the highest level of health benefits. I will provide the simple scientific argument for why my combination of high intensity exercise and controlled carbohydrate eating is the most effective means for burning fat, so that you can better understand exactly why this works. Exercise and diet are the two most powerful tools available for attaining high levels of health and function, and 15 Minutes to Fitness will show you just how little it actually takes to achieve a maximum response. The popularity of high-intensity interval training

Finally, the solution to the #1 reason we don't exercise: time. Everyone has one minute. A decade ago, Martin Gibala was a young researcher in the field of exercise physiology—with little time to exercise. That critical point in his career launched a passion for high-intensity

interval training (HIIT), allowing him to stay in shape with just a few minutes of hard effort. It also prompted Gibala to conduct experiments that helped launch the exploding science of ultralow-volume exercise. Now that he's the worldwide guru of the science of time-efficient workouts, Gibala's first book answers the ultimate question: How low can you go? Gibala's fascinating quest for the answer makes exercise experts of us all. His work demonstrates that very short, intense bursts of exercise may be the most potent form of workout available. Gibala busts myths ("it's only for really fit people"), explains astonishing science ("intensity trumps duration"), lays out time-saving life hacks ("exercise snacking"), and describes the fascinating health-promoting value of HIIT (for preventing and reversing disease). Gibala's latest study found that sedentary people derived the fitness benefits of 150 minutes of traditional endurance training with an interval protocol that involved 80 percent less time and just three minutes of hard exercise per week. Including the eight best basic interval workouts as well as four microworkouts customized for individual needs and preferences (you may not quite want to go all out every time), *The One-Minute Workout* solves the number-one reason we don't exercise: lack of time. Because everyone has one minute.

High Intensity Interval Training HIIT is for Dummies This is real weight loss motivation here folks. If you are someone who is looking to find your fitness and get on the road to better overall health, then this is an absolute must read before you decide to dive into any type of workout plan or program. High Intensity Interval Training, or HIIT for short sure does sound cool and exciting am I right? But is HIIT the optimal choice for everyone when it comes to finding their solution for burning off fat? This is why I wanted to write this book. I know that out in the real world where I choose to live, not everyone is healthy enough to even be contemplating adding in HIIT to their arsenal of workout tools when it comes to fat loss. There are so many factors that come into play when it comes to a persons body's ability to burn fat, that to just think that adding in a fresh new acronym to your workout routine will be like magic and

make the body fat disappear is ridiculous and only setting a person up for ultimate failure. High Intensity Interval Training the FAD is just another marketing ploy that is hyped up to once again dupe the average everyday bandwagon jumper into believing that this acronym is somehow a cut above all of the rest of the other acronyms. So many people have been utilizing HIIT way before they even invented the hyped up fad, and have benefited from it tremendously. This is because these people fully understand how to utilize High Intensity into their training, and are also fit and healthy enough to reap its rewards. This is very serious business here. High Intensity anything is not something to just be taking lightly. A lot of people tend to get goo goo eyed over a cool phrase or acronym like High Intensity Interval Training and HIIT and forget what the actual meaning of it really is? Seriously, are you fit enough, to even be doing high intensity anything? Do you understand that it takes fuel in order to burn fuel, and a high intensity style of training will require you to more than likely take in more fuel than you are currently taking in. Not only that, but you must know what fuel your own body needs to thrive on, and what fuel your body will need to recover from HIGH INTENSITY WORKOUTS. So many people get fixated on a fad that they tend to overlook all of the things that it actually takes in order to make a workout routine or plan do what it is supposed to do. And that is help YOU get healthier, not break your body down. When you read something that I have written you are getting a true honest opinion based on my own experiences and views. report ok. I utilize HIIT or whatever you want to call it myself personally and have for decades actually. I get a tremendous benefit from it as do so many others. I said I utilize it myself. I don't make a profit pushing the fad onto others who are in no way shape or form ready to be utilizing HIIT themselves. There is a big difference here, and I hope that you fully understand what I just said. I invite you to join me on yet another conversation. If you have never joined in on a conversation with me then just prepare to not be spoon fed anything, and don't expect to read a Wikipedia copy and paste job. I look forward to conversing with you all, and I will see you on the other side! Carpe diem Dexter

and lose fat, at the same time. Unfortunately, very few deliver. High Intensity Functional Training is a new and exciting type of training method that does deliver. With this approach, you can gain muscle, lose fat, boost your fitness, and even improve your health, all at the same time! High Intensity Functional Training is similar to high intensity interval training, but far better. Like high intensity interval training, it uses short periods of hard work, with rests in between, for a couple of workouts each week. Unlike high intensity interval training, it makes use of resistance training equipment, especially new tools like battling ropes, kettlebells, and weighted sleds for pushing or towing. This gives it a big advantage over traditional cardio machines, enabling much greater gains in muscle size, and greater losses in body fat. Even better, High Intensity Functional Training is a very time-efficient form of exercise for fat loss. With only a few workouts a week, you will achieve remarkable results. Researchers have suggested that the large energy deficit it produces might be caused by a range of mechanisms on top of simply "burning calories" while you are exercising. These include excess post-exercise energy consumption (EPOC), increases in muscle size leading to gains in resting metabolic rate, reduced appetite, and improved exercise enjoyment, which leads to greater consistency. What is more, you can structure your High Intensity Functional Training workouts to increase enjoyment and minimise muscle soreness by performing exercises with no lowering phase (such as sled pushes). This makes your workouts even easier to perform regularly, and with less discomfort.
